## Automated Reset Management Tool

ARMT is the Army portal for management and oversight of the Reset process, from initial creation of a unit Reset plan through final completion of required maintenance at sustainment or field level Reset locations.

## How Does ARMT Benefit the Warfighter?

- Unit Reset plans are claimed and executed for disposition
- Automated PBUSE feeds allow ARMT to capture equipment directly into Unit Reset plans
- Enables near elimination of manual management of Reset equipment data
- Enforces standardization within the Reset disposition request process
- Allows for oversight and real-time status on equipment pending disposition

## ARMT Key Features

- Unit Reset Planner - Management tool that uses a direct feed from the unit's PBUSE to enable the Warfighter to claim, edit, and execute Reset plans to the Life Cycle Management Commands (LCMC) for disposition instructions
- Reset Disposition Request Tools - Built in capabilities that work in coordination with the Unit Reset Planner to allow LCMCs and the Army Sustainment Command to manage the process of providing disposition instructions on unit equipment
- Worksheet - Oversight tools which enable Warfighters and key leaders real-time visibility of unit Reset plans as well as status on any equipment with disposition pending or completed

Unclassified

LCMC personnel provide disposition instructions back to the unit using the Unit Reset Equipment Disposition.

Field Reset Disposition Provider (ASC) - LSE Level: The LSE coordinates with LCMC personnel to provide source of repair. These are forwarded to the AFSB for verification.

Field Reset Disposition Provider (ASC) - AFSB Level: The AFSB verifies source of repair for Field Reset Plans and this information is provided back to the unit.

LIW Users can view Army's published version of the Reset Equipment List that includes Automatic Reset Induction, Intensively Managed Items, and medical equipment.

Army can view equipment Reset status by unit or commodity using ARMT Worksheets.
