HEADQUARTERS, DEPARTMENT OF THE ARMY

CHANGE 1 – 1 APRIL 2016

30 JUNE 2004

WARNING SUMMARY

This warning summary contains general safety warnings and hazardous materials warnings that must be understood and applied during operation of this equipment. Failure to observe these precautions could result in serious injury or death to personnel. Also included are explanations of safety and hazardous materials icons used within this technical manual.

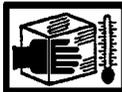

EXPLANATION OF SAFETY WARNING ICONS

BIOLOGICAL - abstract symbol bug shows that a material may contain bacteria or viruses that present a danger to life or health.

CHEMICAL - drops of liquid on hand shows that the material will cause burns or irritation to human skin or tissue.

CRYOGENIC - hand in block of ice shows that the material is extremely cold and can injure human skin or tissue.

ELECTRICAL - electrical wire to arm with electricity symbol running through human body shows that shock hazard is present.

EXPLOSION - rapidly expanding symbol shows that the material may explode if subjected to high temperatures, sources of ignition or high pressure.

EYE PROTECTION - person with goggles shows that the material will injure the eyes.

FALLING PARTS - arrow bouncing off human shoulder and head shows that falling parts present a danger to life or limb.

FIRE - flame shows that a material may ignite and cause burns.

HEAVY OBJECT - human figure stooping over heavy object shows physical injury potential from improper lifting technique.

HEAVY PARTS - heavy object on human figure shows that heavy parts present a danger to life or limb.

HOT AREA - hand over object radiating heat shows that part is hot and can burn.

TM 10-1670-299-20&P

POISON - skull and crossbones shows that a material is poisonous or is a danger to life.

SHARP OBJECT - pointed object in hand shows that a sharp object presents a danger to limb.

SLICK FLOOR - wavy line on floor with legs prone shows that slick floor presents a danger for falling.

VAPOR - human figure in a cloud shows that material vapors present a danger to life or health.

GENERAL SAFETY WARNINGS DESCRIPTION

WARNING

The lowering line retainer/stow pocket must have the hook and pile closures on both ends of the pocket. Failure to insure that the retainer ends are securely closed could result in premature lowering line release, causing serious injury or death.

WARNING

Death could result if inspections are not performed as specified in this manual. Perform all inspections as specified.

WARNING

Exercise extreme care when using petroleum products to destroy equipment by fire, as these materials are highly flammable. Improper handling may cause injury to personnel.

WARNING

Failure to detect areas of damage may result in malfunction of the parachute and injury or loss of life to personnel.

WARNING

For First Aid treatment, refer to FM 4-25.11.

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

*TM 10-1670-299-20&P, 30 June 2004, is changed as follows:

1. File this sheet in front of the manual for reference.
2. This change includes new items, the large and small Modular Airborne Weapons Cases. In addition, the following items are obsolete and have been deleted: 5-foot Standard Static Line Extension; M-1950 (Cotton) Parachutist's Individual Weapon Case; and the Parachutist's Weapon & Individual Equipment Case. Note also that the Dragon Missile Jump Pack has been renamed the Parachutist Jump Pack.
3. A vertical bar in the outer margin of the page indicates information that is new or changed. A vertical bar appears to the left of the title block in new or completely changed work packages.
4. Add the change pages to your manual as directed on the following page.

ARMY *TM 10-1670-299-20&P
AIR FORCE T.O. 14D1-2-470-2

REPORTING ERRORS AND RECOMMENDING IMPROVEMENTS

You can help improve this manual. If you find any mistakes, or if you know of a way to improve the procedures, please let us know. Reports, as applicable by the requiring service, should be submitted as follows:

Army (A) - The preferred method is to submit your DA Form 2028 (Recommended Changes to Publications and Blank Forms) through the Internet on the TACOM Unique Logistics Support Applications (TULSA) Web site. The Internet address is <https://tulsa.tacom.army.mil>. Access to all applications requires CAC authentication, and you must complete the Access Request form the first time you use it. The DA Form 2028 is located under the TULSA Applications on the left-hand navigation bar. Fill out the form and click on SUBMIT. Using this form on the TULSA Web site will enable us to respond more quickly to your comments and to better manage the DA Form 2028 program. You may also mail, e-mail, or fax your comments or DA Form 2028 directly to the U.S. Army TACOM Life Cycle Management Command. The postal mail address is U.S. Army TACOM Life Cycle Management Command, ATTN: AMSTA-LCL-MPP / TECH PUBS, MS 727, 6501 E. 11 Mile Road, Warren, MI 48397-5000. The e-mail address is tacomlcmc.daform2028@us.army.mil. The fax number is DSN 786-1856 or Commercial (586) 282-1856. A reply will be furnished to you.

CURRENT AS OF 27 DECEMBER 2013

DISTRIBUTION STATEMENT A – Approved for public release. Distribution is unlimited.

*This manual supersedes TM 10-1670-299-20&P, 15 September 1995.

REPORTING ERRORS AND RECOMMENDING IMPROVEMENTS (CONTINUED)

Marine Corps (MC) - Submit notice of discrepancies or suggested changes on a NAVMC 10772. The NAVMC may be submitted using either of the following:

The preferred method of submittal is using <https://portal.logcom.usmc.mil/sites/pubs/default.aspx>. Problems or questions regarding the NAVMC 10772 program should be reported by calling DSN 567-7628 or DSN 567-5017 (Commercial number is (229) 639-7628 or (229) 639-5017).

The alternate method of submittal does not require a Common Access Card (CAC) to access the form. Click on <http://navalforms.daps.dla.mil/web/public/forms>, select the "Keyword Search" button, enter "10772" in the Search Criteria Box. Under "type" click on download page button. Click on PDF icon. Enter user data in the appropriate fields. Must have users contact information block filled with Unit address and telephone number. Click on the 'Envelope' icon in the tool bar. Select "Send Copy," click on "OK". When the PDF document is created, an Outlook Email screen will open with the .PDF as an attachment. On the TO: line type SMB.LOG.Tech.Pubs.fct@usmc.mil. In the body of the email, type any additional information you wish to provide. Click "SEND".

A reply will be furnished to you

Navy (N) - By letter or NAVSEA 4160/1 (Rev. 9-2010) directly to Commander, CODE 310 TMDERs, NAVSURFWARCENDIV NSDSA, 4363 Missile Way BLDG 1389, Port Hueneme, CA 93043-4307. You may submit TMDERs online via the Internet at <https://nsdsa.nmci.navy.mil>. All feedback comments shall be thoroughly investigated and originators will be advised of action resulting there from.

Air Force (F) - Reports by U.S. Air Force units should be submitted on AFTO Form 22 (Technical Order Publication Improvement Report and Reply). An information copy of the prepared AFTO Form 22 shall be e-mailed to: robins.ce.afto22@robins.af.mil. Other requests for this document shall be referred to 406 CMS/GULAC, Robins AFB, GA 31098-1640. Questions concerning technical content shall be referred to WR-ALC/GRVCED.

A reply will be furnished to you.

HOW TO USE THIS MANUAL

This Technical Manual contains General Information, Unit Maintenance Instructions, Preventive Maintenance Checks and Services (PMCS), Troubleshooting, and Maintenance Information for the Ancillary Equipment For: Personnel Parachute Systems.

Chapter 1 contains introductory information on the Ancillary Equipment For: Personnel Parachute Systems and any associated equipment as well as a Location and Description of Major Components. Chapter 2 contains service upon receipt, initial receipt, receipt of used parachute assembly, and preventative maintenance checks and services information and instructions. Chapter 2 also contains maintenance procedures authorized at the unit level. Chapter 3 contains references, expendable durable items list, maintenance allocation chart, repair parts and special tolls list, national stock number index, part number index, and illustrated list of manufactured items. Rear matter consists of alphabetical index, DA Form 2028, authentication page, and back cover.

Manual Organization and Page Numbering System. The Manual is divided into three major chapters that detail the topics mentioned above. Within each chapter are work packages covering a wide range of topics. Each work package is numbered sequentially starting at page 1. The work package has its own page numbering scheme and is independent of the page numbering used by other work packages. Every work package has an even number of pages so that it does not interfere with any other work package. Each page of a work package has a page number of the form XXXX YY-ZZ where “XXXX” is the work package number (e.g. 0010 is work package 10). “YY” is a number that allows for a work package to be inserted between two existing work packages without disturbing the remainder of the TM (e.g. WP 0010 01 would fall between WP 0010 and WP 0011). “ZZ” represents the number of the page within that work package. A page number such as 0010 00-1/(2 Blank) means that page 1 contains information but page 2 of that work package has been intentionally left blank. A page number such as 0010 00-(1 Blank)/2 means that page 1 of that work package has been intentionally left blank but page 2 contains information.

Illustrations. Illustrations for procedures in this manual always follow the procedure. For example, if given a procedural instruction such as “1. Locate the main canopy (1).”, the (1) references the photo or illustration immediately *following* the procedure.

Finding Information. The Table of Contents permits the reader to find information in the manual quickly. The reader should start here first when looking for a specific topic. The Table of Contents lists the topics contained within each chapter and the work package sequence number where it can be found.

Example: If the reader were looking for instructions on “The Modular Airborne Weapons Case,” which in this manual is a Unit Maintenance topic, the Table of Contents indicates that Unit Maintenance information can be found in Chapter 2. Scanning down the listings for Chapter 2, “Service Upon Receipt” information can be found in WP 0004 00 (i.e., Work Package 4).

An Alphabetical Index can be found at the back of the manual. It lists specific topics with the corresponding work package.

UNIT MAINTENANCE
ANCILLARY EQUIPMENT FOR PERSONNEL PARACHUTE SYSTEMS
GENERAL INFORMATION

SCOPE

This manual contains an equipment description, operating instructions and maintenance procedures for Ancillary Equipment for Personnel Parachute Systems. This manual also provides a Repair Parts and Special Tools List, located in WP 0035 00 through WP 0049 00.

Purpose of Equipment. The Ancillary Equipment for Personnel Parachute Systems provides a capability to safely deliver an airborne soldier, and individual equipment, from an aircraft in flight, for a vertical assault on an enemy.

MAINTENANCE FORMS AND PROCEDURES

Department of the Army forms and procedures used for Ancillary Equipment for equipment maintenance shall be those prescribed by DA PAM 738-750, The Army Maintenance Management System (TAMMS). Maintenance forms and records used by Marine Corps personnel are prescribed by TM 4700-15/1.

REPORTING EQUIPMENT IMPROVEMENT RECOMMENDATIONS (EIR)

If your equipment needs improvement, let us know. Send us an EIR. You, the user, are the only one who can tell us what you do not like about your equipment. Let us know why you do not like the design or performance.

All non-Aviation/Missile EIRs and PQDRs must be submitted through the Product Data Reporting and Evaluation Program (PDREP) Web site. The PDREP site is: <https://www.pdrep.csd.disa.mil/>.

If you do not have internet access, you may submit your information using an SF 368 (Product Quality Deficiency Report). You can send your SF 368 using email, regular mail, or fax using the addresses/fax numbers specified in DA PAM 750-8, The Army Maintenance Management System (TAMMS) Users Manual. We will send you a reply.

CORROSION PREVENTION AND CONTROL

Corrosion Prevention and Control (CPC) of U.S. Army materiel is a continuing concern. It is important that any corrosion problems with the Ancillary Equipment for Personnel Parachute Systems be reported so that the problem can be corrected and improvements made to prevent the problem in future items. While corrosion is typically associated with rusting of metals, it can also include deterioration of other materials, such as rubber and plastic. Unusual cracking, softening, swelling or breaking of these materials may be considered a corrosion problem. If a corrosion problem is identified, it can be reported using a Standard Form 368 Product Quality Deficiency Report. Using key words such as "corrosion," "rust," "deterioration," or "cracking" will assure that the information is identified as a CPC problem. This form should be submitted to the address specified in DA PAM 738-750, Functional Users Manual for the Army Maintenance Management System (TAMMS).

DESTRUCTION OR ARMY MATERIEL TO PREVENT ENEMY USE**GENERAL INFORMATION:**

Objective. Methods of destruction used to inflict damage on air delivery equipment should make it impossible to restore equipment to a usable-condition in a combat zone, by either repair or cannibalization.

Authority. Destruction of air delivery equipment that is in imminent danger of capture by an enemy is a command decision that must be made by a battalion or higher command, or the equivalent.

Implementation plan. All units that possess air delivery equipment should have a plan for the implementation of destruction procedures.

Training. All personnel who use or perform such functions as rigging, packing, maintenance, or storage of air delivery equipment, should receive through training on air delivery equipment destruction procedures and methods. The destruction methods demonstrated during training should be simulated. Upon completion of training, all applicable personnel should be thoroughly familiar with air delivery equipment destruction methods and be capable of performing destruction without immediate reference to any publication.

SPECIFIC METHODS:

Specific methods of destroying Army material to prevent enemy use shall be by mechanical means, fire or by use of natural surroundings.

Destruction by Mechanical Means. Air delivery equipment metal assemblies, parts, and packing aids shall be destroyed using hammers, bolt cutters, files, hacksaws, drills, screwdrivers, crowbars, or other similar devices used to smash, break, bend or cut.

**WARNING**

Exercise extreme care when using petroleum products to destroy equipment by fire, as these materials are highly flammable. Improper handling may cause injury to personnel.

Destruction by Fire. Items that can be destroyed by fire shall be burned. The destruction of equipment by use of fire is an effective method of destroying low-melting-point metal items (e.g., side rails, threaded portions of nuts and bolts, and platforms). However mechanical destruction should be completed first, whenever possible, before initiating destruction by fire. When items to be destroyed are made of metal, textile materials (or some comparable low combustible material) should be packed under and around the items, then soaked with a flammable petroleum product and ignited. Proper concentration of equipment that is suitable for burning will provide a hotter and more destructive fire.

Destruction by Use of Natural Surroundings. Small vital parts of assemblies, that are easily accessible, may be disposed of as follows: disposal or denial of equipment to an enemy may be accomplished through the use of natural surroundings. Accessible vital parts of assemblies may be removed and scattered through dense foliage, buried in dirt or sand, or thrown into a lake, stream, or other body of water. Total submersion of equipment in a body of water will provide water damage as well as concealment. Salt water will inflict extensive damage to air delivery equipment.

PREPARATION FOR STORAGE AND SHIPMENT

For storage and shipment, refer to TM 10-1670-201-23/T.O. 13C-1-41/NAVAIR 13-1-17, WP 0030 00 and WP 0031 00 of this manual.

WARRANTY INFORMATION

Ancillary Equipment for Personnel Parachute Systems do not contain warranty provisions. ■

OFFICIAL NOMENCLATURE AND CROSS REFERENCE

The following lists cross-reference, common names used throughout this manual to official nomenclature.

COMMON NAME	OFFICIAL NOMENCLATURE
AT4-JP	Pack, Assembly, AT4
Backstrap	Backstrap, Harness
Drop Bag	Drop Bag, Parachute
Harness	Harness, Single Point Release
Line	Line, Lowering
Parachutist Pack	Jump Pack, Parachutist
SCUBA Set	Accessory Set, SCUBA
Stinger Pack	Jump Pack, Stinger Missile
Weapons Case	Case, Parachutist's, Individual Weapon, M-1950
Weapons Case or MAWC	Modular Airborne Weapons Case (Small or Large)

SAFETY, CARE AND HANDLING

The following subparagraphs summarize the safety, care and handling requirements for Ancillary Equipment for Personnel Troop Parachute Systems.

Safety. Use care in handling Ancillary Equipment for Personnel Parachute Systems as exposed metal parts could cause painful injuries.

Care and Handling. Every effort shall be made to protect the equipment from weather elements, dust, dirt, oil, grease, and acid. When available, an environmentally controlled building should be used to store Ancillary Equipment for Personnel Troop Parachute Systems. Equipment shall be stored in a dry, well-ventilated location and protected from pilferage, dampness, fire, dirt, insects, rodents, and direct sunlight.

COMMON TOOLS AND EQUIPMENT

For authorized common tools and equipment, refer to the Modified Table of Organization and Equipment (MTOE) applicable to your unit.

SPECIAL TOOLS, TEST EQUIPMENT AND DIAGNOSTIC EQUIPMENT (TMDE), AND SUPPORT EQUIPMENT

Special tools, TMDE and support equipment are not required.

REPAIR PARTS AND SPECIAL TOOLS LIST (RPSTL)

Repair parts are listed and illustrated in WP 0035 00 through WP 0049 00 of this manual.

WARNINGS, CAUTIONS AND NOTES

Be alert and note **WARNINGS**, **CAUTIONS**, and **NOTES**. These provide for safe operation of the equipment, and protect you and your equipment from injury and damage.

END OF WORK PACKAGE

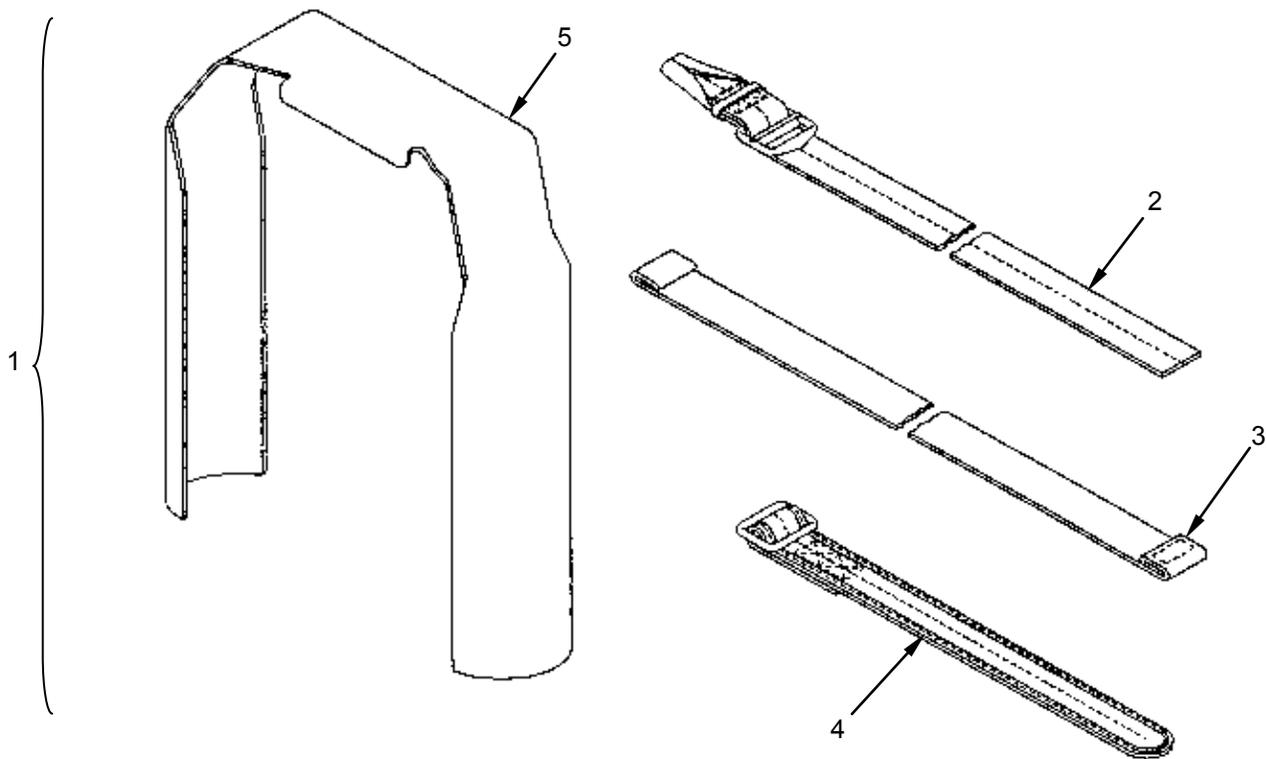

UNIT MAINTENANCE
ANCILLARY EQUIPMENT FOR PERSONNEL PARACHUTE SYSTEMS
EQUIPMENT DESCRIPTION AND DATA

Equipment Characteristics, Capabilities, and Features. Ancillary equipment components for Personnel Parachute Systems are designed to facilitate the adaptation of various types of personal equipment containers and weapons cases. Their use is dictated by the nature and equipment requirements of each particular mission. There are no unique maintenance related requirements or characteristics. Ancillary equipment components are constructed of various types of fabric materials and require only the kind of maintenance normally associated with personal equipment items.

Location and description of major components. Equipment location information shall be prepared including external and internal views of the equipment used to show general features and all major components. This information shall not duplicate information contained in the equipment data requirements and the equipment characteristics, capabilities, and features.

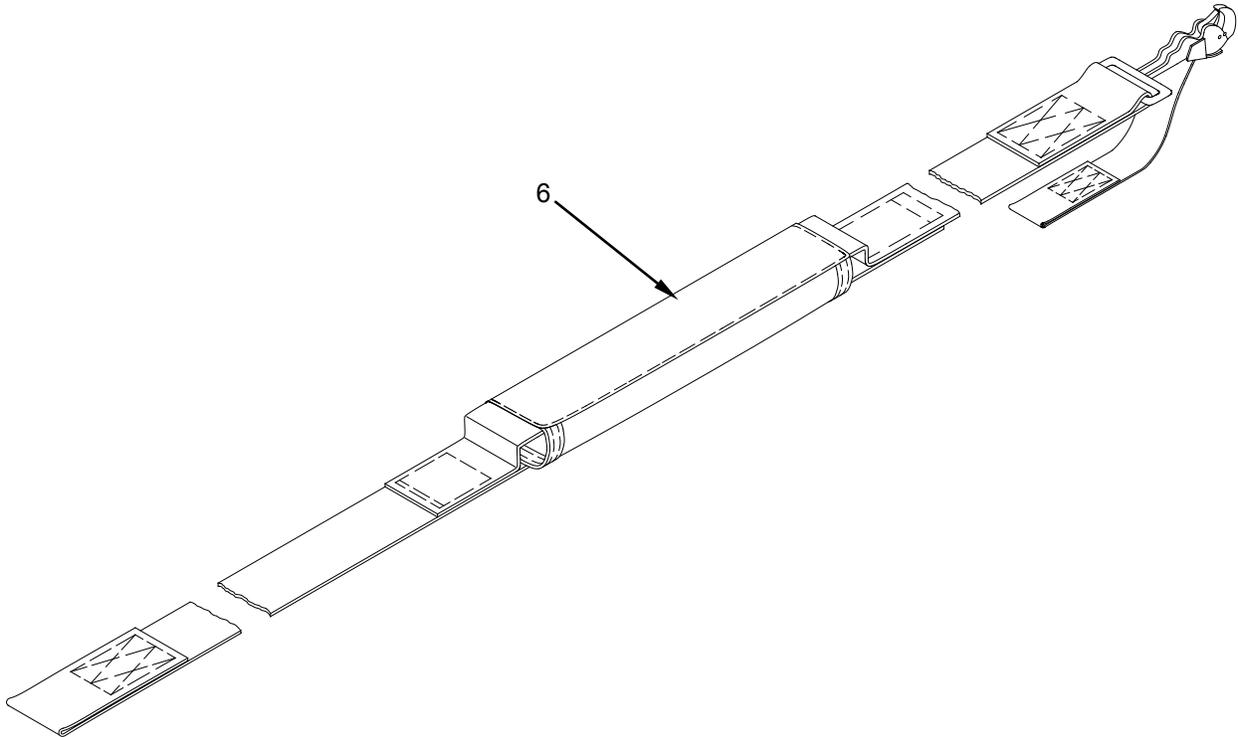

Accessory Set, SCUBA (1).

1. **Support Strap (2).** Two support straps (2) are used with the SCUBA set. They are constructed of Type III Nylon Webbing with a quick fit adapter at one end and approximately 66-inches long.
2. **Backstrap, Harness (3).** The backstrap harness (3) is approximately 96-inches long and constructed of Type XIII Nylon Webbing.
3. **Strap, Waistband Extension (4).** The waistband extension strap (4) is constructed of Type VIII Nylon Webbing that is enclosed in Type III Nylon Duck Cloth. The Strap is 24.5-inches long, with one end is rounded, and an adjuster attached to the other end. Type III Nylon Tape is sewn to one side of the strap.
4. **Shield (5).** The shield is a U-shaped metal plate (5) installed over the SCUBA tank regulators to prevent the static line from becoming entangled in the regulator valves.

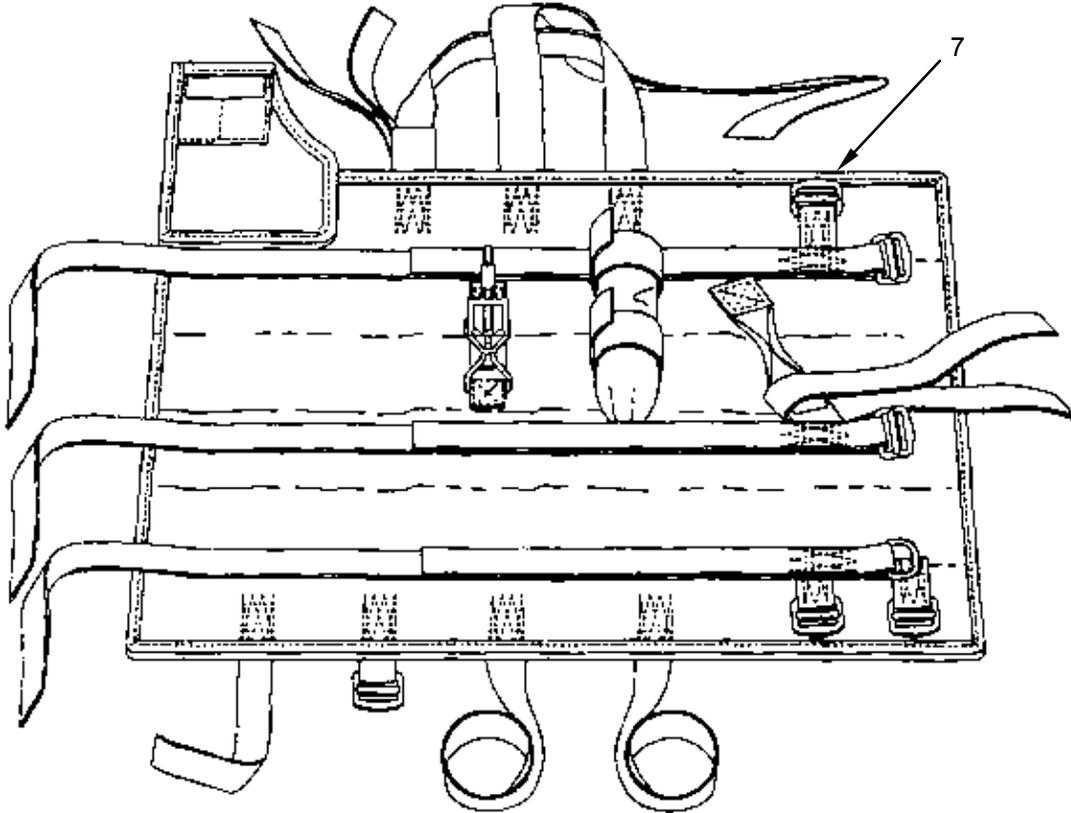

ACCESSORY SET, SCUBA

Line, Lowering 15-Foot (6). The lowering line (6) is constructed of nylon webbing with a snap hook at one end. An extension extractor fabricated of nylon duck material is located at the center. The adapter web has attaching hardware on one end.

LINE, LOWERING

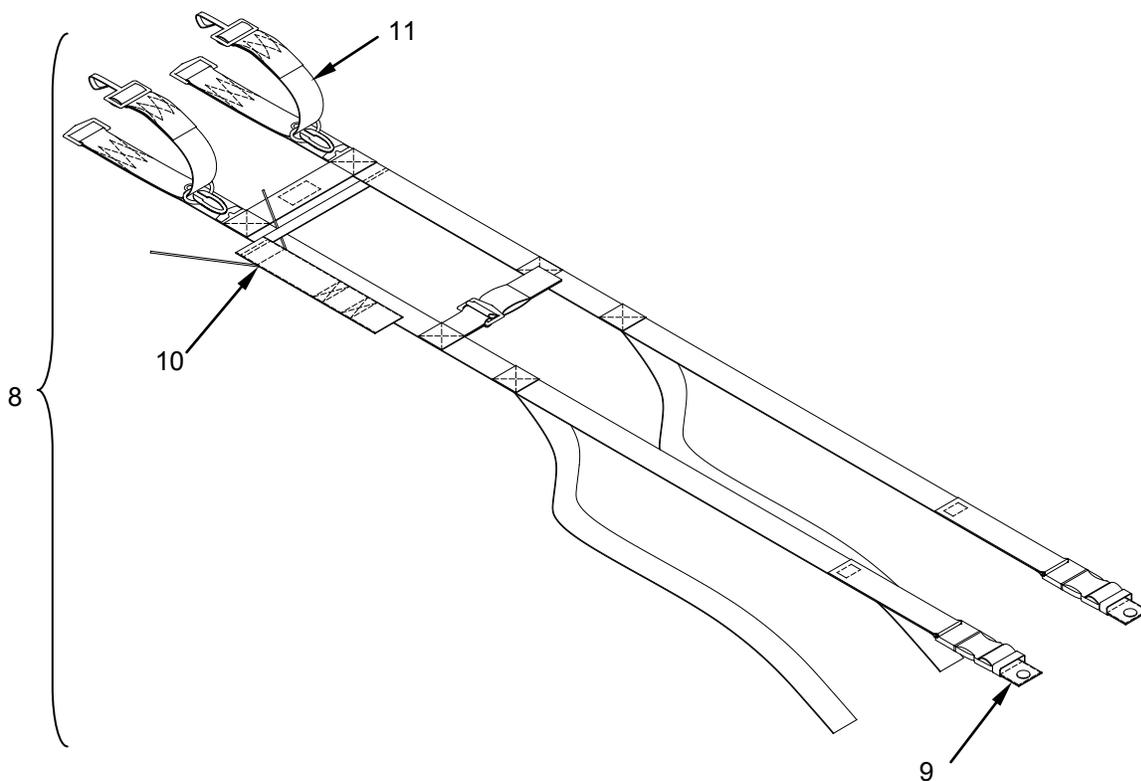

Jump Pack, Parachutist (7). The parachutist pack (7) is fabricated from nylon or cotton duck, webbing and various types of tapes. The pack incorporates adjustable straps with quick fit and release hardware listed in WP 0039 00. A 15-foot lowering line and stowage pocket is attached to the exterior of the pack.

JUMP PACK, PARACHUTIST

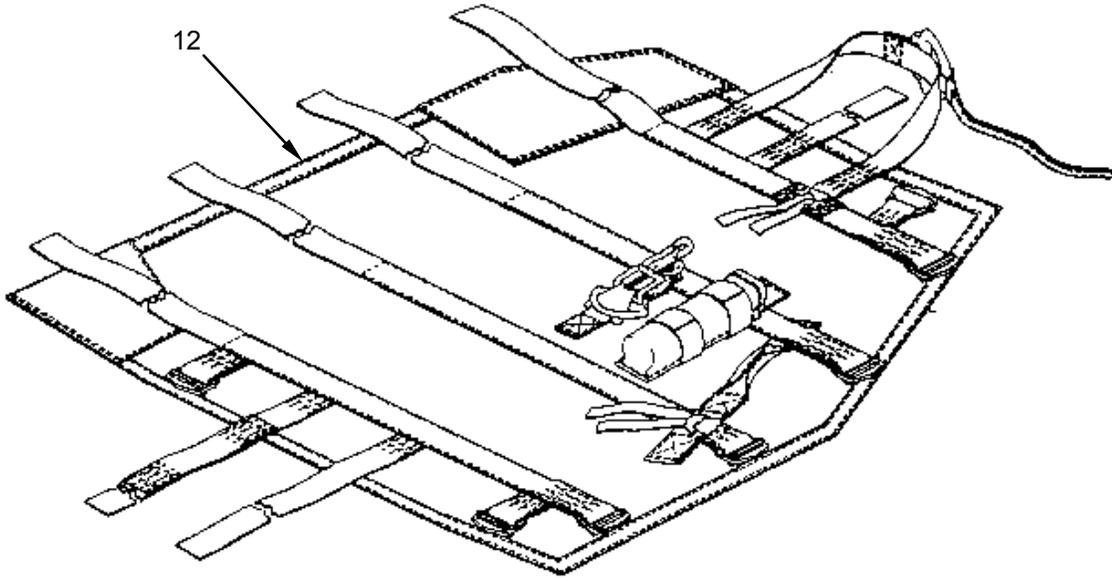

Harness, Single Point Release (8).

1. **Strap, Leg Release (9).** This strap is constructed of 1-inch wide nylon elastic webbing, approximately 4-inches long with a side release buckle (female) at one end and a Type III Spur Grommet on the other.
2. **Handle, Release (10).** The single point release handle assembly consists of a tubular webbing lanyard to which the angular wire release cable is attached.
3. **Strap, Harness, Attaching (11).** This strap is made of 1 ½ -inch Type III nylon webbing with a snap hook on one end, and a triangular link on the other.

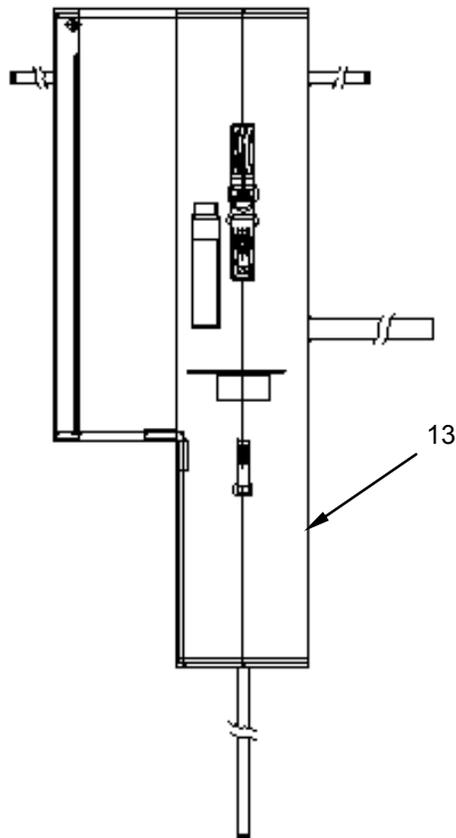

HARNESS, SINGLE POINT RELEASE

Pack, Assembly, AT4 (12). This jump pack is fabricated from nylon duck, nylon webbing, wool felt, and cotton tape. The pack incorporates adjustable straps and quick release/fit hardware listed in WP 0041 00. A 15-foot lowering line and stowage pocket is located on the exterior of the pack.

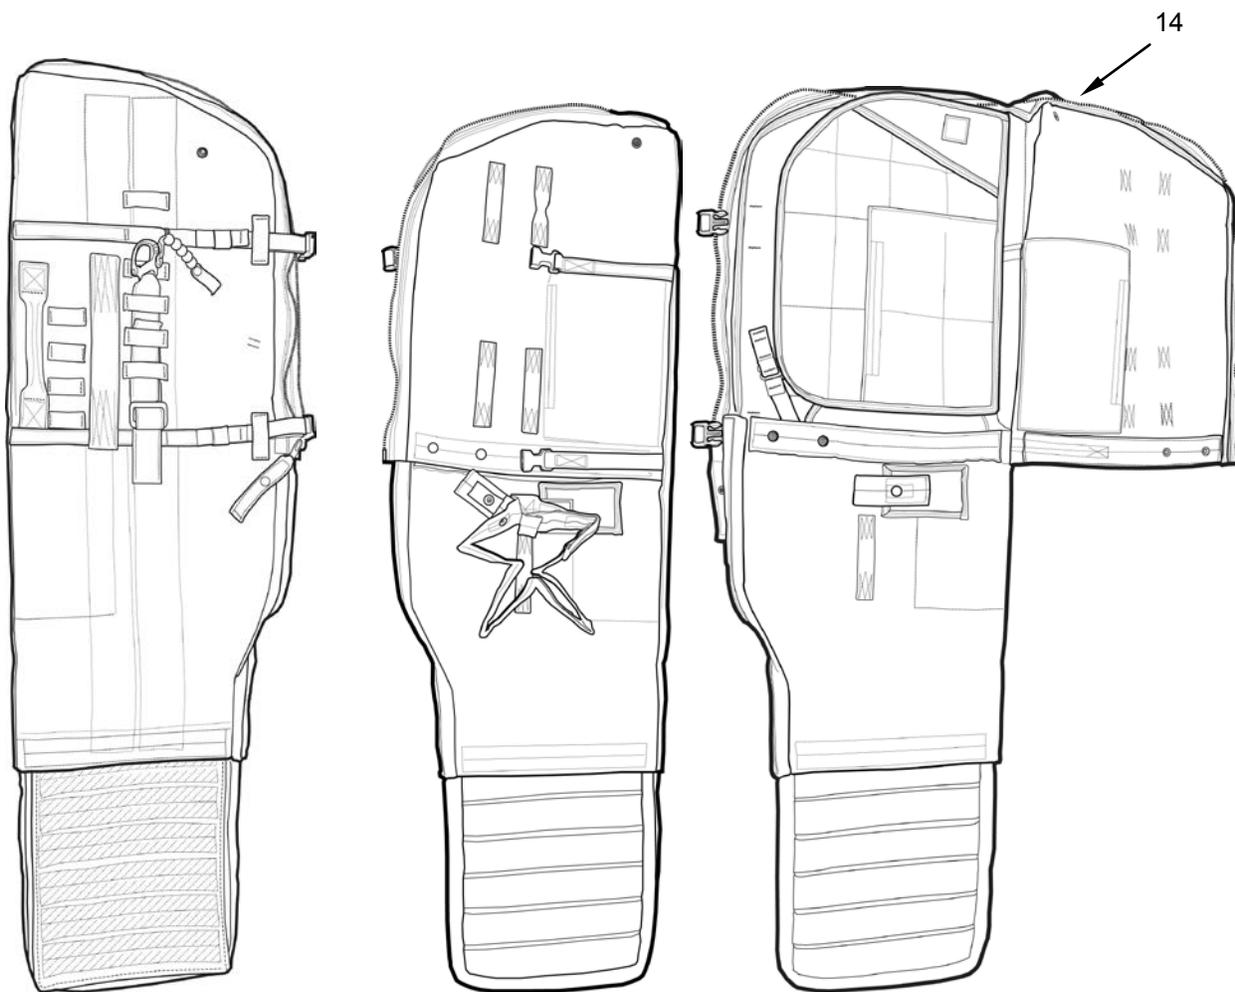

PACK, ASSEMBLY AT4

Case, Parachutist's Individual Weapon, M-1950 (Nylon) (13). The parachutist's individual weapons case is made of 12.5 oz nylon cloth, lined in ¼-inch thick felt. The bottom of the case is reinforced on the inside with leather or inner reinforcement webbing. The case is closed at the side by means of a slide fastener thong and a snap fastener. The weapons case is equipped with a quick-release snap link and several metal loops that are all attached to the case by webbing chapes. The snap link is provided for accommodation of the quick-release snap-hook that secures the weapons case to the parachutist's harness. The weapons case also has a webbing-adjusting strap; two tiedown tapes, each of which is attached to a webbing tie-down loop; a 15-foot lowering line; and a lowering line pocket. Hardware items are listed in WP 0043 00 for Case, Parachutist's Individual Weapon, M-1950 (Nylon).

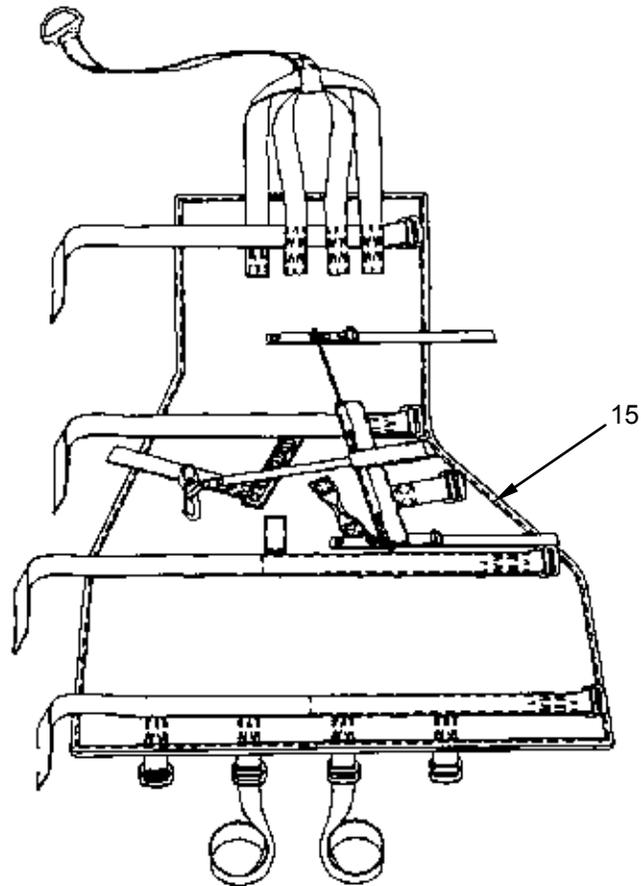

CASE, PARACHUTIST'S INDIVIDUAL WEAPON, M1950 (NYLON)

Case, Modular Airborne Weapons, (Large or Small) (14). The Modular Airborne Weapons Case is available in small and large sizes, made from Cordura 1000 with a dense foam inner lining and a foam padded internal divider to support two separate items. The improved modular design provides a Snap Shackle, a single affixed attachment point, vertically adjustable to the height of the jumper. The weapons case includes a nose cone that is vertically adjustable to accommodate various lengths of weapons and equipment. Compression straps allow the width of the weapons case to be increased or decreased. The case is closed at the side by means of a slide fastener and hook and pile material along the center. The weapons case also has multiple locations to accommodate tie-down tapes and incorporates a lower leg tie-down strap. Webbing attachment points located at varying points on the case are provided to accommodate a 15-foot lowering line. Repair items are listed in WP 0042 for Case, Modular Airborne Weapons (MAWC).

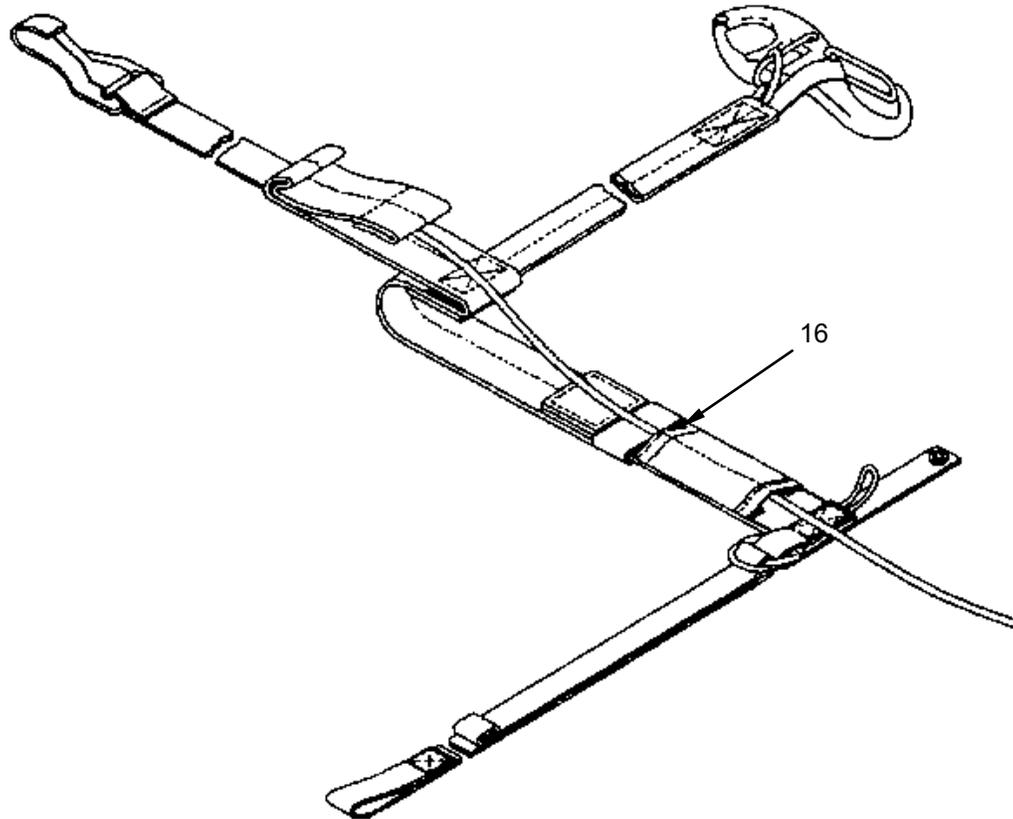

CASE, MODULAR AIRBORNE WEAPONS

Jump Pack, Stinger Missile (15). The stinger pack consists of a nylon shell and felt liner. The pack incorporates adjustable straps of Type II, VII, and X woven nylon webbing with quick fit and release hardware, a carrying handle, and a single-pull quick release subsystem. Hook and pile fasteners of varying dimensions are also used. The standard 15-foot lowering line is used with this pack. Hardware items are listed in WP 0045 00.

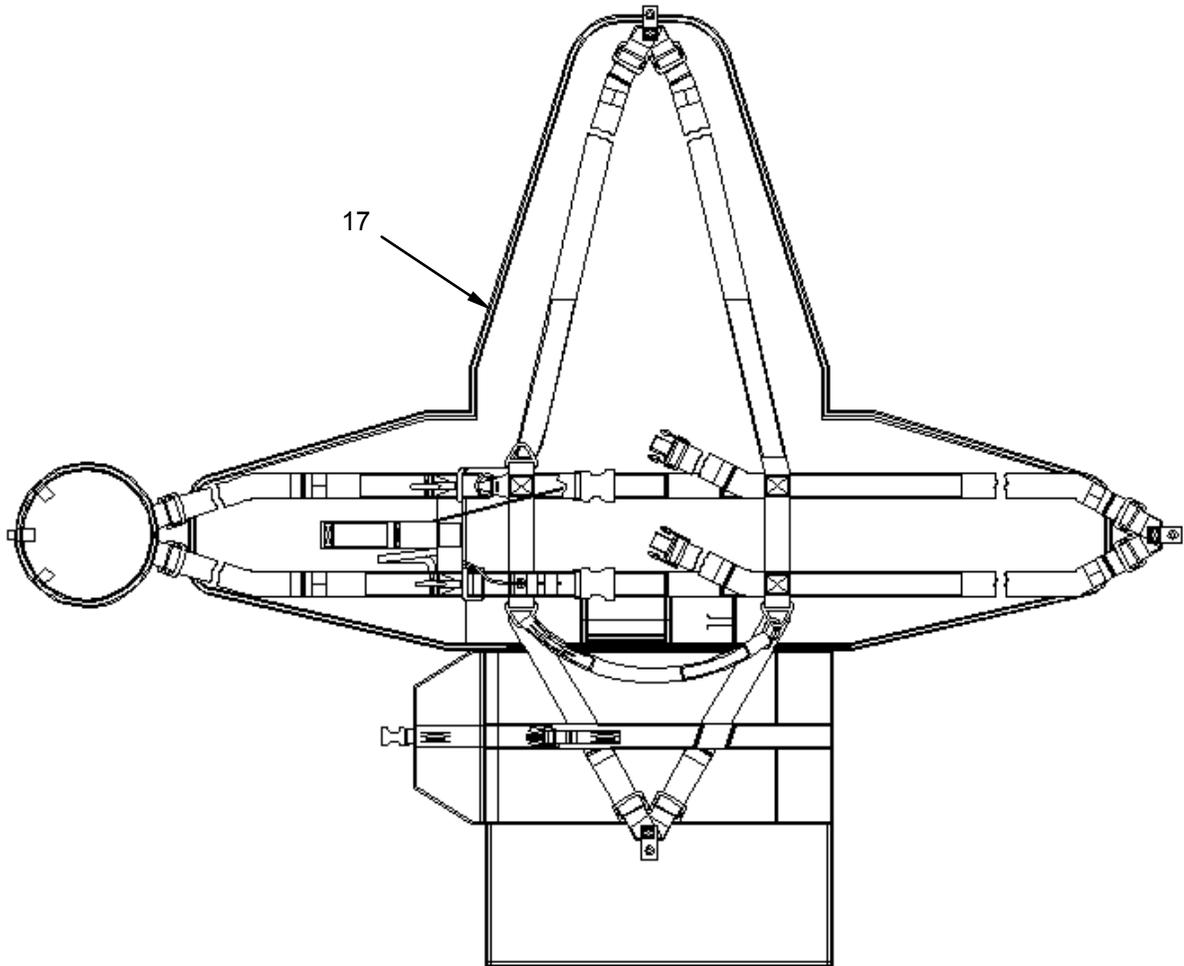

JUMP PACK, STINGER MISSILE

Parachutist's Individual Equipment Rapid Release PIER2 (16). The release assembly consists of a webbing and hardware release assembly that connects the side mount (weapons container) to the large D-ring on the harness and the front mount (rigged rucksack). Pulling the single point release handle on the front mount allows the containers to be released simultaneously as a system; the front mount separates from the jumper which activates the PIE/R2 and releases the side mount on the standard 15-foot lowering line.

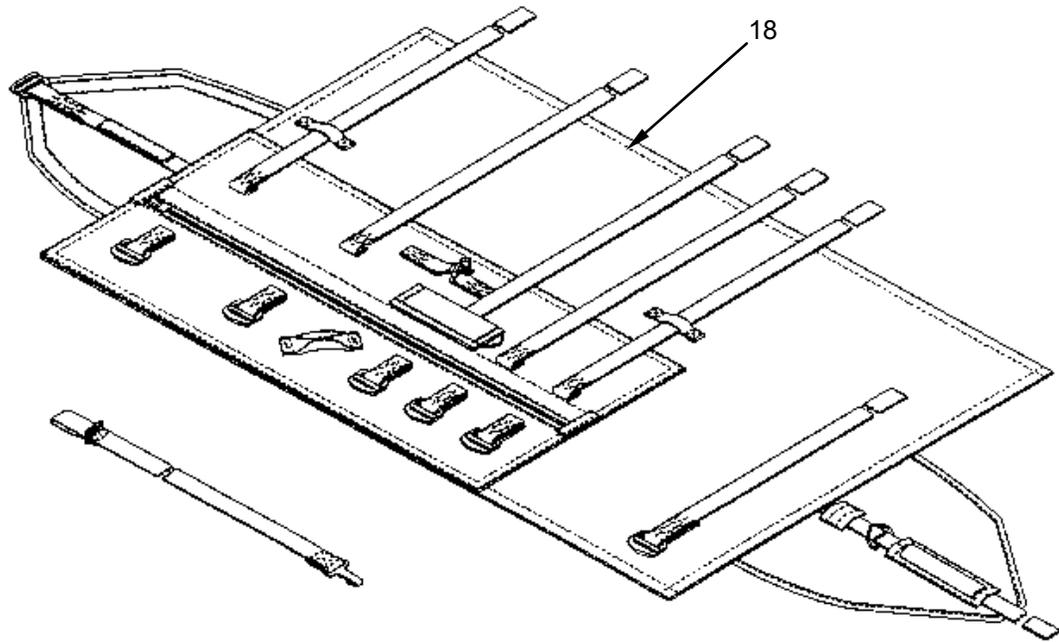

RAPID RELEASE ASSEMBLY

Container, Front Mount (AIRPAC) (17). The front mount container allows for a single point release and provides a bag for parachute recovery.

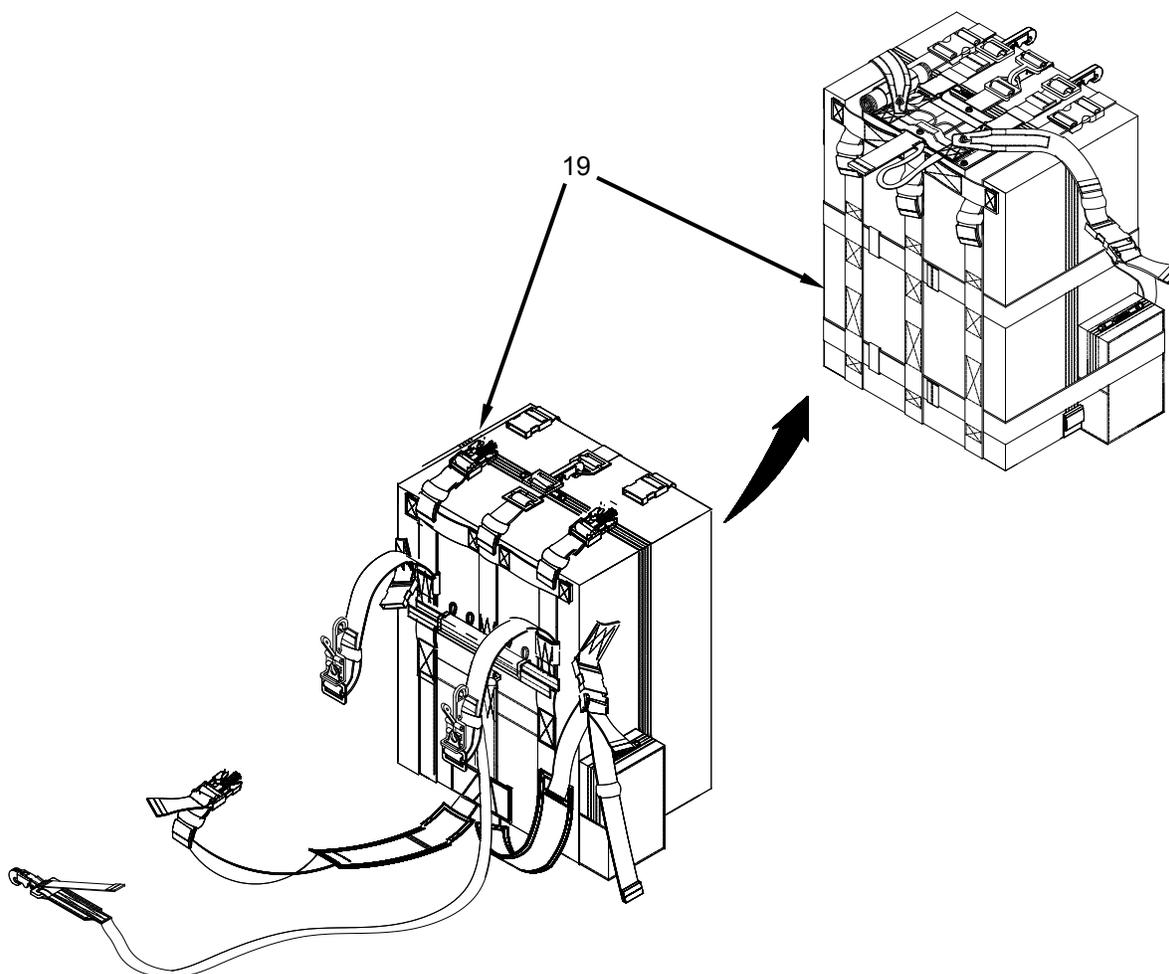

CONTAINER, FRONT MOUNT (AIRPAC)

Container, Side Mount (AIRPAC) (18). The side mount container is designed for large weapons and equipment such as the Dragon Missile, AT4 missile and snow/ice traversing equipment.

CONTAINER, SIDE MOUNT (AIRPAC)

Parachute Drop Bag (PDB) Description. (19) The Parachute Drop Bag is a fast, easy and secure way of carrying the jumper's rucksack and Load Bearing Equipment during Military Free Fall or Static Line deployment operations. The PDB is made from textured nylon, cloth duck material. The PDB has shoulder straps on both inside and outside the bag. It will be a Woodland or Desert camouflage on the outside with the inside being a darker gray color so it will have a lower profile when transporting through airports and high secure areas. An integrated lowering line (7-ft or 15-ft) is used for lowering of equipment during Military Free-Fall and Static Line operations. The PDB has dual mounting capabilities that will allow the jumper to attach the bag to the front for Static Line operations, and rear or front configurations for Military Free-Fall operations. Incorporated in the PDB is a single point release system, which will allow for the jumper to lower their equipment easily while descending to the drop zone. Parachute grade hardware is used on this system for safety and durability. The PDB comes in a regular size which will be incorporated into jump operations whether MFF or Static Line. The regular PDB weighs 7 lbs and has approx. 5520 cubic inches of storage space with a minimum 35 lbs and maximum 120 lbs rigged for jump operations.

DROP BAG, PARACHUTE (PDB)

EQUIPMENT DATA

The following technical and identification data pertains to ancillary equipment for Personnel Parachute Systems.

Equipment Specification Data**Table 1-1 Equipment Data**

Item	Material	Finished Dimension
Support Strap	Type III Nylon Webbing	66" L
Backstrap Harness	Type XIII Nylon Webbing	69" L
Strap Waist-Band Extension	Type VIII Nylon Webbing	24.5" L
Shield	Aluminum	
Line, Lowering	Nylon	15 Feet
Jump Pack, Parachutist	Cotton or Nylon Duck	39" L, 30"W
Harness Single Point Release	Type VIII Nylon Webbing	
Strap, Leg Release	Cotton Webbing	4" L
Handle, Release	Nylon Webbing	
Strap, Harness Attaching	Type III Nylon Webbing	
Pack, Assembly AT4	Nylon or Cotton Duck	40" L, 30" W
Case, Parachutist's Individual Weapon M-1950 (Nylon)	Nylon Duck	34" L to 51"L, 10 1/4" W
Jump Pack, Stinger Missile	Nylon Duck	67" L, 38" W
AIRPAC, Release, Front & Side Mount	N/A	N/A
Drop Bag, Parachute	Cloth, duck, textured nylon, Class III, CG483	30" H, 26" W, 18" D
Case, Modular Airborne Weapons (Large)	Cordura (1000 Denier)	52 1/2" L, 16" W Adjustable to 41" L, 11" W
Case, Modular Airborne Weapons (Small)	Cordura (1000 Denier)	43 1/2" L, 14" W Adjustable to 34 1/2" L, 8" W

Table 1-2 Equipment Data for Parachutist's Drop Bag (PDB)

Item	Material	Specification

Hook & Pile (Velcro)		MIL-F-21840

COMMON TOOLS AND EQUIPMENT

For authorized common tools and equipment, refer to the Modified Table of Organization and Equipment (MTOE), CTA 50-970, or CTA 8-100, Army Medical Department Expendable/Durable Items, as applicable to your unit.

Repair parts are listed and illustrated in the repair parts and special tools list located in work packages 0035 00 through 0049 00.

END OF WORK PACKAGE

**OPERATOR, UNIT, AND DIRECT SUPPORT MAINTENANCE
ANCILLARY EQUIPMENT FOR PERSONNEL PARACHUTE SYSTEMS
THEORY OF OPERATION**

THEORY OF OPERATION

Equipment Configuration. Ancillary Equipment for Personnel Parachute Systems are used with individual parachutes. This equipment is not provided or issued as a set; each component must be requisitioned separately. The equipment configuration is dictated by the mission.

Description. This paragraph will explain how the various components are used in conjunction with others to achieve the intended purpose. The interface and function of each component will be explained.

Accessory Set, SCUBA. This set includes a waistband extension, a backstrap harness, support straps, and a shield. The waistband extension is attached to the waistband adapter and allows for the extra bulk of the SCUBA gear. The longer (69-inch) backstrap harness replaces the standard 59-inch horizontal backstrap in this configuration. A support strap is attached to each of the canopy releases of the harness assembly. The shield is installed over the SCUBA tank to prevent the static line from becoming entangled in the regulator valves.

Lowering Line. The standard lowering line is used to lower a 15-foot long assembly with a quick ejector snap fastener for attachment to the parachute harness. The line can be used with any of the packs described in this manual.

Jump Pack, Parachutist. The Parachutist Pack is designed to form a padded, wrap-around type packing around the skidco for attachment to the parachutist's harness. It also protects the Parachutist's M-4 rifle. The pack is attached to the left reserve parachute "D" Ring of the T-10 harness, or the Equipment Ring of the T-11 harness, with a quick release type snap. A leg tiedown strap assists in retaining the pack to the parachutist during exit and main parachute deployment. The lowering line permits lowering the pack below the parachutist prior to landing to mitigate potential damage to personnel and weapons.

Harness, Single Point Release. This harness is a general-purpose item used by the individual parachutist to jump the ALICE medium or large combat pack with or without frame. It is of an "H" type design with a network of equipment retainer straps, cross straps, leg straps, leg strap release assembly, attaching harness strap, and single point release handle.

Pack Assembly, AT4. The AT4 pack is designed to form a padded, wrap-around type packing around the AT4 missile for attachment to the parachutist's harness. It also protects the parachutist's M-16 rifle. The pack is attached to the left reserve parachute "D" Ring of the T-10 harness, or the Equipment Ring of the T-11 harness, with a quick release type snap. Tiedown straps are provided for attachment to the harness main lift web and left leg for retaining the pack to the parachutist during exit and main parachute deployment. The lowering line permits lowering the pack below the parachutist prior to landing to mitigate potential damage to personnel and weapons.

Case, Parachutist's, Individual Weapons, M-1950. The parachutist's individual weapons case is used by the parachutist to carry individual and crew served weapons. A quick release snap fastener secures the case to the parachutist's harness and two tapes, which are tied to the case and to the parachutist, keep the case from swaying when the parachute deploys.

Case, Modular Airborne Weapons, (Large and Small). The modular airborne weapons case is used by the parachutist to carry individual and crew served weapons and associated equipment. A Snap Shackle secures the case to the parachutist's harness and two tapes, which are tied to the case and to the parachutist, keep the case from swaying when the parachute deploys.

Jump Pack, Stinger Missile. The pack is designed to carry one Stinger Missile round and is attached to the left side of the parachutist's harness. Prior to landing the pack is vertically suspended beneath the parachutist with a standard lowering line. A foam cap protects the weapon during impact.

Parachutist's Individual Equipment Rapid Release. This release assembly is primarily intended for use with the AIRPAC containers described below, but is also compatible with all existing containers. It provides a universal release of equipment containers carried by the parachutist.

Container, Aerial Delivery, General Purpose, Individual Equipment. Together with the container described below, this item is part of a system designed to carry a variety of the soldier's weapons and equipment. This container is front mounted, and will accommodate a rucksack, ammunition, and other, smaller items. It is adjustable to conform to the items carried.

Container, Aerial Delivery, Weapons and Equipment, Adjustable. This side mounted general-purpose container is designed to accommodate larger and longer equipment items carried by the parachutist, such as individual weapons, anti-tank weapons, antennas, skies or other bulky items. Up to 40 lbs may be carried in this container.

Parachute Drop Bag (PDB). The PDB is a lightweight nylon bag used to carry mission essential equipment to include current field packs (Alice Pack, Mollie Pack, Spear Pack, and Field Pack w/internal Frame) during Static Line and Military Free-Fall (MFF) jumps. The PDB is mounted to the d-rings on the main harness assembly of the MC-4 parachute system. When the jumper wears the PDB in the front mounting configuration the incorporated single point release will only be used. Mounting the PDB in the rear-mounting configuration the 2-point quick releases will only be used. Leg Straps assist in retaining the PDB bag to the parachutist during exit and main parachute deployment. Lowering line permits lowering the pack below the parachutist prior to landing to mitigate potential damage to personnel and equipment.

Lowering Line. The 7-foot or 15-foot lowering line is used to lower the PDB with a quick ejector snap fastener for attachment to the parachute harness. The 7-ft line is used for MFF and the 15-ft line is used for static line jumps.

**CHAPTER 2
UNIT MAINTENANCE
ANCILLARY EQUIPMENT FOR:
PERSONNEL TROOP PARACHUTE SYSTEM**

**UNIT MAINTENANCE
ANCILLARY EQUIPMENT FOR PERSONNEL PARACHUTE SYSTEM
SERVICE UPON RECEIPT**

INITIAL SETUP:**Tools**

Needle, Tacking (WP 0034 00, Table 2, Item 9)

Personnel Required

92R (10) Parachute Rigger

Materials/Parts

Tape, Lacing and Tying (WP 0052 00, Table 1, Item 38)

Equipment Condition

All equipment shall be serviceable and ready for use.

OVERVIEW

This chapter contains information necessary to maintain Ancillary Equipment for Personnel Parachute Systems, on the unit maintenance level, in accordance with the Maintenance Allocation Chart (MAC) for the equipment. It includes the following:

1. Procedures for processing new or used equipment upon receipt.
2. Assembly of components prior to use.
3. Preventive maintenance procedures to ensure continued serviceability of all components.
4. As required inspections and maintenance procedures performed prior to airing, cleaning and drying, and salt-water contamination tests.
5. Repair methods and repair, or replacement, procedures for all components of the assembly.

INITIAL RECEIPT

The following describes the procedures for processing parachutes upon initial receipt.

General Procedures for Ancillary Equipment For Personnel Parachute Systems. When air delivery equipment is initially procured from a supply source and issued to a using unit, the item(s) will be unpacked from the shipping container(s) and inspected by a qualified parachute rigger (MOS 92R). The inspection performed will be a technical/ rigger-type inspection and will be conducted as outlined in the Preventive Maintenance Checks and Services (PMCS) procedures. Upon completion of the inspection, the item(s) will be tagged as prescribed in DA PAM 738-751. Serviceable equipment may then be entered either into storage or into use in airdrop operations, as applicable. An unserviceable item will be held and reported, in accordance with DA PAM 738-750/ MCO 4855.10B.

Shipping Materials. Save the shipping cartons and crates for reuse when possible.

Inspection Personnel. Personnel other than parachute rigger personnel may assist in the unpacking process of initially received equipment, as directed by the local air delivery equipment maintenance officer. However, the maintenance officer will ensure the entire unpacking effort is conducted under the direct supervision of a qualified rigger (MOS 92R).

Configuration Condition. Acceptance of new equipment from the manufacturer is based upon inspections made of sample lots that have been randomly selected in accordance with military standards. It is incumbent upon the using activity personnel to bear this in mind whenever equipment is first placed in service. Changes will sometimes evolve from the original equipment design and sometimes contractors are authorized deviations in material and construction techniques. Air delivery equipment that has been in the field cannot be expected to meet exacting manufacturing specifications; however, the equipment should closely reflect desired design characteristics. Since repairs, modifications, and/or changes can alter or detract from the configuration originally desired, such equipment shall be airworthy, safe, of the desired configuration, and adequate for intended use.

Parachute Log Record. The Army Parachute Log Record, DA Form 3912, AFTO 391, and NAVWPNCEN or NAWCWPNS CL 13512/11 (Premeditated Parachute Record) are history-type maintenance documents that accompany some of the Ancillary Equipment through the period of service of the individual assembly. The log record provides a means of recording maintenance actions performed on equipment. Normally, a log record is initiated and attached to the item by a using unit. However, if the item is subjected to alteration or modification by a maintenance activity during the interim period from date of manufacture to receipt by a using unit, the log record will be prepared by the activity performing the maintenance function. Once initiated, a log record will be attached to, and contained in, an affixed parachute log/record/inspection data pocket (if applicable), until such time as the item is destroyed or rendered unfit for further use or repair.

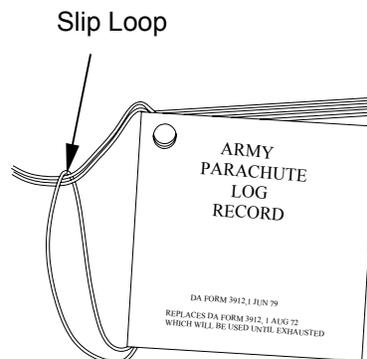

Additionally, should an item that requires a log record, be transferred from one unit to another, the log record for the item will accompany the item in the transfer action. A prepared log record will not be removed or separated from an item except as directed by the local air delivery equipment maintenance activity officer.

A log record that is illegible, lost, damaged, soiled, or precludes further entries due to lack of space, will be replaced, as applicable, with a serviceable item from stock.

Installing Attaching Tie.

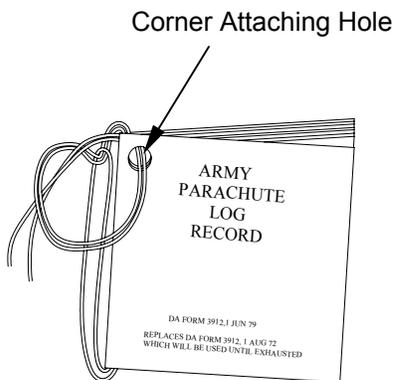

Install attaching tie as follows:

1. Cut a 30-inch length of tape, lacing and tying (super tack), and double the lacing length.
2. Pass the looped end, of the double laced length, around the centerfold of the log and form a slip loop on the outside, at the log record top.

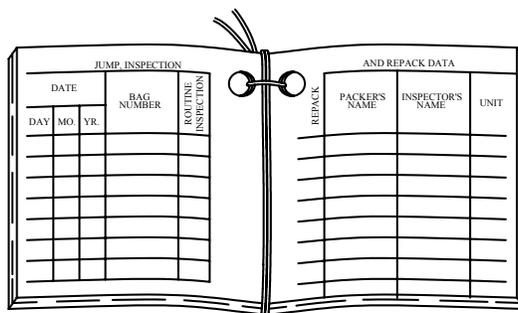

Forming Slip Loop on Log Record Outside

3. Pass the lacing length running ends through the corner attaching hole, from the front cover of the log record.

Passing Lacing Loose Ends Through Corner Attaching Hole

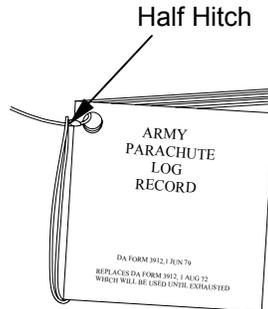

4. Ensure the running ends are routed over that part of the lacing length located along the log record centerfold.

Routing Lacing Loose End Through Log Record Centerfold

5. Complete the attachment tie by making a half hitch on top of the slip loop made in 2., above.
6. Thread one running end of the log record attachment tie in a tacking needle and pass the tacking needle, with attached end, through the edge binding of the applicable parachute log record/ inspection data pocket.

- Remove the lacing end from the tacking needle; make a finished 10-inch-long log record attaching loop by securing the two lacing ends together with an overhand knot.

Log Record Attachment Tie Completed

- Insert the log record into the pocket (if applicable) and secure the record within the pocket using the pocket flap and applicable type flap fastener.

Accomplishing a Log Record. Upon completion of the first technical/ rigger-type inspection, the individual performing the inspection will initially prepare a log record for an item and accomplish subsequent record entries using the following procedures:

NOTE

Log record book entries will be made with a suitable type blue or black marking device that cannot be erased (no felt tip markers).

- Inside front cover.** Using the information provided on the item, make the following entries on the inside front cover of the log record. Entries may be contained on the inside of the back cover, if necessary.

SERIAL NO.	○
TYPE	
PART NO.	
DATE OF MFG. (Month & Year)	
MANUFACTURER	
CANOPY CONTRACT NO.	
MO/YR CANOPY PLACED IN SERVICE	
STATION & UNIT	
(Continued on inside back cover)	

NOTE

A serial number is recorded in a log record as a method of establishing control for maintenance, Equipment Improvement Report (EIR) and Product Quality Deficiency Report (PDQR) documentation, and to ensure the correct original record is reattached should the record become detached. A serial number will not be used for property accountability, except in test projects or other special instances.

- a. Serial Number. Enter the item serial number.
- b. Type. Enter the item type.
- c. Part number. Enter the item part number (if applicable).
- d. Date of Manufacture. Enter the month and year the item was manufactured.
- e. Manufacturer. Enter the name of the item manufacturer.
- f. Contract Number. Enter the entire contract number specified for the item.
- g. Station and Unit. Enter the name of the station and unit to which the item is currently assigned. When an item is transferred permanently to another station, and/or unit, the original entry will be lined out and the name of the receiving station, and/or unit, will be entered.

2. **Inside Back Cover.** Entries may be continued on the inside back cover, if necessary.

STATION & UNIT (Continued)

3. **Modification Work Order (MWO) Compliance Record Page.** When a modification is performed on an item, the following entries will be made on the Modification Work Order Compliance Record pages of the log record, as follows:

- a. MWO Number. Enter the publication number and date of the MWO that describes the MWO (1, illustration below).

MODIFICATION WORK ORDER		COMPLIANCE RECORD					
MWO NUMBER	MWO TITLE	MODIFIED BY (NAME)	INSP. BY	UNIT	DATE		
					DAY	MONTH	YEAR
10-1670-243-23-P 15 JULY 01	STATIC LINE STOW MODIFICATION	Venckew	TJR	SBCCOM	24	3	00
10-1670-243-23-P 15 JULY 01	STATIC LINE STOW MODIFICATION	C/W	TJR	SBCCOM	24	6	01

1. **Modification Work Order Compliance Completed.**
2. **Modification Completed By Unknown Due To Lost Original Log Record.**

- b. **MWO Title.** Enter a short, abbreviated title extracted from the MWO prescribing the work.
 - c. **Modified by.** Enter the last name of the individual who has performed the modification. If the original log record for the item has been lost, and it has been ascertained through inspection that a particular modification has been accomplished, the entry for this column will be CIW, complied with, which signifies the applicable MWO has been complied with.
 - d. **Inspected by.** The individual who accomplished the inspection, required after modification, will sign this entry with last name only.
 - e. **Unit.** Enter the unit designation responsible for performing the MWO or, in the event of a lost log record, the unit to which the inspector is assigned.
 - f. **Date.** Enter the day, month, and year the modification work was completed.
4. **Unit and Direct Support Repair and Inspection Data.** When an item is initially received from a supply source, and a technical/rigger-type inspection is performed, the inspection accomplishment will be documented on the Unit and Intermediate Repair and Inspection Data page of the item log record. Additional entries will also be made on this page each time the item is repaired, or is administered an inspection, in compliance with a one-time inspection dictated by a Maintenance Advisory Message (MAM) or Ground Precautionary Message (GPM). The page completion criteria are as follows:
- a. **Type of repair.** Enter the type of repair, completion of initial inspection, repair accomplishment, and GPM/MAM inspection compliance.
 - b. **Inspection by.** The individual, who accomplished the inspection required, will sign this entry with last name.
 - c. **Unit.** Enter the unit designation responsible for performing the type of repair.
 - d. **Date.** Enter the day, month, and year the repair was performed.

1. Completion Of Initial Inspection
2. Repair Accomplishment
3. GPM/MAM Inspection Compliance

5. **Note page.** A page is provided at the back of a parachute log record to accommodate recording additional data pertinent to the serviceability of an item. This shall also include the month and year the item was placed in service.

NOTE

A parachute log record that is completely filled out, lost, illegible, or in an otherwise unserviceable condition, will be replaced with a serviceable log record.

6. **Replacing a filled out or unserviceable log record.**

- a. Using a suitable blue or black marking device, enter NEW BOOK on the outside front cover of the replacement log record.
- b. Transcribe the information from the inside front cover of the original log record to the inside front cover of the replacement log record. If the original data is illegible or missing, use the item information data block to collect the required data.
- c. In the replacement log record; transcribe the initial and last entry made on the Jump, Inspection, and Repack Data page of the original log record.
- d. Transcribe all data from the remaining pages of the original log record; to the appropriate pages of the replacement log record.
- e. After all original data has been transcribed destroy the original log record.

7. **Replacing a lost log record.**

NOTE

Any time a log record is discovered missing from an item, a replacement log record will be initiated during inspection, as applicable.

- a. Using a suitable blue or black marking device, enter NEW BOOK at the top of the inside front cover of the replacement log record.
- b. Accomplish the log record inside front cover as prescribed above.

- c. The age life of the item (if applicable) will be obtained from the date placed in service (initial) and other applicable data on the jump, inspection, and Repack Data page of the log record, as detailed above. Enter IN, if the date placed in service is known. If not known, enter UNK.
- d. If it can be ascertained by inspection that a previous MWO or GPM/MAM has been complied with, applicable entries will be made on the appropriate page of the replacement log record.
- e. Attach the replacement log record to the log record/inspection data pocket using the procedures above.

RECEIPT OF USED ANCILLARY EQUIPMENT FOR PERSONNEL PARACHUTE SYSTEMS

Upon initial receipt of used equipment, proceed as follows:

1. Follow procedures given in the General Procedures for Ancillary Equipment For Personnel Parachute Systems paragraph, above, and check each component for excessive wear and tear.
2. If defects or damages are discovered, process the parachute for maintenance at the maintenance level assigned by the Maintenance Allocation Chart (MAC), WP 0034 00.

AFTER USE RECEIPT

When an item is received at the maintenance activity, following its use by the parachutist during air delivery, it must be cleaned (WP 0009 00) before it can be returned to service. If an item is issued but is not used, it does not need to be cleaned however, it must be given a routine inspection by a qualified parachute rigger (MOS 92R).

END OF WORK PACKAGE

UNIT MAINTENANCE
ANCILLARY EQUIPMENT FOR PERSONNEL PARACHUTE SYSTEM
PREVENTIVE MAINTENANCE CHECKS AND SERVICES (PMCS), INTRODUCTION

GENERAL

The following describe PMCS procedures on the unit and direct support levels. The PMCS table has been provided to ensure the Ancillary Equipment for Personnel Parachute Systems are in proper operating condition, and ready for its primary mission.

SCOPE

The following work packages (WP 0005 00 through WP 0029 00) contain maintenance procedures that are the responsibility of the specified technician, as authorized by the Maintenance Allocation Chart (MAC), and the Source, Maintenance, and Recoverability (SMR) coded items that are identified in the Repair Parts and Special Tools List (RPSTL).

MAINTENANCE FUNCTIONS/PROCEDURES

Each of the mentioned work packages above identifies a maintenance function specified in the MAC. All maintenance procedures required to complete a maintenance function are identified under THIS TASK COVERS: in the order in which the work is most logically accomplished.

DROP TESTING CRITERIA

Drop-testing of aerial delivery equipment consist of physically airdropping an item from an aircraft in flight. The drop-test is used as a means of proving the serviceability of an item or checking parachute rigger proficiency, and will only be performed under the supervision of qualified parachute rigger personnel who satisfy the supervisory requirements outlined in AR 750-32. Drop-testing will usually be conducted by an activity responsible for the inspection and maintenance of airdrop equipment, which includes either parachute packing or airdrop load rigging. The criteria required to accomplish a drop test is as follows:

1. To drop-test a troop-type personnel parachute, a qualified parachute rigger will jump the parachute and the applicable type parachute will be released under conditions that are consistent with the requirements for a personnel jump or equipment drop.
2. During the drop-test of any type parachute, the deployment of the parachute will be thoroughly monitored and observed to detect any indication of malfunction or defect. A subsequent record of the applicable parachute log record will be entered into the applicable log record using procedures outline in WP 0004 00.
3. Any type of airdrop equipment that indicates evidence of malfunction/defect during, or after, a drop-test will be disposed of as prescribed in WP 0008 00.
4. A personnel parachute that is considered to have contributed to the injury of an individual parachutist (critical or fatal) will be disposed of as prescribed in WP 0008 00, Equipment Disposition.
5. Airdrop equipment that does not reflect evidence of malfunction or defect upon completion of a drop-test will be administered a technical/rigger-type inspection as outlined in WP 0008 00. If serviceable, the item(s) may then remain in use.

END OF WORK PACKAGE

UNIT MAINTENANCE
ANCILLARY EQUIPMENT FOR PERSONNEL PARACHUTE SYSTEMS
PREVENTIVE MAINTENANCE CHECKS AND SERVICES

GENERAL

The following describe PMCS procedures at the unit level. The PMCS table has been provided to ensure the Ancillary Equipment for Personnel Parachute Systems are in proper operating condition, and ready for its primary mission.

Frequency of Performing PMCS. PMCS will be performed before equipment is rigged for use, during modification and repair after use, or at any time deemed necessary by the Airdrop Systems Technician.

PMCS Columnar Entries Table 1.

Item Number. The item number column shall be used as a source of the item number required for the TM Number column on DA Form 2404 (Equipment Inspection and Maintenance Worksheet), when recording the results of the PMCS.

Interval. This column identifies the required PMCS interval.

Item to be Inspected. Contains the common name of the item to be inspected.

Procedures. Provides a brief description of the procedures by which the checks are to be performed.

Not Fully Mission Capable If: Column. Information in this column tells you what faults will keep your equipment from being capable of performing its primary mission. If you perform check and service procedures that show faults listed in this column, do not operate the equipment. Follow standing operating procedures for maintaining the equipment or reporting equipment failure.

Recording Defects. All defects discovered during the inspection will be recorded using the applicable specifics in DA Pamphlet 738-750, DA Pamphlet 738-751 and TB 43-0002-43.

Over Age Items. During any inspection, or at any time that an item is found to be over age (i.e., shelf/service-life has expired as specified in TB 43-0002-43), the item will be removed from service, condemned, and tagged, in accordance with DA PAM 738-751.

Conservation of Resources. To conserve time and labor, and to avoid evacuation to a direct support maintenance activity, unit/detachment commanders may designate, in writing, rigger personnel to accomplish classification inspection of over age air delivery equipment and the classification of Beyond Economical Repair (BER).

Inspection Function Requirement. Normally, air delivery equipment maintenance personnel at a packing, rigging, or repair activity will perform a technical/rigger-type inspection. The inspection of initial receipt items will be performed as a separate function from packing or rigging activity; the item to be inspected will be placed in proper layout on a packing table or suitable sized floor area.

Should defect or damage be discovered at any point during the inspection, the inspection will be terminated and the applicable item will be processed and forwarded to repair activity. The repair activity, in turn, will conduct a technical/rigger-type inspection that will be performed by only those parachute rigger personnel cited in AR 750-32.

Any defect discovered during a unit level repair activity inspection, that exceeds the capability of that activity, will require the affected item to be evacuated to a direct support maintenance function.

Lubrication Instructions. Apply a limited amount of “zipper ease” lubricant to the slide fastener on any ancillary equipment component when it becomes difficult to operate.

Table 1. Unit Preventive Maintenance Checks and Services

Item No.	Interval	Location Item to Check/ Service	Procedure	Not Fully Mission Capable If:
01	Before / After	Accessory Set, SCUBA	Check waistband (1), support (2) and harness backstraps (3) for frays, cuts or tears and missing hardware. Check for open or loose stitches. Check shield (4) for deformation, burrs or sharp edges.	Cuts, frays or tears in any strap. Missing hardware on straps. Shield damaged.

END OF WORK PACKAGE

UNIT MAINTENANCE
ANCILLARY EQUIPMENT FOR PERSONNEL PARACHUTE SYSTEM
INTRODUCTION

INTRODUCTION TO UNIT MAINTENANCE

This section contains Unit Maintenance applicable to the Ancillary Equipment For Personnel Parachute Systems as authorized by the Maintenance Allocation Chart (MAC), Work Package 0034 00, of this manual.

All maintenance procedures in this section can be performed by one person unless otherwise indicated. Read all **WARNINGS**, **CAUTIONS**, **NOTES**, and instructions carefully before attempting any procedures. Read and understand all warnings at the front of this manual.

All Unit Maintenance instructions covered in this section are unique to Ancillary Equipment For Personnel Parachute Systems.

REPAIR PARTS; TOOLS; SPECIAL TOOLS; TEST MEASUREMENT AND DIAGNOSTIC EQUIPMENT (TMDE); AND SUPPORT EQUIPMENT

COMMON TOOLS AND EQUIPMENT. For authorized common tools and equipment, refer to the Modified Table of Organization and Equipment (MTOE), CTA 50-970, or CTA 8-100, as applicable to your unit.

SPECIAL TOOL, TMDE, AND SUPPORT EQUIPMENT. The tool and test equipment requirements required for the maintenance of the Ancillary Equipment For Personnel Parachute Systems are listed in WP 0034 00, Tool and Test Equipment List.

REPAIR PARTS. Repair parts for the Ancillary Equipment For Personnel Parachute Systems are listed and illustrated in WP 0035 00, Repair Parts and Special Tools List.

SERVICE UPON RECEIPT OF MATERIEL.

Shipping Materials. Save the shipping cartons and crates for reuse when possible.

Checking Unpacked Equipment. Inspect each unpacked component for damage and completeness, and application of all pertinent Modification Work Orders (MWOs) as follows:

Damage: Check the equipment for damage incurred during shipment. Report any damage on DA Form 2404, Equipment Inspection and Maintenance Worksheet and initiate corrective maintenance procedures in accordance with WP 0008 00 of this manual.

Completeness: Inspect the contents of shipment against the packing slip to see if any items are missing. Report any discrepancies in accordance with DA Pam 738-750. The equipment may be placed in service provided missing items do not affect function or safety of the equipment.

Modifications: Check DA Pam 25-30 to see if there are any MWOs applicable to the equipment you are unpacking. If any MWOs are listed, check DA Form 2408-5, Equipment Modification Record to see if MWOs have been applied to the equipment. The MWO number will be shown near the equipment nomenclature label. If a current MWO is listed in DA Pam 25-30, but there is no evidence that it has been applied to the equipment you are unpacking, note discrepancy on DA Form 2404, Equipment Inspection and Maintenance Worksheet.

Personnel Required
92R(10) Parachute Rigger

GENERAL

This section contains Unit Maintenance procedures for the Ancillary Equipment for Personnel Parachute System as authorized by the Maintenance Allocation Chart (MAC), WP 0034 00 of this manual. Procedures include instructions for inspecting, servicing, repairing and replacing assemblies and subassemblies. All maintenance procedures in this section can be performed by one person unless otherwise stated in the initial setup. Read all **WARNINGS**, **CAUTIONS**, **NOTES** and instructions carefully before attempting a procedure. Read and observe the **WARNINGS** at the front of this manual.

ROUTINE INSPECTION

A routine inspection is a visual check performed to ascertain the serviceability of all visible components of an item that is packed or rigged for use. The inspection will be made on all components that can be inspected without opening the container. Prior to issue, a parachute rigger will administer this inspection. Aerial delivery equipment issued for an air delivery operation and used will receive a routine inspection prior to being placed into ready-for-issue storage.

TECHNICAL/RIGGER-TYPE INSPECTION

A technical/rigger-type inspection is a complete and thorough inspection of an individual airdrop item, including associated parts and components. The following paragraphs outline criteria applicable to accomplishing a technical/rigger-type inspection. It will be performed by a qualified parachute rigger in accordance with AR 750-32.

1. Inspection Intervals.

- a. Upon initial receipt of procured equipment issued to a using unit by a supply source.
- b. Immediately before equipment is packed or rigged for use in airdrop operations.
- c. Before and after repairs or modifications are made.
- d. At any other time as deemed necessary by the airdrop equipment maintenance officer.

2. **Inspection Function Requirement.** Normally, a technical/rigger-type inspection will be performed at a packing, rigging or repair activity. The inspection of initial receipt items will be performed as a separate function from packing or rigging operations. When the inspection is conducted at a packing or rigging activity, the item to be inspected will be placed in proper layout on a packing table or suitable sized floor area. Should a defect or damage be discovered at any point during the inspection, the inspection will be terminated and the applicable item will be processed and forwarded to a repair activity. The repair activity in turn, will conduct a technical/rigger type inspection that will be performed by only those parachute rigger personnel cited in AR 750-32. The repair activity inspection of personnel parachutes will be made on a shadow table. Any defect discovered during a unit level repair activity inspection which exceeds the capability of that activity will require the affected item to be evacuated to a direct support maintenance facility for determination of economic repair and its application, if applicable.

Perform Inspection as follows:

1. **Overall Inspection.** An overall inspection will be made on the Ancillary Equipment for Personnel Parachute Systems to ascertain the following.
 - a. **Log Record/parachute Inspection Data Pocket and Form.** As applicable inspect the assembly log record/ parachute inspection data pocket (as applicable) to insure the Army Parachute Log Record (DA form 3912) or NAVWPNCEN or NAVWPNS CL 13512/11 (Parachute History Record) is enclosed and properly attached. Further, remove the log record from the pocket and evaluate the recorded entries. Inspect and evaluate as follows:

The Army Parachute Log Record, DA Form 3912, and AFTO 391 are history-type maintenance documents that accompany the items through the period of service of the individual assembly. The log record provides a means of recording maintenance actions performed on the items. Normally, a log record is initiated and attached to a convenient point on the item by a using unit. However, if the item is subjected to alteration or modification by a maintenance activity during the interim period from date of manufacture to receipt by a using unit, the log record will be prepared by the activity performing the maintenance function. Once initiated, a log record will be attached to, or contained in a suitable area, until such time as the item is destroyed or rendered unfit for further use or repair. Additionally, should an item that requires a log record, be transferred from one unit to another, the log record for that item will accompany the item in the transfer action. A prepared log record will not be removed or separated from the item except as directed by the local air delivery equipment maintenance activity officer. A log record that is illegible, lost, damaged, soiled, or precludes further entries due to lack of space, will be replaced upon the next inspection, as applicable, with a serviceable item from stock.
 - b. **Assembly completeness.** Ensure the applicable assembly is complete and that no components (or parts) are missing.
 - c. **Operational Adequacy.** Check the item components and parts to ensure proper assembly, which includes attachment and alignment, and that the assembled product functions in the prescribed manner. Further ensure that no stitch formation (or sewn seam) has been omitted.
 - d. **Markings and Paint.** Inspect each assembly and associated components for faded, illegible, obliterated, or missing informational data, identification numbers, and warning marks. Also check for chipped, worn, or peeled paint, as applicable.

- e. **Foreign Material and Stains.** Inspect each assembly and related components for the presence of dirt or similar type foreign material. Also check for evidence of mildew, moisture, oil, grease, pitch, resin, or contamination by salt water.
2. **Detailed Inspection.** In addition to the overall inspection performed in (1) above, a detailed inspection will be performed on the materials that constitute the assembly or component construction using the following criteria, as applicable:
 - a. **Metal.** Inspect for rust, corrosion, dents, bends, breaks, burrs, rough spots, sharp edges, wear, deterioration; damaged, loose, or missing grommets, safety pins, connector snap, eye hook, pack fastener; improper swaging or welding; loss of spring tension; and missing or loose screws.
 - b. **Cloth.** Inspect for breaks, burns, cuts, frays, holes, rips, snags, tears; loose, missing, or broken stitching or tacking; weak spots, wear, or deterioration.
 - c. **Fabric tape, webbing, and cordage.** Inspect for breaks, burns, cuts, frays, holes, snags, tears, incorrect weaving, and sharp edges formed from searing; loose, missing, or broken stitching, tacking, whipping, and weaving; weak spots, wear, and deterioration.
 - d. **Pressure-sensitive (adhesive) tape.** Inspect for burns, holes, cuts, tears, weak spots; looseness and deterioration.
 - e. **Rubber and elastic.** Inspect for burns, cuts, holes, tears, weak spots; loss of elasticity and deterioration.
 - f. **Felt.** Inspect for cuts, tears, burns, breaks, holes, and thin spots.
 - g. **Leather.** Inspect for burns, cuts, holes, tears, loose missing or broken stitching; thin spots and deterioration.

IN STORAGE INSPECTION

An in-storage inspection is a physical check conducted on a random sample of air delivery equipment that is located in storage. The purpose of the inspection is to ensure that the item is ready for issue, that the item is properly identified and segregated from other types of equipment, that no damage or deterioration of the equipment has been incurred, and that all modifications or similar action requirements have been completed. The inspection shall also concern the methods and procedures applied to the storage of air delivery items, the adequacy of storage facilities, efforts of pest and rodent control, and protection against unfavorable climatic conditions. Air delivery equipment that is in storage will be inspected at least semiannually and at more frequent intervals if prescribed by the local parachute maintenance officer. The frequency of inspection may vary according to the type of storage facilities and local climatic conditions. Only parachute rigger personnel designated by the local parachute maintenance officer will conduct in-storage inspections.

Equipment Disposition

Air delivery equipment may be rendered unserviceable by either normal fair wear or by aging, and will subsequently be repaired, modified, or condemned, as appropriate. Equipment that is economically repairable (outdated) will be condemned. Disposition of air delivery equipment that is condemned, unserviceable, or for which serviceability is questionable, will be accomplished using the following procedures as applicable:

1. **Item requiring repair or modification.** An air delivery item that requires repair or modification will be tagged in accordance with DA Pam 738-751. Subsequent work will be performed on the item at the

maintenance level specified for the maintenance function in the applicable supporting technical publication.

2. **Equipment with exhausted age or service life.** Any component or air delivery equipment whose age or service life has expired as specified in TB 43-0002-43 will be removed from service, condemned and tagged as prescribed by DA PAM 738-751.
3. **Disposition of Condemned Air Delivery Equipment.** Condemned equipment, other than fatality parachutes, will be removed from service and disposed of in accordance with current directives listed in this WP.
4. **Rejected equipment.** Equipment which, prior to use is deemed unserviceable will be reported in an Equipment Improvement Recommendation (EIR) in accordance with DA PAM 738-750, as authorized by AR 750-1. Each applicable item that is defective will be held and safeguarded pending receipt of disposition instructions from the National Maintenance Point (NMP). In all instances, EIR exhibit material will be handled as prescribed in DA PAM 738-750. If the quality or the serviceability of an item is questionable, clarification and assistance may be obtained by contacting Commander, U.S. Army Soldier and Biological Chemical Command, ATTN: AMSSB-RIM-E(N), Kansas Street, Natick, MA 01760-5052.
5. **Equipment of Doubtful Serviceability.** Equipment that has had previous use and has not exceeded normal fair wear or aging criteria, but of which further serviceability is doubtful, will be tagged as prescribed in DA PAM 750-751. In addition, the equipment will be reported in an EIR, in accordance with DA PAM 738-750 and AR 750-1. The item(s) in question will be held as EIR exhibit material as outlined in DA PAM 738-750 pending receipt of disposition instructions from the NMP. A maintenance activity holding EIR exhibit material will not tamper with the applicable item(s) or make any attempt to ascertain cause factors. Unnecessary handling of EIR exhibit material may disturb or alter peculiar aspects of the affected item(s) that might affect the judgment of engineering personnel who have the responsibility for final evaluation of EIR actions.
6. **Equipment immersed in salt-water.** Any air delivery item constructed from cotton material that has been immersed in salt-water will be condemned. Cotton thread used for tacking and sewing on nylon that has been immersed in salt-water will only be replaced when there is visible evidence or deterioration such as extreme discoloration or indications of broken thread. Any air delivery equipment constructed of nylon or rayon material that has been immersed in salt-water for a period less than 24-hours, but which cannot be rinsed within 48-hours after recovery will also be condemned unless the following actions can be performed. Upon removal from the salt water, the parachute is placed in a single heavy duty plastic trash bag, the top of the bag securely closed and kept in a wet state until a rinse can be performed following normal rinse procedures. The bag must be doubled when outside temperatures exceed 85 degrees F. The bags must be inspected after transport and storage to insure the bag did not get torn and the assembly allowed to dry. Parachutes recovered using this method must be rinsed no later than 7 days after the salt water immersion or be condemned. However, if the cited time limitations can be met, then immediately upon recovery, suspend or elevate the recovered equipment in a shaded area and allow the item(s) to drain for at least 5-minutes. Do not attempt to wring the equipment fabric. Within 48-hours after recovery, under the supervision of a qualified parachute rigger (92R), rinse the recovered equipment as indicated in WP 0009 00.

END OF WORK PACKAGE

UNIT MAINTENANCE

ANCILLARY EQUIPMENT FOR PERSONNEL PARACHUTE SYSTEM

CLEANING AND DRYING

INITIAL SETUP:**Tools**

N/A

Personnel Required

92R(10) Parachute Rigger

Materials/Parts

Brush, Scrub Household (WP 0052 00, Table 1, Item 2)

Cloth, Abrasive (WP 0052 00, Table 1, Item 4)

Dishwashing Compound (WP 0052 00, Table 1, Item 15)

Rag, Wiping (WP 0052 00, Table 1, Item 27)

Equipment Condition

Laid out on packing table or other suitable surface.

CAUTION

If, during the cleaning, there exists a possibility that the substance to be removed contains acid or some other equally destructive ingredient, the item will be evacuated to intermediate maintenance activity for determination as to the nature of the substance and item disposition. If the substance cannot be identified, or if normal repair procedures will not eliminate all traces of chemical or acid damage, the applicable item will be condemned.

NOTE

Cleaning of fabric items should be held to a minimum and should be performed only when necessary, to prevent malfunction or deterioration. When fabric item(s) contains debris, or when it is soiled by dirt, oil, grease, rust, corrosion, or other foreign substances, to such an extent that cleaning is necessary, the cleaning should be performed manually and should be limited to the soiled area only, unless the fabric items has been contaminated by water. The methods of cleaning must be determined by the nature of the substance to be removed. Do not use cleaning solvent to clean items soiled by airsickness. Use a solution of hand dishwashing compound to clean this type of soiling.

CLEANING FABRIC ITEMS WITH A SOLUTION OF HAND DISHWASHING COMPOUND

Use dishwashing compound to clean fabric items as follows:

1. Gently brush with a soft bristle brush.
2. Spot clean with a solution of dishwashing compound.
 - a. Dissolve one-half cup of dishwashing compound in one-gallon of warm water.
 - b. Rub the soiled area with a clean cloth dampened with a solution of dishwashing compound.

- c. Rinse the cleaned area by repeating the rubbing process, with a clean portion of the cloth dampened with water.

RINSING FABRIC ITEMS IMMERSSED IN SALT WATER

If the fabric items, or any of its components, has been immersed in salt water in excess of 24-hours it will be condemned. Additionally, if the fabric items, or any of its components, has been immersed in salt water for a period less than 24-hours, but cannot be rinsed within 48-hours after recovery, it will also be condemned unless the following actions can be performed. Upon removal from the salt water, the parachute is placed in a single heavy duty plastic trash bag, the top of the bag securely closed and kept in a wet state until a rinse can be performed following normal rinse procedures. The bag must be doubled when outside temperatures exceed 85 degrees F. The bags must be inspected after transport and storage to insure the bag did not get torn and the assembly allowed to dry. Parachutes recovered using this method must be rinsed no later than 7 days after the salt water immersion or be condemned. However, if the cited time limitations can be met, then immediately upon recover, suspend or elevate the fabric item assembly in a shaded area and allow it to drain for at least 5-minutes. Do not attempt to wring the fabric. Within 48-hours after recovery, under the supervision of a qualified parachute rigger (92R), rinse the recovered fabric item assembly as follows:

1. Place the fabric items in a large watertight container filled with a suitable amount of fresh, clean water to cover the assembly.

NOTE

If the salt-water-soaked fabric item is too large to be placed into a rinsing container, then the rinsing process will be affected by applying fresh, clean water to the assembly using a hose.

2. Agitate the container contents by hand for 5-minutes.
3. Remove the fabric item from the container and suspend or elevate it in a shaded area, allowing a 5-minute drainage period. Do not attempt to wring the fabric.
4. Repeat the procedures in steps 1. through 3. above, twice, using fresh, clean water for each rinse.
5. After the third rinse, allow the fabric item to drain thoroughly. Upon completion of draining, dry the assembly in accordance with the DRYING FABRIC ITEMS procedures, below.
6. When dried, perform a technical/rigger-type inspection of the fabric items. Corroded metal components, or corrosion-stained fabrics, will be either repaired or replaced as prescribed by the Maintenance Allocation Chart (MAC) in WP 0034 00.
7. Record any repair, immersion, and rinsing in the parachute log record as shown in WP 0004 00.

RINSING FABRIC ITEMS IMMERSSED IN FRESH WATER

Any fabric item, or its components, that has been immersed in a fresh water lake, river, or stream will not require rinsing unless it has been ascertained that the water is dirty, oily, or otherwise contaminated. Procedures for handling a fresh water immersed fabric item are as follows:

1. **Contaminated freshwater.** If the fabric item, or its components, has been immersed in contaminated freshwater, rinse and dry (see RINSING FABRIC ITEMS IMMERSSED IN SALT WATER, above), and, if applicable, repair.
2. **Uncontaminated freshwater.** If the fabric item, or its components, has been immersed in uncontaminated freshwater, it will be cleaned and dried as outlined in CLEANING FABRIC ITEMS WITH A SOLUTION OF HAND DISHWASHING COMPOUND, DRYING FABRIC ITEMS, and CLEANING METAL ITEMS, in the detailed paragraphs above and below. Minor discoloration of fabric items, resulting from immersion in uncontaminated fresh-water, may occur.

NOTE

Fabric items will not be dried in direct sunlight or by laying an item on the ground.

DRYING FABRIC ITEMS

Dry fabric items as follows:

1. Suspend or elevate the item in a well-ventilated room or in a heated drying room.
2. Using electric circulating fans may reduce drying time.
3. When heat is used, the heat temperature shall not exceed 160 degrees Fahrenheit (71 degrees Celsius). The preferred temperature is 140 degrees Fahrenheit (60 degrees Celsius).

CLEANING METAL ITEMS

Clean metal items as follows:

CAUTION

Use care not to damage the adjacent fabric materials.

1. Remove burrs, rough spots, rust, or corrosion from metal items by filing with a metal file, or by buffing and polishing with abrasive cloth.
2. Remove all oils and filings by brushing and cleansing with dishwashing compound. Allow to dry.

AIRING

Where dampness and mildew are prevalent, air delivery equipment will be aired at frequent intervals according to the severity of the prevailing conditions. Items that have been previously packaged or are unpackaged, and have been subjected to conditions of dampness or mildew, will be aired for a period of at least 6-hours prior to being repackaged. Air delivery items may be aired either indoors or outdoors, in dry weather. However, fabric items will not be aired in direct sunlight. Suspending or elevating the applicable item(s) in a manner that would allow maximum exposure to air circulation may accomplish airing. Outside facilities may be used for the airing of air delivery equipment if weather conditions permit. If the shakeout facilities are inadequate for airing, the applicable item(s) may be suspended or elevate at several points, or draped over suitable type objects that will not cause damage.

WP 0032 00

REPAIR**NOTE**

Sewing requirements will vary according to the type of item being repaired and the type of repair being made. The type of sewing machine, type of thread, the stitch range, and the stitch pattern (if applicable) required to accomplish a sewing procedure will be specified in the paragraph applicable to the item being repaired. All original stitching that is cut during the performance of a sewing procedure will be removed from the applicable item. Immediately after the accomplishment of a machine sewing procedure, trim thread ends to a point as close as possible to the material that has been sewn.

NOTE

Repair and replacement of ancillary equipment is performed in accordance with the repair instruction in this section and in specific paragraphs applicable to the item being repaired. Fabrication is a means of replacing an air delivery item component that is damaged beyond repair and not an issue item. Though the act of fabrication is a replacement-type action, the function is actually a method of repairing an end item. Since most fabrication pertains to components that are peculiar to ancillary equipment, the fabrication of components that are most general in nature will be detailed in the following paragraphs.

BASTING AND TEMPORARY TACKING

Basting and temporary tacking are hand-sewing methods used to temporarily hold layers of cloth fabric together while a repair is being performed. The following is a list of procedures that apply to basting and temporary tacking actions:

1. Basting and temporary tacking should be made using thread that is of a contrasting color to the material being worked.
2. Basting and temporary tacking will be performed using a single strand of size A, nylon thread, or ticket No. 24/4 cotton thread.
3. When basting, do not tie knots at any point in the thread length. Also, the sewing should be made with two stitches per inch.
4. Immediately upon completion of a repair, remove previously made basting or temporary tacking.

STITCHING AND RESTITCHING

Perform stitching and restitching as follows, refer to Tables 1 and 2.

1. The stitching and restitching of ancillary equipment should be accomplished with thread that is contrasting in color to the fabric being restitched. If contrasting color thread is not available, thread of matching color may be used, providing all other specifications are met. Straight stitching and restitching on parachute canopy assemblies should be locked by at least 1/2-inch at each end of a stitch row, when possible. Zig-Zag stitching does not require locking; however, zig-zag restitching should extend at least 1/2-inch into undamaged stitching at each end, when possible. Keep proper thread tension when possible to prevent loose bobbin thread, and excessively tight stitching resulting in puckering of the materials sewn. The stitching lock should be embedded in the center of the material. When restitching, stitch directly over the original stitching and follow the original stitch pattern as closely as possible.

DARNING

(Refer to Tables 1 and 2). Darning is a sewing procedure used to repair limited size holes, rips, and tears. A darning repair may be made either by hand or by sewing machine, depending upon the method preferred and the availability of equipment. However, a darning machine should be used to darn small holes and tears where fabric is missing. A darning repair will be performed using the following procedures, as appropriate:

Machine darning. Proceed as follows:

1. Using an authorized marking aid of contrasting color, mark a square around the damaged area and ensure the marking is at least $\frac{1}{4}$ inch back from each edge of the damaged area.
2. Darn the damaged area by sewing the material in a back and forth manner, using size A or E nylon thread.
3. Turn the material and stitch back and forth across the stitching made in b., above, until the hole or tear is completely darned.

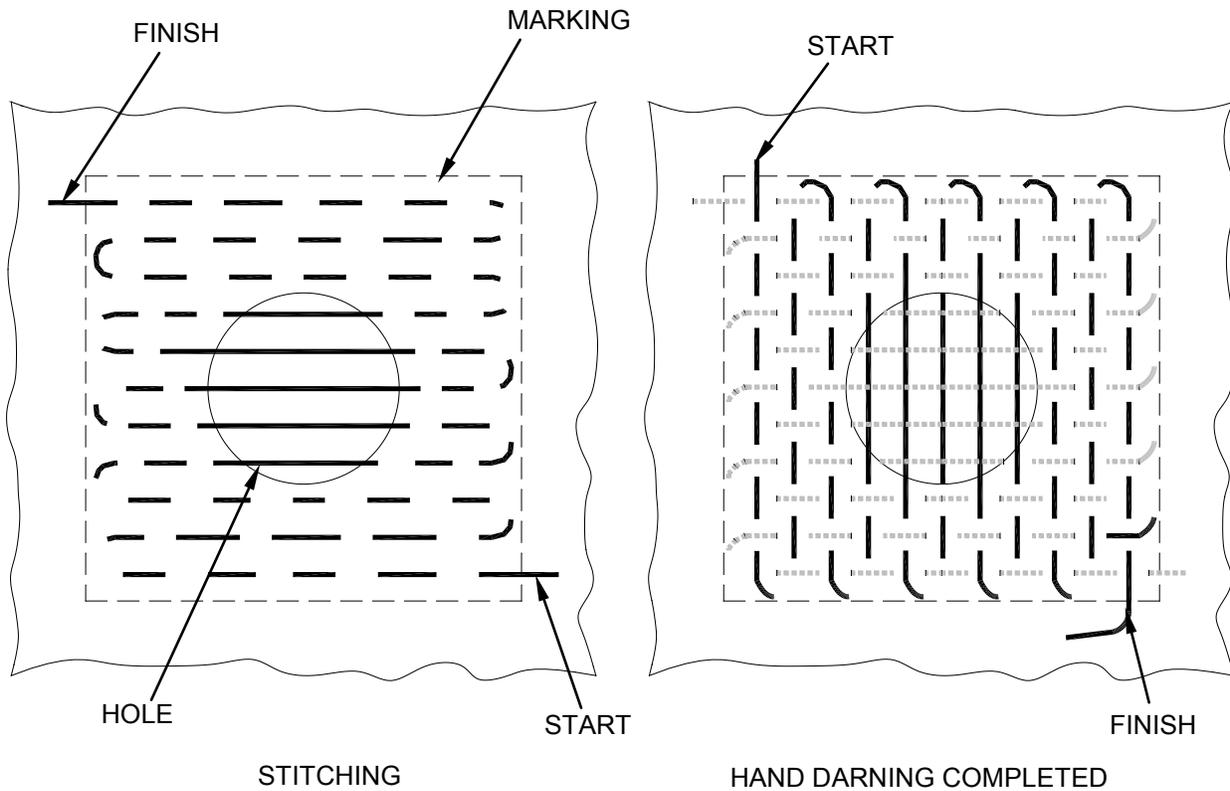

BACK AND FORTH
STITCHING IN BOTH
DIRECTIONS

4. If applicable, restencil informational data, or identification marks using the criteria in WP 0014 00.

Hand darning. When repair of a hole or tear is made by hand darning, the darn should match the original weave of the damaged material as closely as possible. Hand darning will be performed as follows:

1. Using an authorized marking aid of contrasting color, mark a square around the damaged area and ensure the marking is at least ¼ -inch back from each edge of the damaged area.
2. Using a darning needle and a length of size A or E nylon thread, begin darning at one corner of the marked area. Working parallel with the marking, pass the needle and thread back and forth through the material until the opposite diagonal corner of the marked area is reached.
3. Turn the material and weave the needle and thread back and forth across the stitching made in b., above, until the hole is completely darned.

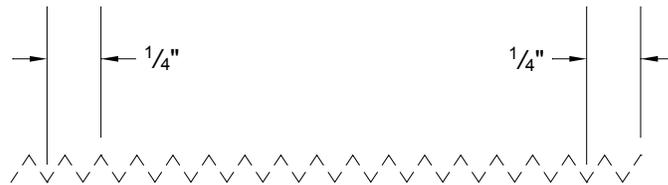

4. If applicable, restencil informational data or identification marks as outlined in WP 0014 00.

ZIG-ZAG SEWING

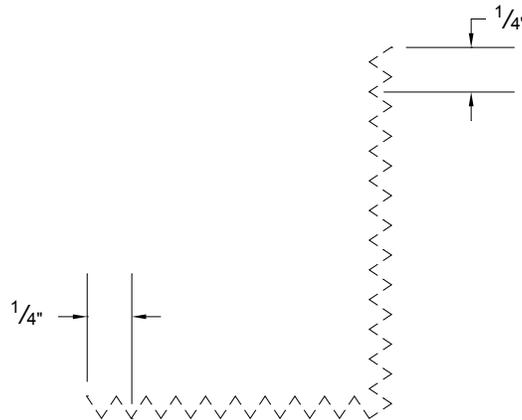

(Refer to Tables 1 and 2). Ancillary Equipment for Parachute Systems, that have sustained cut or tear damage, may be repaired by zig-zag sewing, provided the applicable damaged area does not have any material missing and the cut or tear is straight or L-shaped. Should the damaged area be irregular shaped or have material missing, the repair will be achieved by either darning or patching, as required. A zig-zag sewing repair will be accomplished using a zig-zag sewing machine, with the following procedures:

1. Set the sewing machine to the maximum stitch width.
2. Beginning at a point ¼ -inch beyond one end of the cut or tear, stitch lengthwise along the damaged area to a point ¼ -inch beyond the opposite end of the cut or tear.

Straight Cut Or Tear Stitching

3. The cited stitching procedure will also apply to an L-shaped cut or tear.

L-Shaped Cut Or Tear Stitching

4. If applicable, restencil informational data or identification marks as prescribed in WP 0014 00.

PATCHING

Patching is a procedure used to repair holes that cannot be darned.

Patching limitations. The following is a list of patching limitations for Ancillary Equipment for Personnel Parachute Systems:

WARNING

The limitations prescribed for patching will be stringently adhered to under all circumstances and without any deviations. Failure to do so may result in failure of an ancillary item causing death or serious injury to personnel.

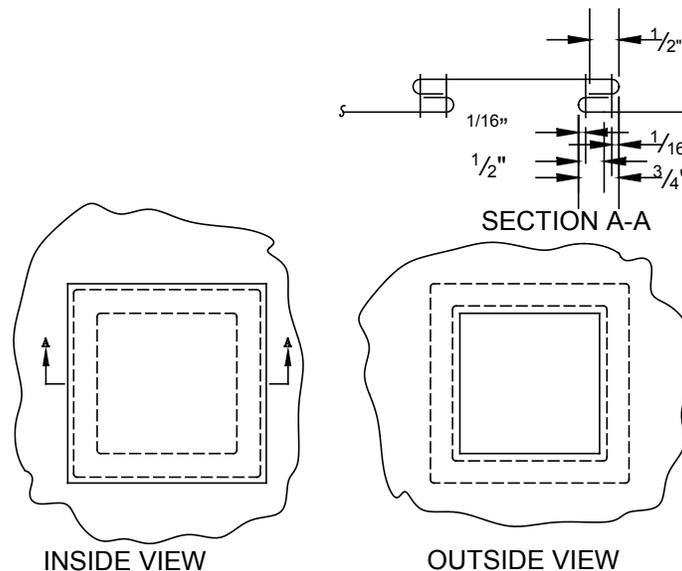

1. A patch will not be applied to a damaged area that has been previously patched.
2. There is no limitation to the number of patches, or size of patch, made to each area. However, determination should be made as to the most economical method to be used, i.e., two or more patches versus one large patch, or damage that would require replacement.

Making a basic patch. A basic patch is used to repair damaged cloth when the affected area is no closer than 1-inch from a seam. Should a damaged area be closer than 1-inch to the cited areas, a miscellaneous patch will be made.

NOTE

A basic patch will be square or rectangular in shape.

The basic patch. The primary method of applying a basic patch is by sewing. When using this method of patching, the patch will be applied to either the inside or the outside.

Apply a sewn patch as follows:

1. Place the repairable item on a repair table, smooth the fabric around the damaged area, and secure the item to the table with pushpins. Do not pin the damaged area.
2. Using an authorized marking aid of contrasting color, mark a square or rectangle around the area to be patched.
3. Cut the damaged fabric area along the lines made in 2., above. Further, cut the fabric diagonally at each corner to allow a 1/2 -inch foldback in the raw edges.

4. Make a ½ -inch foldback on each raw edge. Pin and baste each foldback to complete the prepared hole. Basting will be performed using the procedures in the BASTING AND TEMPORARY TACKING paragraph detailed above.
5. Using the same type of material as in the original construction, mark and cut a patch 2 ½ -inches wider and longer than the inside measurements of the prepared hole.
6. Center the material over the prepared hole. Pin the patch material in position.
7. Make a ½ -inch foldunder on each edge of the patch material, and baste the patch to the prepared area. Basting will be performed using the procedures in the BASTING AND TEMPORARY TACKING paragraph detailed above.
8. Remove the pushpins securing the canopy to the repair table; secure the patch by stitching, using the applicable details in the STITCHING AND RESTITCHING paragraph and figure detailed above. Make the first row of stitching completely around the patch. Turn the canopy over and make a second row of stitching around the prepared hole. Stitching will be performed in accordance with the STITCHING AND RESTITCHING paragraph detailed above.
9. If applicable, restencil informational data according to procedures in WP 0014 00.

Applying a miscellaneous patch. A miscellaneous patch, which may be irregularly shaped, is used to repair damaged material when the location of the damaged area requires the patch to extend into (or over) a seam or reinforcement. Ascertain the type of patch required for the item, using the details in illustrations following the patch procedures detailed below. Apply a miscellaneous patch as follows:

NOTE

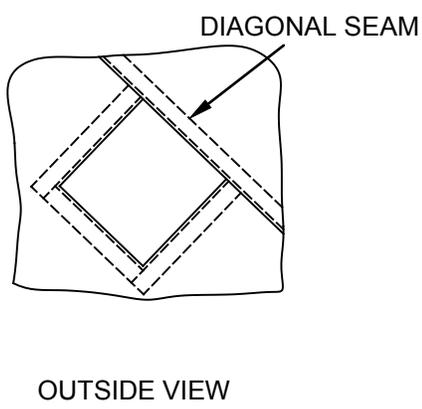

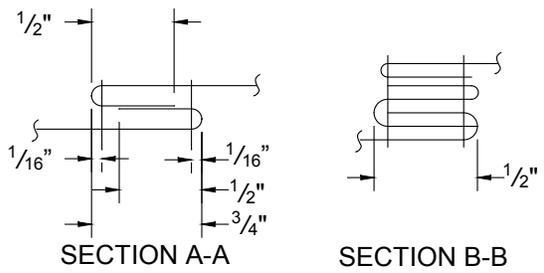

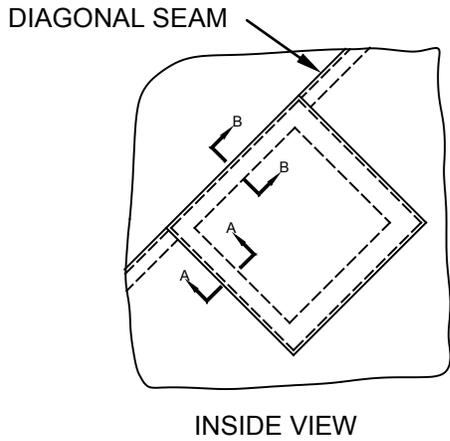

A section that cannot be patched with a basic patch, as outlined in paragraph 2., above, will be patched with a miscellaneous patch.

1. Place the item on a repair table; smooth the fabric around the damaged area, and secure the damaged area to the table with pushpins. Do not pin the damaged area.
2. As required, cut the applicable stitching to remove or lay aside items that may interfere with the patching process.
3. Using an authorized marking aid of contrasting color, mark a rectangle or triangle around the damaged area. Make the mark ½ -inch from any adjacent seam or reinforcement.
4. Prepare the damaged area by cutting along the marks made in c., above. Also make a diagonal cut at each corner of the formed hole to permit a foldback of each raw edge.
5. To complete hole preparation, make a ½ -inch foldback of each raw edge. Pin and baste each edge foldback; use the procedures in the BASTING AND TEMPORARY TACKING paragraph detailed above.
6. Using the same type of material as in the original construction, mark and cut a patch 2 ½ -inches wider and longer than the inside measurements of the prepared hole.
7. Center the patch material over the prepared hole. Pin the patch material in position.

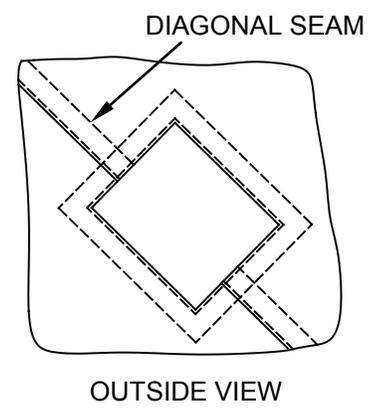

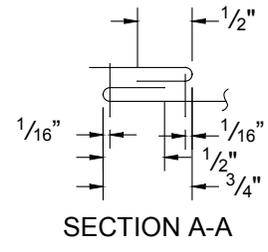

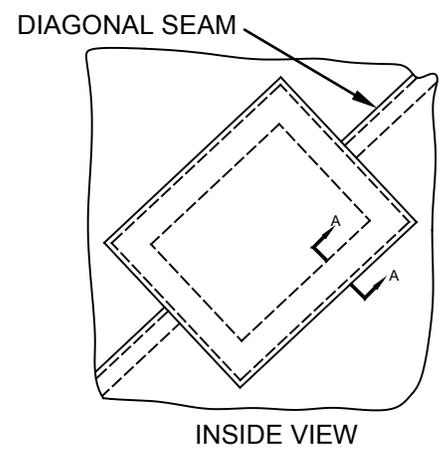

8. Make a ½ -inch fold under on each edge of the patch material and baste the patch to the prepared area. Basting will be performed using the procedures in the BASTING AND TEMPORARY TACKING paragraph detailed above.
9. Remove the pushpins securing the item to the repair table and secure the patch by stitching according to the details in the stitching specifics outlined in Tables 1 and 2.
10. Make the first row of stitching completely around the edges of the patch. Turn the item right-side-out (or vice versa) and make a second row of stitching around the edges of the prepared hole. Stitching will be performed in accordance with the STITCHING AND RESTITCHING paragraph detailed above.
11. If applicable, restencil informational data according to procedures in WP 0014 00.

NOTE

If the outside of a seam is damaged, cut away the seam in the damaged area and patch as a basic patch.

Pot, Melting, Electric (WP 0034 00, Table 2, Item 10)
Knife, Hot, Metal (WP 0034 00, Table 2, Item 7)

Personnel Required

92R(10) Parachute Rigger

Materials/Parts

Beeswax, Technical (WP 0052 00, Table 1, Item 1)
Wax, Paraffin, Type I, Technical (WP 0052 00, Table 1, Item 52)

Equipment Condition

Unpacked

CAUTION

Cotton tape, webbing, or cord will not be seared. These products burn rather than melt. Serious damage will result.

NOTE

Fabric materials such as cord, tape, and webbing, that are cut for use in the maintenance of ancillary equipment will normally be heat-seared or dipped in melted wax mixture, as applicable, to prevent the material from fraying or unraveling. However, in some instances, the preparation of the material may not be necessary and will be specified accordingly.

SEARING

The cut ends of nylon tape, webbing and cord lengths may be prepared by heat-searing, which is performed by pressing the raw end of the material against a hot metal surface (knife) until the nylon has melted sufficiently. Avoid forming a sharp edge or lumped effect on the melted end.

WAXING

The fraying or unraveling of cotton or nylon tape, webbing, and cord length ends may be prevented by dipping ½ inch of the raw end of the material into a thoroughly melted mixture of half beeswax and half paraffin in an electric melting pot. The wax temperature should be substantial enough to ensure the wax completely penetrates the material, rather than just coating the exterior fabric.

END OF WORK PACKAGE

ANCILLARY EQUIPMENT FOR PERSONNEL PARACHUTE SYSTEM

MARKING AND RESTENCILING

INITIAL SETUP:

Tools

N/A

Personnel Required

92R(10) Parachute Rigger

Materials/Parts

Brush, Stenciling (WP 0052 00, Table 1, Item 3)
Ink, Marking (WP 0052 00, Table 1, Item 21)
Marker, Felt Tip, Black (WP 0052 00, Table 1, Item 25)
Pen, Ball Point (WP 0052 00, Table 1, Item 26)
Stencil Board, Oiled (WP 0052 00, Table 1, Item 29)

Equipment Condition

Laid out on packing table or other suitable area.

NOTE

Stenciling should be used whenever possible. A ballpoint pen or felt tip marker should be used only where stenciling is not possible, or when stenciling devices are not available. Any type ballpoint pen using black or blue ink may be used for marking on labels only.

Original stenciled data or marking that becomes faded, illegible, obliterated, or removed as a result of performing a repair procedure, will be remarked with a ballpoint pen, felt tip marker, or restenciled. All marking or restenciling will be done on, or as near as possible to, the original location and should conform to the original lettering type and size.

MARKING

Using marking devices, such as a ballpoint pen or felt tip marker, mark on, or as near as possible to, the original location and conform to the original lettering type and size.

RESTENCILING

Proceed as follows:

1. Cut oiled stencil board to match the original lettering type and size of data to be restenciled.
2. Place cut stencil board over, or as near as possible to, the original marking to be restenciled.
3. Place an additional sheet of stencil board beneath the area to be restenciled to prevent the marking ink from penetrating to other areas.
4. Hold the stencil board in place and, using the stenciling brush filled with parachute marking ink, restencil the original marking.

REMARKING AND RESTENCILING

Remark/restencil the original stenciled data/markings that become faded, illegible, obliterated, or that have been removed as a result of performing a repair procedure. Ensure all marking/restenciling is on, or as near as possible to, the original location, and conforms to the original lettering type and size.

RE-STENCILING AND RE-PAINTING

Painted markings on airdrop equipment that are chipped or worn will be repainted with the same color enamel paint. Metal and wood items may be repainted as required.

END OF WORK PACKAGE

ANCILLARY EQUIPMENT FOR PERSONNEL PARACHUTE SYSTEM

SNAP FASTENER AND GROMMETS
REPAIR, REPLACE

INITIAL SETUP:

Tools

Diagonal Pliers (WP 0034 00, Table 2, Item 4)
Double Bow Cutter (WP 0034 00, Table 2, Item 5)
Lead Pig (WP 0034 00, Table 2, Item 8)
Press, Hand Operated (WP 0034 00, Table 2, Item 11)
Punch and Die for O-Grommets (WP 0034 00, Table 2, Item 12)
Rawhide Mallet (WP 0034 00, Table 2, Item 13)
Single Bow Cutter (WP 0034 00, Table 2, Item 21)

Personnel Required

92R(10) Parachute Rigger

Materials/Parts

Specified in paragraph applicable to the item being repaired.

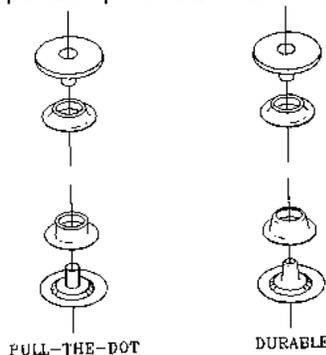

Equipment Condition

Unpacked. Canopy with defects recorded.
Clean.

Replacing Snap Fastener Assemblies. A snap fastener assembly is a four piece metal fitting used to secure flaps and tabs on parachute packs and harnesses. Two of the metal parts, the socket and clinch plate, or the button (cap) and socket, are installed on opposite sides of a flap or tab. The remaining two metal parts, the stud and the washer or stud and post, as applicable, are installed in a corresponding position on the main panel or body. The flap or tab is closed by snapping the mating parts together. The two types of snap fastener assemblies used on airdrop equipment are the pull-the-dot, and the durable as shown below. Repair or replace a defective snap fastener assembly using the following procedures, as appropriate:

REPAIR

1. Repairs to Felt Lining. If felt lining is not damaged, darn or stitch as specified through lining. If felt lining is damaged, plug the felt material as described in the repair procedure for the applicable end item.
2. The only repair that may be performed on a snap fastener assembly is reseating of the fastener which will be accomplished using the applicable procedures and tools prescribed in paragraph (2) below.

REPLACE

Replacement. A snap fastener assembly which is defective or cannot be reseated will be replaced with a serviceable item from stock. However, if only one part of a fastener is defective, such as the socket or stud, just that particular portion of the fastener assembly will necessitate replacement. Remove and replace a damaged snap fastener as follows:

1. Original snap fastener removal.
 - a. Cut the crimped edge of the applicable snap fastener assembly apart at three or four points with diagonal nippers.
 - b. Using a suitable type tool, pry back the fastener-crimped edges and remove the applicable defective fastener parts.
2. Repair and preparation of the original snap fastener area.
 - a. If the fabric area around the original snap fastener has been damaged, repair the area by darning, and the stitching specifics prescribed WP 0012 00. However, if darning does not provide and adequate repair, construct a suitable sized reinforcement to the inside of the damaged area using patching procedures and the stitching specifics described in WP 0012 00.
 - b. After repair of the fabric in the original snap fastener area has been completed, further preparation of the repaired area may be required according to the following criteria:
 - (1) When the replacement action involves a socket and clinch plate of a lift-the-dot snap fastener assembly, cut an appropriate sized hole in the repaired material to accommodate the size of the replacement fastener clinch plate and socket. Cutting the material will be accomplished using a rawhide mallet or other non-steel impact device, lead cutter block, and a lift-the-dot fastener cutter.
 - (2) Normally, the replacement of a lift-the-dot fastener assembly stud and washer, a pull-the-dot snap fastener assembly, or a durable snap fastener assembly does not require cutting of a fabric area prior to component installation. However, if a situation occurs which necessitates fabric cutting to accommodate any of the cited assemblies, the cutting process will be accomplished using a mallet and a lead cutter block as described in step (i), above and an appropriate sized double or single bow cutter.
 - c. Snap fastener installation
 - (1) General. Installation of a snap fastener may be performed by three different methods. The most common method is the hand-held method that requires the use of a leather mallet or other no-steel impact device, a holder to hold the appropriate sized chuck, and an anvil which is used to contain a compatible sized die. A second method of installing a snap fastener assembly is by use of the hand-operated press, the chuck or die are individually secured in position by a threaded screw that is tightened by using a suitable sized key (Allen-type hexagon wrench) or a flat-tip (common head) screwdriver, as applicable. The third method of snap fastener installation is by use of the foot-operated press which, except for the means of operation, functions similar to the hand-operated press.
 - (2) Installing a durable or pull-the-dot snap fastener assembly by the hand-held method.

- (3) Select the appropriate size die and chuck required for installing the fastener cap and socket or stud and post, as applicable.
- (4) Place the selected chuck in the open end of the holder and secure the chuck in place using the locking screw located on one side of the holder. Further place the appropriate die into the anvil.

NOTE

In most instances a chuck will be installed in the hand held holder and a die will be placed in the anvil. However, there may be some occasions that require the location of the chuck and die to be reversed. This situation may also apply to the hand or foot-operated press.

- (5) Fit the socket or stud, as applicable, on the chuck lower end. Place the cap or post, as applicable, on the die with the barrel facing up.
- (6) Position the material over the barrel of the cap or post, as applicable. Insure that the fastener socket or stud, as applicable, will be located on the proper side of the material for subsequent fastener engagement.
- (7) Place the socket or stud, as applicable, on the barrel of the cap or post, as applicable. With an applied strike from a mallet, clinch the two snap fastener components to the material.
- (8) Remove the clinched snap fastener components from the chuck and die set and check the seating of the joined components. If the applicable components are not properly seated, repeated the procedure in step (2) and (7) above.
- (9) Check the engagement of the installed snap fastener components with the opposite mating components with the opposite mating components to insure the open and closed snapping process is accomplished without hindrance. If the snap engaging process cannot be accomplished without difficulty, replace the opposite mating snap fastener components using the procedures in steps (2) through (7) above.

NOTE

A durable snap fastener assembly will open and close from any direction. A pull-the-dot snap fastener assembly will open and close from only one direction. A lift-the-dot snap fastener assembly will open and close from only one direction.

- (10)As required, remove the chuck and die from the applicable snap fastener tools by reversing the procedures in step (5) above.
- d. Hand or foot operated press method. Installation of durable or pull-the-dot snap fastener assemblies by hand or foot operated press can be accomplished by using the procedures in paragraph 1 above, except the chuck and die will be secured within the applicable press assembly using the available locking screws.
 - e. Installing the lift-the-dot snap fastener assembly.

- (1) Hand held method.

- (a) Using the specifics in table 2-4, ascertain the size chuck and die required the fastener socket and clinch plate or stud and washer. As applicable.
- (b) Place the selected chuck in the open end of the holder and secure the chuck in place using the locking screw located on one side of the holder. Further, place the appropriate die into the anvil.
- (c) Fit the socket (with prongs facing down) or stud (with barrel facing down) on the lower end of the chuck. Place the clinch plate or washer, as applicable on the die.
- (d) Position the material over the clinch plate or washer, as applicable.
- (e) Align the socket prongs with the pre-cut holes in the material or the barrel of the stud at the center of the material-covered washer, as applicable. With an applied strike from a mallet, clinch the two snap fastener components to the material.
- (f) Remove the clinched snap fastener components from the chuck and die set and check the seating of the joined components. If the applicable components are not properly seated, repeat the procedure in e above.
- (g) Check the engagement of the installed snap fastener components to insure the open and closed snapping process cannot be accomplished without difficulty, replace the opposite mating snap fastener components using the procedures in steps a through f, above.

NOTE

A lift-the-dot snap fastener assembly will open and close from only one direction.

- (2) Hand or foot operated press methods. Installation of a lift-the-dot snap fastener assembly by hand or foot operated press may be accomplished using the procedures in paragraph above, except the chuck and die will be secured within the applicable locking screws.

Replacement of Grommets. A grommet is a two piece metal eyelet used to reinforce and protect textile material at a point where a hole has been made to permit the threading of a line, chord, webbing or the insertion of a retainer device. The three types of grommets used on air-drop equipment are the flat, plain, and spur, each of which is installed with an applicable type washer. Repair or replace a defective grommet using the following procedures, as appropriate.

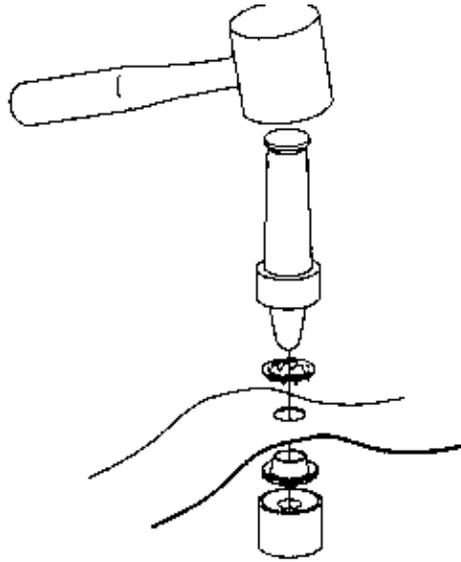

1. Repair. Remove burrs, rough spots, rust, or corrosion from an installed grommet by filing with a metal file or by buffing with a crocus cloth.
2. Reseat a loose grommet by using the applicable procedures described under grommet replacement.
3. Replacement. A grommet which is damaged or cannot be reseated will be replaced with a serviceable grommet and washer of the same size and type from stock and the following procedures, as applicable:

-
- a. Original grommet removal. Using a suitable type tool, lift the edge of the original washer at one point.
 - b. Grip the lifted washer edge with diagonal nippers and roll the washer edge back to lift the washer from the original grommet. Remove the original grommet from the material.
 - c. If the fabric area around the original grommet has been damaged, repair the area by darning, using the procedures in WP 0012 00. However, if darning does not provide an adequate repair, construct a suitable sized reinforcement of the same type material as that used in the original grommet location. Secure the reinforcement to the inside of the damaged area using the patching procedures in WP 0012 00.
 - d. Using a single or double bow cutter that is compatible with the size of the replacement grommet, a lead cutter block, and a rawhide mallet or other non-steel impact device, cut a hole in the repaired fabric area to accommodate the barrel of the replacement grommet. Insure the hole is cut with a slightly smaller diameter than the diameter of the barrel of the replacement grommet.
 - e. Install a plain or spur grommet by the hand-held method which requires the use of a suitable sized punch and die, and a rawhide mallet or other non-steel impact device. A flat grommet should also be installed using the hand-held method, but may be installed using a hand- or foot-operated press and a suitable size chuck and die.

CAUTION

Tools used to install a grommet will be compatible with the size and type of grommet.

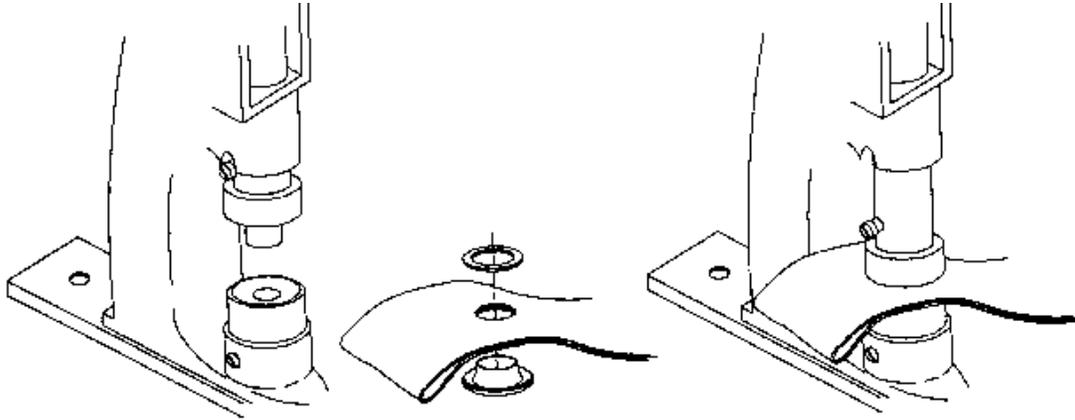

- f. Insert the barrel of the replacement grommet through the accommodating hole in the material and insure the grommet flange is located on the same side of the material as the original grommet.
- g. Position the grommet on a suitable sized die with the barrel facing up and place the applicable washer over the grommet barrel.

**NOTE**

When installing a flat grommet by the hand-held method, insure the grommet barrel and washer are aligned to preclude off-center setting of the grommet.

- h. Using a suitable sized punch and a rawhide mallet or other non-steel impact device, spread the grommet barrel by hammering as shown until the barrel collar is rolled down smooth on the washer. If the grommet barrel splits during the hammering process, remove and replace the installed grommet with a serviceable item from stock, subsequently repeating the procedures in f and g above.
- i. Check the seating of the grommet and if the grommet can be turned by hand, repeat the procedure in 3 above until the grommet is firmly seated.
- j. To install a flat grommet by hand-operated press install a suitable sized chuck and die on a hand- or foot-operated press. Secure the chuck and die in place using the available locking screws and a suitable sized key (Allen type hexagon wrench).
- k. Insert the barrel of the replacement grommet through the accommodating hole in the material as shown. Insure the flange of the replacement grommet is on the same side of the material as the original grommet.
- l. Position the grommet on the installed die with the barrel facing up and place the replacement washer over the grommet barrel.
- m. Depress the press handle or foot pedal and spread the grommet barrel until the collar of the barrel is rolled down smoothly on the washer.

- n. Check the grommet for a firm seating. If the grommet can be turned by hand, repeat the procedure in m above until a firm seating of the grommet is achieved.

END OF WORK PACKAGE

WORK PACKAGE 0016 00 WAS DELETED IN CHANGE 1

ANCILLARY EQUIPMENT FOR PERSONNEL PARACHUTE SYSTEM

ACCESSORY SET, SCUBA
INSPECT, SERVICE, REPLACE, INSTALL

INITIAL SETUP:

Tools

Knife (WP 0034 00, Table 2, Item 6)
Screwdriver, Flat tip (WP 0034 00, Table 2,
Item 14)
Shears (WP 0034 00, Table 2, Item 20)

Personnel Required

92R(10) Parachute Rigger

Materials/Parts

Cord, Nylon, OD nylon core Type III (WP 0052
00, Table 1, Item 13)
Tape, Pressure Sensitive, 2-inch (WP 0052 00,
Table 1, Item 40)
Thread, Nylon, Size 3 (WP 0052 00, Table 1,
Item 47)
Thread, Nylon, Size E (WP 0052 00, Table 1,
Item 50)
Thread, Nylon, Size 6 (WP 0052 00, Table 1,
Item 49)

Equipment Condition

SCUBA Accessory Set equipment components
removed from other parachute equipment.
Components must be clean, dry and separated.

INSPECT

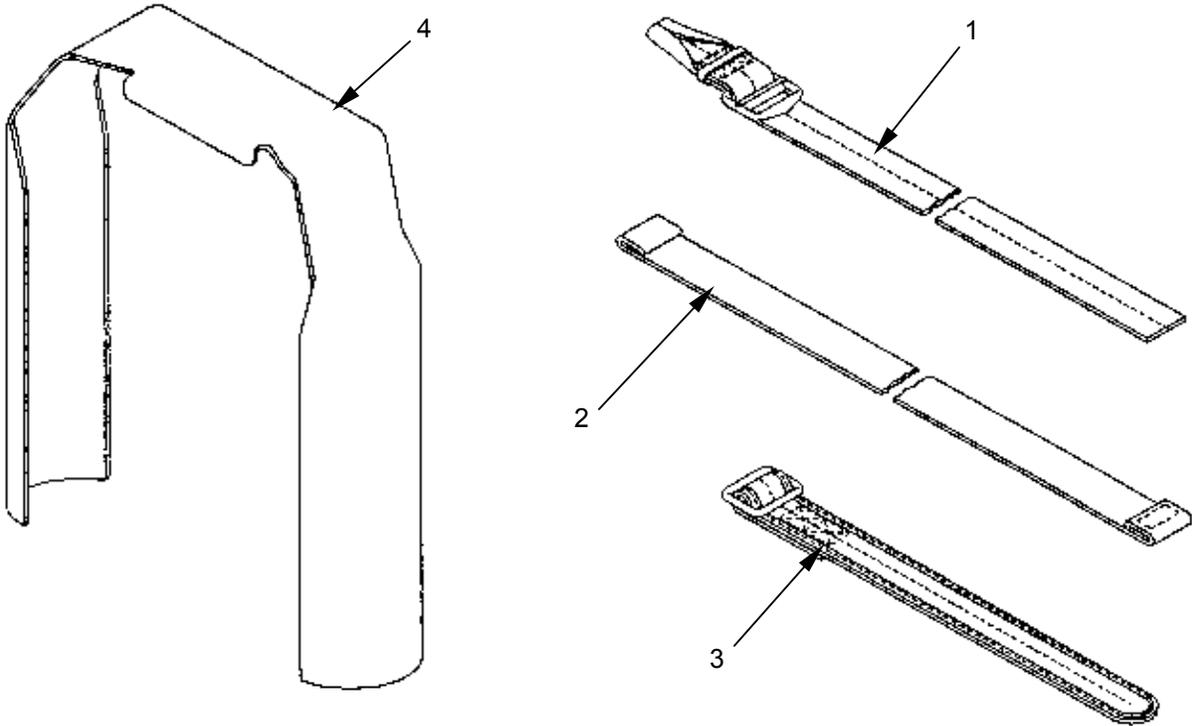

Perform a before and after repair technical/rigger type inspection of the scuba accessory set as outlined in WP 0008 00.

SERVICE

Wrap the center portion of the shield, if serviceable, prior to each use with 2-inch waterproof adhesive tape.

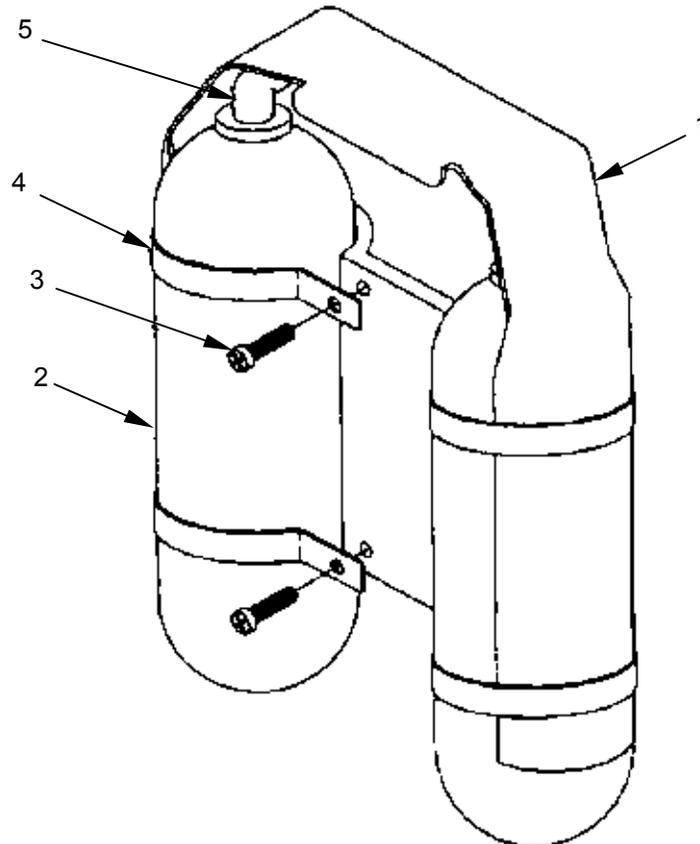

REPLACE

Replace damaged support straps (1), Backstrap Harness (2), or Waistband Extension Strap (3) with new items manufactured as described in WP 0053 00, or repair items by restitching where required. Replace a damaged shield (4) with a serviceable item from stock.

INSTALL

To install the shield (1) over the airtanks (2), loosen the two retaining screws (3) between the airtanks. Insert the ends of the shield between the outside of the airtanks and the metal straps (4). Push shield down over regulator valves (5), and tighten retainer screws (3).

 Tape, Fastener Pile (WP 0052 00, Table 1, Item 36)
 Tape, Nylon, Type III, 3/4-IN. (WP 0052 00, Table 1, Item 80)

Materials/Parts (Cont)

Tape, Fastener Pile (WP 0052 00, Table 1, Item 36)
 Thread, Nylon, Size 3 (WP 0052 00, Table 1, Item 47)
 Thread, Nylon, Size E (WP 0052 00, Table 1, Item 50)
 Webbing, Tubular, Nylon, 1-IN., Yellow (WP 0052 00, Table 1, Item 81)

INSPECT

Perform a before and after repair technical/rigger type inspection of the lowering line as outlined in WP 0008 00.

REPAIR**CAUTION**

Splicing of the lowering line and attaching web is not authorized. Serious equipment damage may occur due to failure of a spliced lowering line or attaching web.

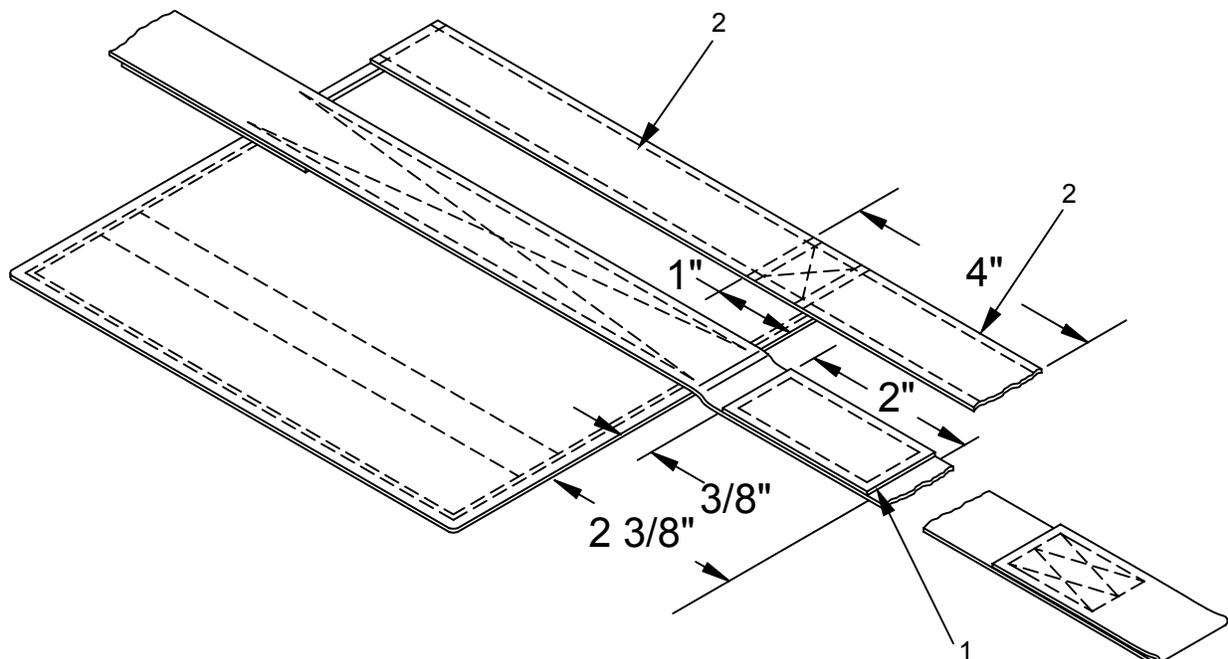

NOTE

If replacing the hook and pile fastener on the running end of the lowering line, reverse the location of both the hook and pile to prevent wear and tear of the lowering line.

Repair a lowering line and attaching web by restitching as required using size E thread, 7 to 11 stitches per inch and a LD sewing machine.

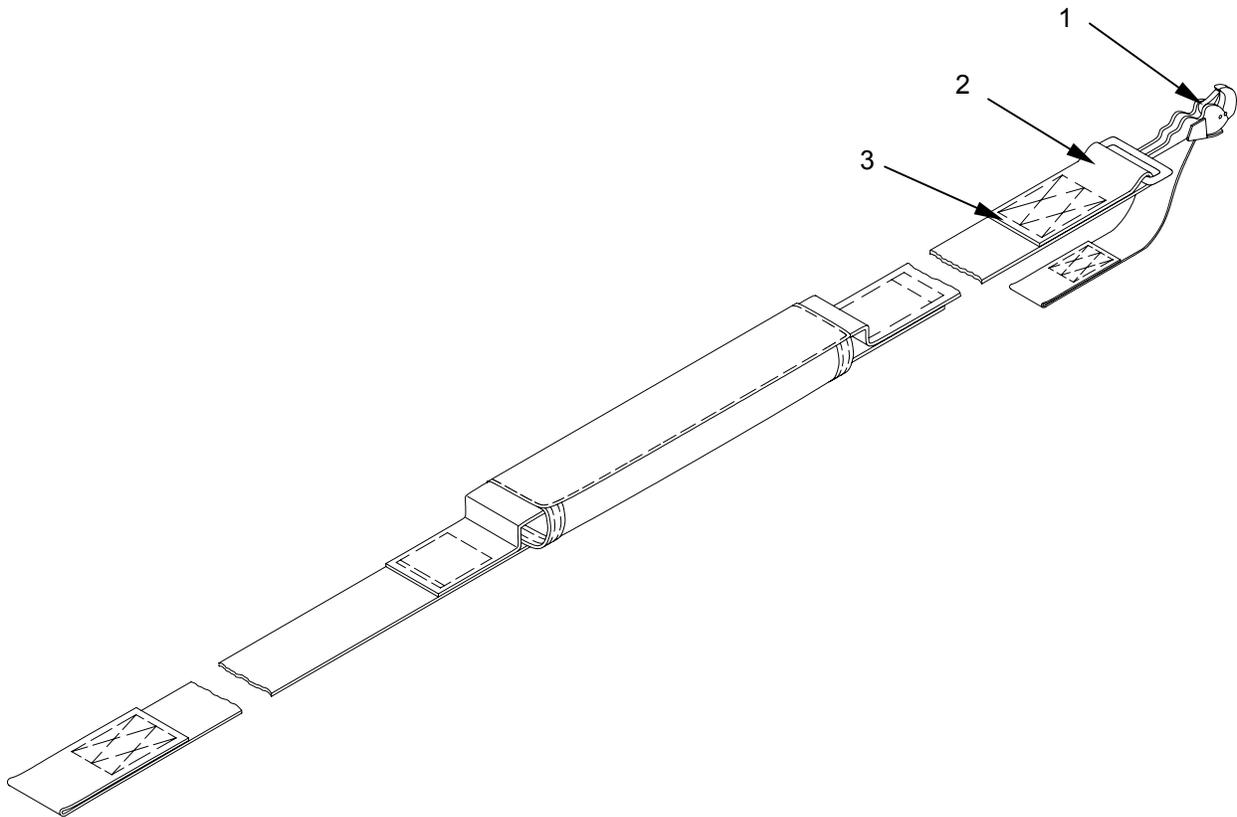

Replace the hook and pile fastener on the lowering line pocket as follows:

1. Remove damaged piece of hook **(1)** and/or pile **(2)** fastener.
2. Cut a new 2-inch length of hook tape **(1)**, and a new 4-inch length of pile tape.
3. Place a mark, $\frac{3}{8}$ -inch, and $2\frac{3}{8}$ -inches from the retainer binding on the folded loop side of the 1-inch wide lowering line.
4. With hook side facing up, position the 2-inch hook tape between the $\frac{3}{8}$ and the $2\frac{3}{8}$ -inch markings, and stitch with a single box stitch, using size E thread, 7 to 11 stitches per inch and a LD sewing machine.
5. Place a mark 1-inch from the binding edge on the pile flap retainer at the folded loop end of the lowering line.
6. With pile side facing up, position edge of 4-inch pile tape on 1-inch marking with opposite end extending over binding edge. Stitch to pile flap retainer with a single box X stitch using size E thread, 7 to 11 stitches per inch and a LD sewing machine.

REPLACE

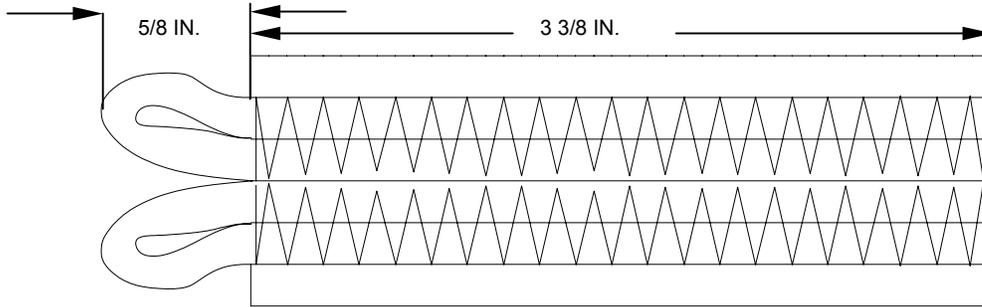

Replace the quick-ejector snap (1) by carefully cutting and removing stitching which secures the item to the lowering line (2). Place buffer (3) and lowering line (2) on serviceable quick-ejector snap (1) as in original and stitch with 3-inch, 3 point WW stitch using size 3 thread, 5 to 8 stitches per inch, and an HD sewing machine.

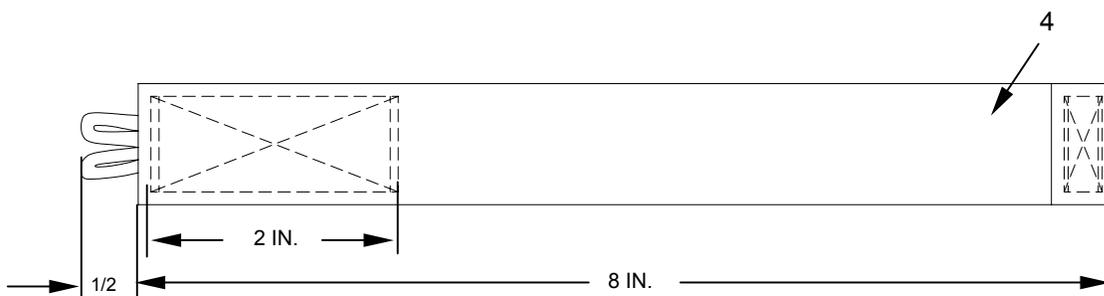

Replace the yellow pull to release lanyard (4) as follows:

1. Cut a 10 ½-inch length of yellow, 1-inch wide type I nylon webbing and sear both ends.
2. Cut a 5 ½-inch length of ¾-inch wide type III nylon tape.
3. Cut two 6 ¾-inch lengths type II nylon cord and sear both ends.
4. Fold the 5 ½-inch length of ¾-inch nylon tape in half.
5. Fold both lengths of the type II nylon cord in half and lay both lengths side by side on top of the ¾-inch nylon tape.

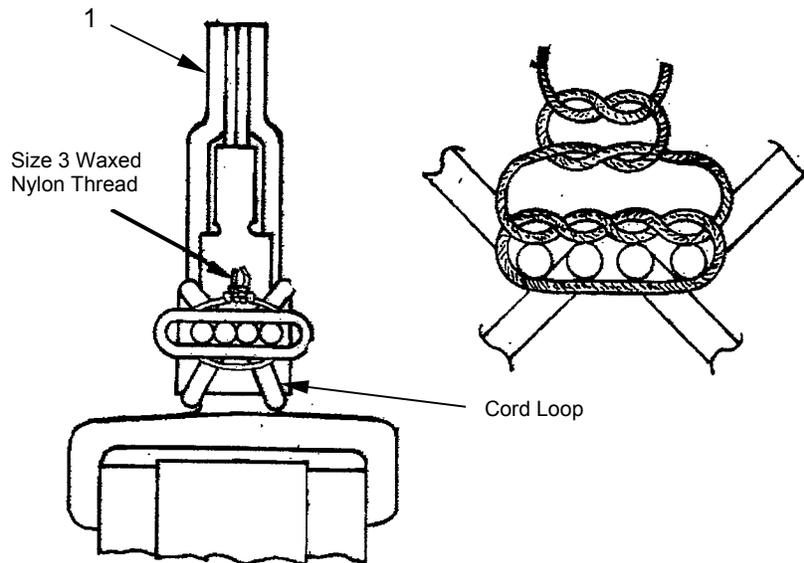

6. Ensure the folded edges of the type II nylon cord extend 5/8-inch over the folded edge of the 3/4-inch nylon tape.
7. With the nylon cord laid out side by side, stitch the cord to the tape using a zig zag sewing machine and size E nylon thread, 7 to 10 stitches per inch. The width of the zigzag will be 3/16-inch.

8. Retrieve the 10 1/2-inch length of yellow, 1-inch wide type I nylon webbing and place a mark 3/4-inch from one end and triple fold the webbing ensuring the final folded dimension measures 3/4-inch.
9. Stitch the folded edge with a single box X stitch formation 1/8-inch from each edge using size 3 thread, 5 to 8 stitches per inch and a MD sewing machine.
10. Insert the newly formed double loop sub-assembly into the opposite end of the 1-inch wide type I nylon webbing until 1/2-inch of the loop assembly is sticking out.
11. Stitch a 2-inch long single box X stitch formation 1/8-inch from the leading edge and maintain that 1/8-inch edge on the top and bottom of the webbing using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine.

12. Place each cord loop over each of the lever arms of the ejector snap (1) and position to the center.
13. Hand tie cord loops in the location shown with two turns of waxed nylon thread, size 3. Secure with a surgeons knot-locking knot and cut ends of thread to within ½-inch.

14. Replace any defective lowering line that cannot be repaired.

 Wax, Paraffin, Type I Technical, 1 lb (WP 0052 00, Table 1, Item 52)
 Beeswax, Technical, 1 Lb (WP 0052 00, Table 1, Item 1)
 Webbing, Nylon, Type VIII (WP 0052 00, Table 1, Item 61)
 Webbing, Nylon, Type X (WP 0052 00, Table 1, Item 62)
 Webbing, Nylon, Type II (WP 0052 00, Table 1, Item 57)

Equipment Condition

The parachutist jump pack should be clean and dry. Place the pack to be repaired on worktable.

INSPECT

Perform a before and after technical/rigger type inspection of the parachutist jump pack as outlined in WP 0008 00.

REPAIR

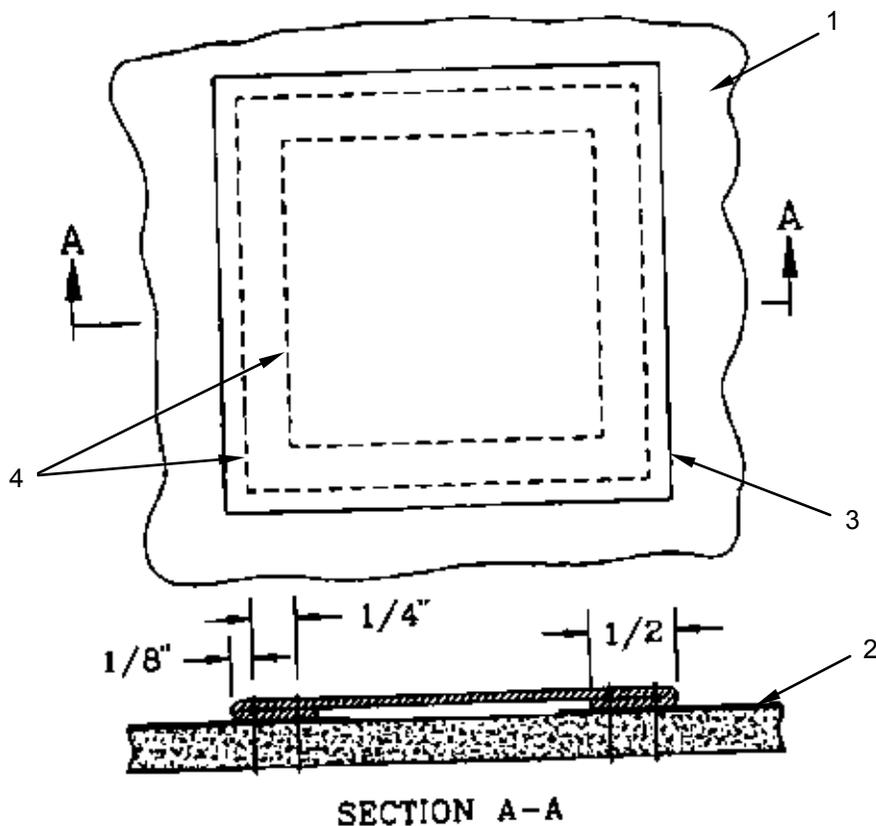

The cotton or nylon duck fabric of the pack may be restitched, darned, patched and plugged.

Restitching. Restitch the pack fabric (1) directly over old stitching using size 3 thread, 5 to 8 stitches per inch, and an HD sewing machine. Lock stitching at least 1/2-inch.

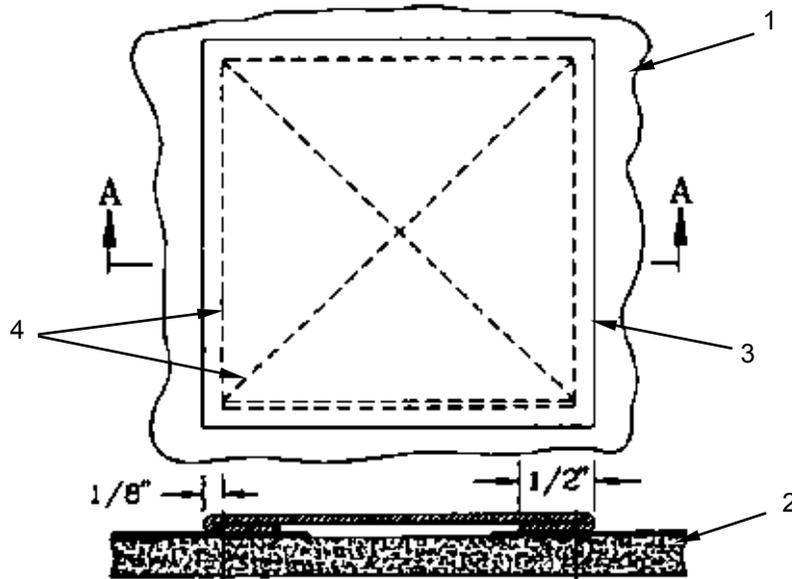

Darning. Darn a hole or tear in the pack fabric that does not exceed 1-inch in length or diameter using size E thread and a darning machine. There is no limit to darns that may be applied, provided they do not weaken or reduce the original strength of the fabric more than 10%. If damage is in the lined portion of the container body and only the cotton duck is damaged, darn through duck and felt. If felt is also damaged, remove damaged area before darning duck fabric. Then plug felt as in 3 below.

Patching. There is no limit to the number of times the container body may be patched. Patch a hole or tear that exceeds 1-inch in length or diameter following procedures in 1 or 2 below. Use nylon or cotton duck cloth according to original construction for patching outside, and 1/4-inch thick felt for plugging inside lining. Use a HD sewing machine, size 3 thread, and 5 to 8 stitches per inch.

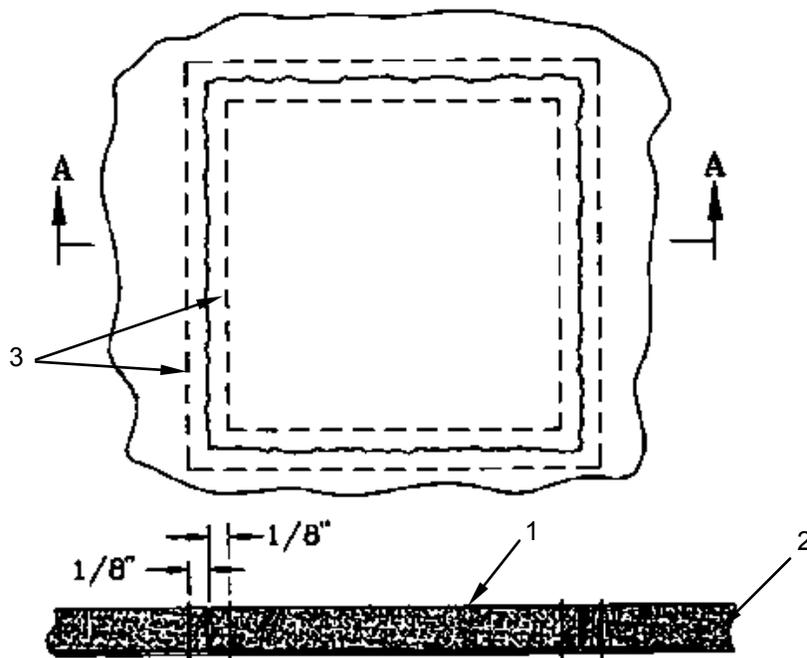

1. To patch a lined portion of the pack (1) when the felt (2) is not damaged, cut nylon or cotton duck patch (3) 2-inches beyond circumference of damaged portion. Turn under edges of patch 1/2-inch and center patch over damaged area. Sew patch to container body with a double row of stitching (4) as shown.

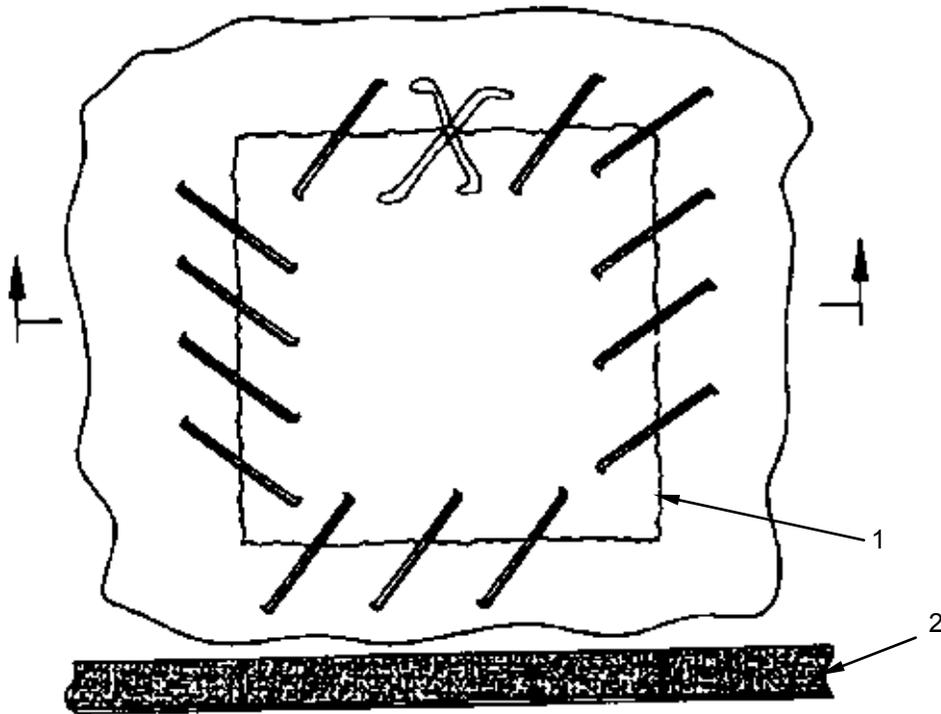

- To patch a lined portion of the pack (1) when the felt (2) is damaged, remove the damaged felt as described in 3 below. Cut a piece of felt (2) the same size as the piece removed, and position felt plug and cotton duck patch (3) (with edges turned under 1/2-inch) over damaged area. Sew a single box X stitch (4) formation as shown.

- To plug the main or end panels of felt (1) lining, mark a rectangle around the damaged area. Remove the damaged felt while being careful not to damage the cotton duck material (2). Cut a piece of felt (1) the size of the piece removed. Position felt plug into area cleared and sew as shown. Use size 3 thread, 5 to 8 stitches (3) per inch and a HD sewing machine.

4. If damage is in an area that cannot be sewed by machine, tack felt plug (1) securely to cotton duck (2) as shown using doubled and waxed size 3 nylon thread. Secure thread ends with suitable knot.

CAUTION

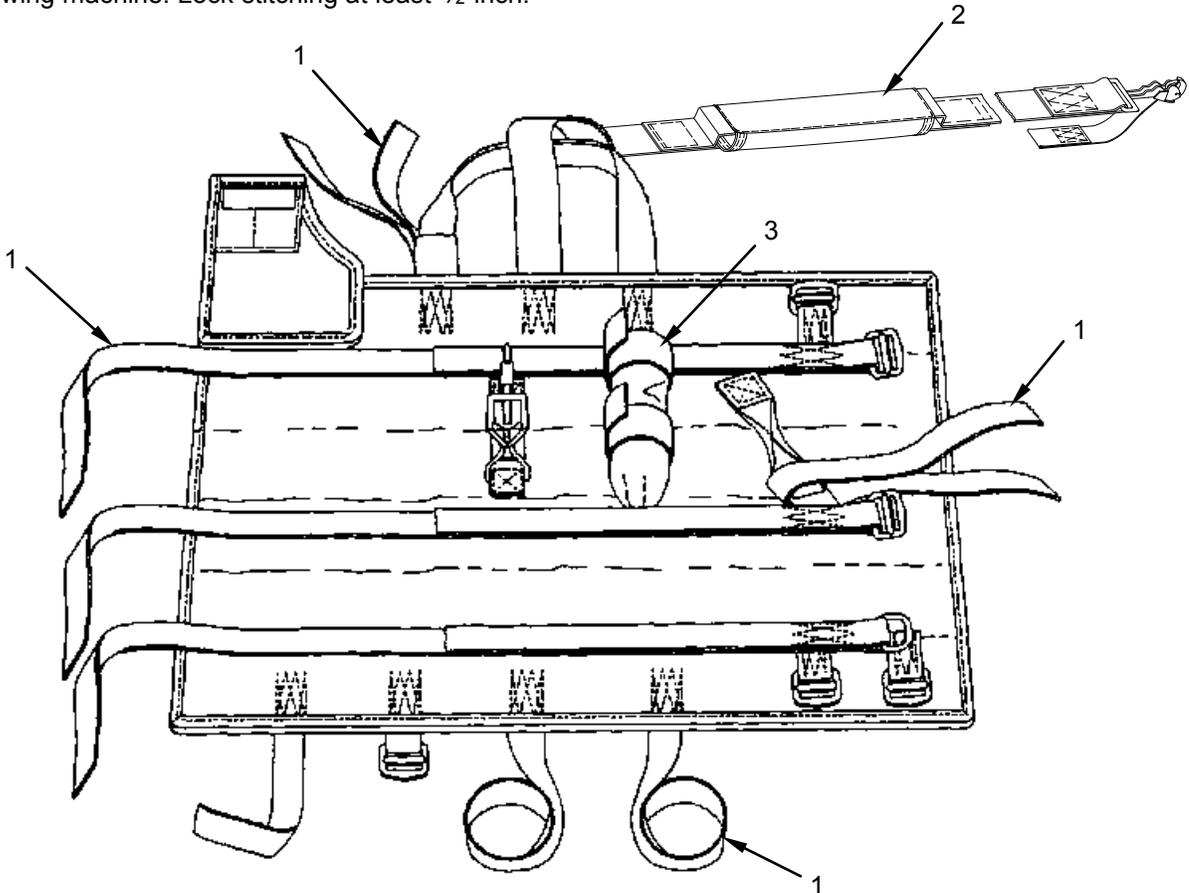

If webbing is inadvertently damaged when stitching is being removed, the webbing must be replaced in accordance with original construction.

Repair webbing items (1) by restitching. Use size 3 thread, 5 to 8 stitches per inch, and a HD sewing machine. Lock stitching at least $\frac{1}{2}$ -inch.

CAUTION

Splicing of the lowering line is not authorized. Serious equipment damage may occur due to failure of a spliced lowering line.

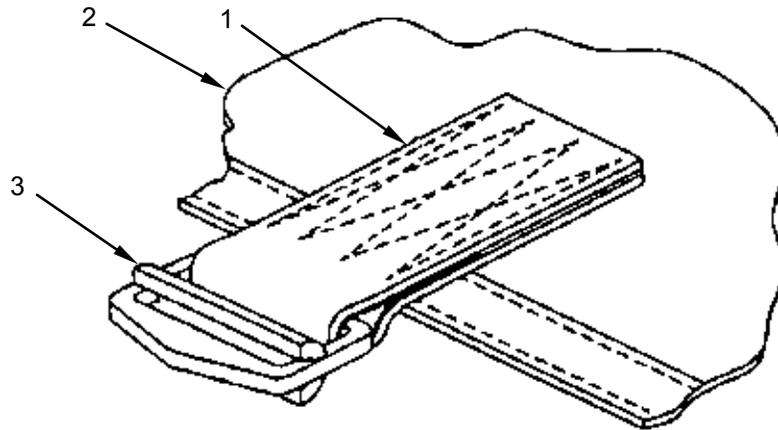

1. Repair lowering line (2) IAW WP 0018 00.
2. Repair lowering line pocket (3) by restitching. Use size 3 thread, 5 to 8 stitches per inch, and a HD sewing machine. Lock stitching at least $\frac{1}{2}$ -inch.

REPLACE

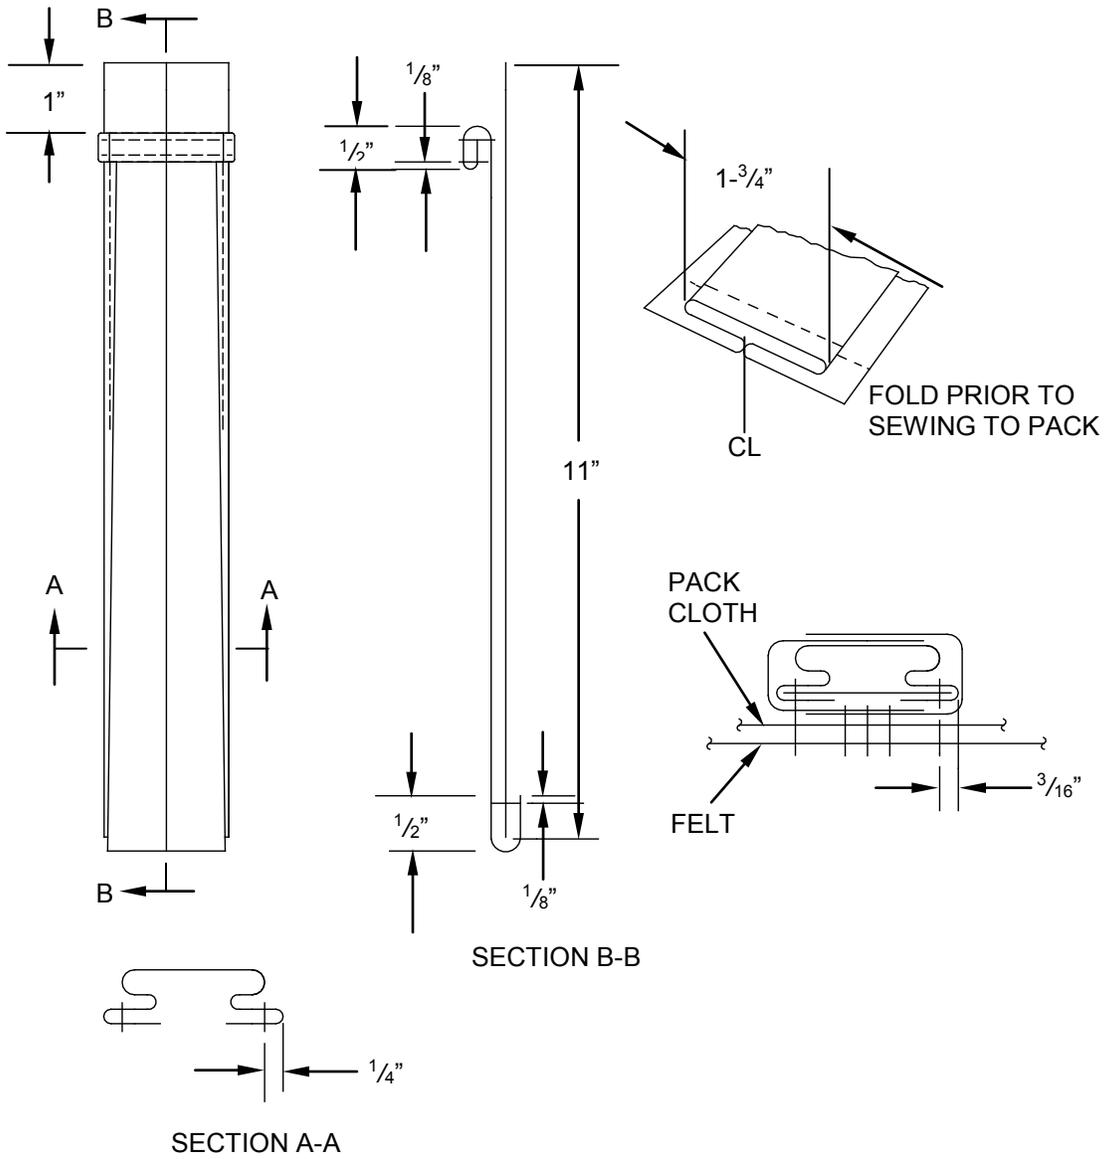

Replace webbing components in accordance with original construction as follows:

1. Carefully remove stitching that holds the item **(1)** to be replaced to the pack **(2)**. Remove damaged webbing and hardware **(3)** if applicable.
2. Cut new webbing material in appropriate length and type required, and install hardware if applicable. (Chapes, Side and rifle butt securing straps require Type VIII webbing; forward and aft cross straps require Type X, and the leg and upper tiedown require Type II webbing).

**CAUTION**

Splicing of the lowering line is not authorized. Serious equipment damage may occur due to failure of a spliced lowering line.

3. Turn under edges as in item removed. Place webbing on pack and sew using size 3 thread, 5 to 8 stitches per inch, and a HD sewing machine. Lock stitching at least $\frac{1}{2}$ -inch.
4. Replace a lowering line pocket, if it cannot be repaired by restitching. Fabricate new pocket as described in WP 0053 00, and sew to pack as shown using size 3 thread, 5 to 8, stitches per inch, and a HD sewing machine. Lock stitching at least $\frac{1}{2}$ -inch.

 Thread, Nylon, Size 3 (WP 0052 00, Table 1, Item 47)
 Thread, Nylon, Size E (WP 0052 00, Table 1, Item 50)
 Thread, Nylon, Size FF (WP 0052 00, Table 1, Item 51)
 Wax, Paraffin, Type I, Technical, 1 lb cake (WP 0052 00, Table 1, Item 52)
 Webbing, Nylon (WP 0052 00, Table 1, Item 61)
 Webbing, Nylon, Type IV (WP 0052 00, Table 1, Item 60)
 Webbing, Tubular, Nylon (WP 0052 00, Table 1, Item 75)
 Wire, Steel (WP 0052 00, Table 1, Item 77)

Equipment Condition

The harness assembly should be clean and dry.
 Place assembly on worktable.

INSPECT

Perform a before and after technical/rigger type inspection of the harness single point release as outlined in WP 0008 00.

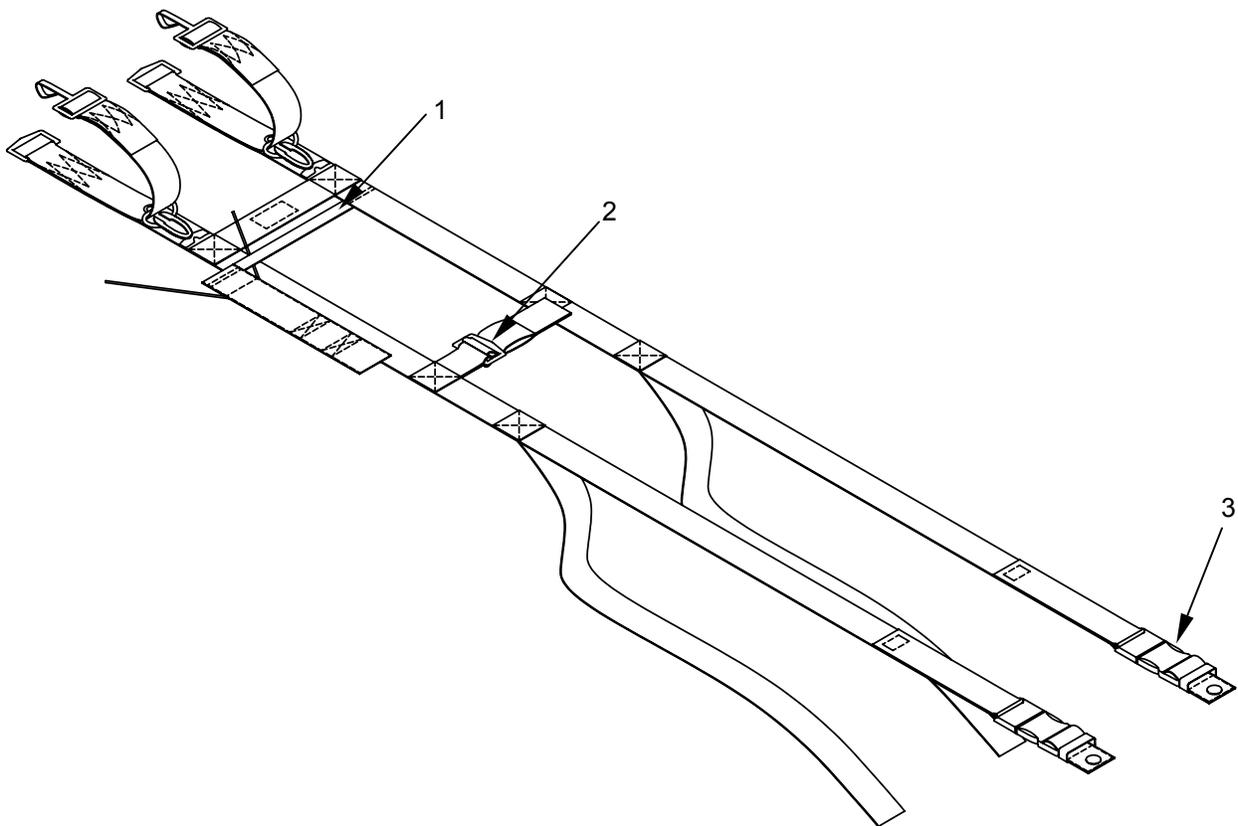

REPAIR

Repair harness webbing by restitching or darning. Splicing of webbing is restricted to the release handle lanyard (1) and straps not required to be adjusted through quick fit adapters (2) or side release buckles (3).

Restitching. Restitch the harness webbing directly over old stitching using size 3 thread, 5 to 8 stitches per inch, and a HD sewing machine. Lock stitching at least $\frac{1}{2}$ -inch.

Darning. Darn a tear in the harness webbing that does not exceed 1-inch in length or diameter using size E thread and a darning machine (DN or ZZ). There is no limit to darns that may be applied; provided they do not weaken or reduce the original strength of the webbing more than 10%.

Splicing. Cut a piece of $\frac{5}{8}$ -inch tubular or $1\frac{3}{4}$ -inch wide nylon webbing as appropriate, long enough to extend a minimum of 1-inch beyond each side of damaged area and sear ends as described in WP 0013 00. Center splicing material lengthwise over damaged area and stitch with a three point WW for the $\frac{5}{8}$ -inch tubular and 4 point WW pattern for the $1\frac{3}{4}$ -inch webbing the length of the splice.

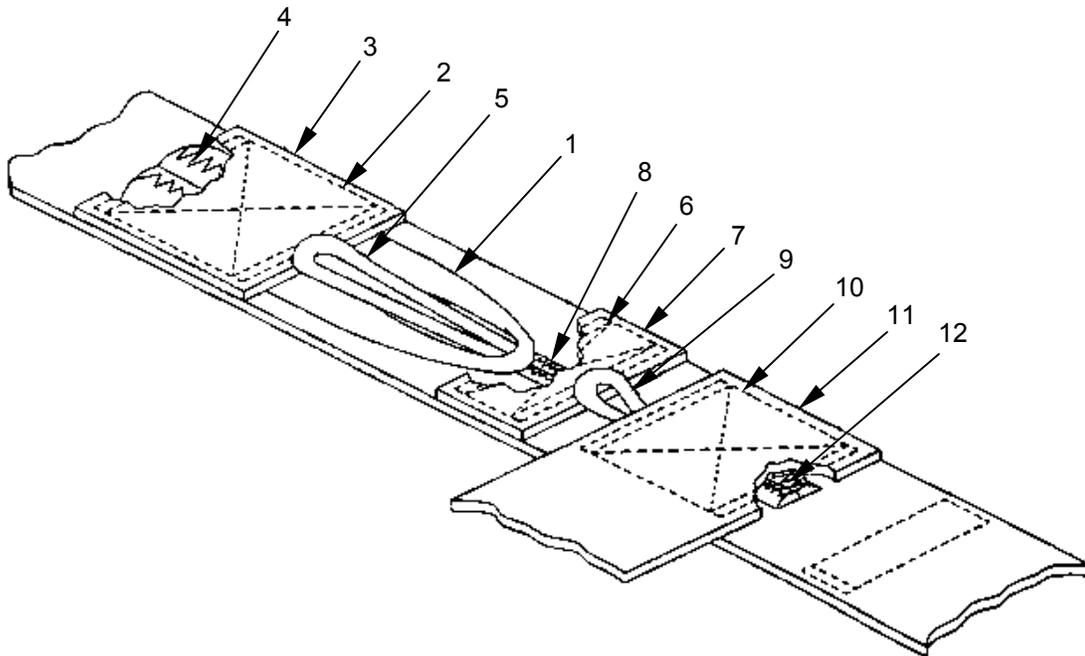

REPLACE

Replace a damaged cord loop "A", "B" or "C" as follows:

1. Replacement of cord loop "A" **(1)**.
 - a. Carefully cut and remove stitching **(2)** which secures the fixed web keeper **(3)** to the harness. Cut replacement Type VIII nylon web keeper **(3)** the length of the removed keeper **(3)** and sear ends.
 - b. Carefully cut and remove stitching **(4)** that secures the loop **(1)** to the harness in two places **(4)** and discard. Cut an 8 1/4-inch length of 5/8-inch width, natural color tubular nylon and sear ends.
 - c. Position tubular nylon loop **(1)** as in original location and stitch with double-throw zigzag or straight zigzag stitching, two places **(4)** forming loop. Use size E thread, 7 to 10 stitches per inch, and a ZZ sewing machine.
 - d. Position web keeper **(3)** 2 3/8-inches from outside edge of loop **(1)** as in original and stitch with double box X stitch pattern. Use size FF thread, 6 to 9 stitches per inch, and a MD sewing machine. The two plies of web keeper **(3)** shall be located on the loop side of the harness.

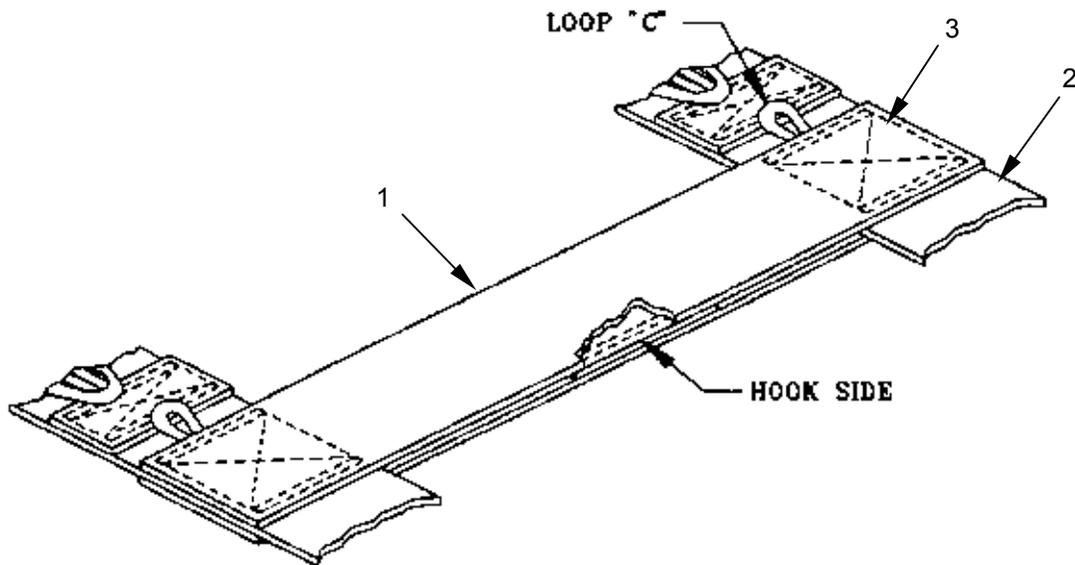

2. Replacement of cord loop "B" **(5)**.
 - a. Carefully cut and remove stitching **(6)** that secures the 1-inch wide fixed web keeper **(7)** to the harness. Cut replacement Type IV nylon web keeper **(7)** the length of the removed keeper and sear ends as described in WP 0013 00.
 - b. Carefully cut and remove stitching **(8)** that secures the loop **(5)** to the harness in two places **(8)** and discard. Cut a 6 1/2-inch length of Type III, CG-483 nylon cord and sear ends as described in WP 0013 00.
 - c. Position nylon cord **(5)** as in original location and stitch with double-throw zigzag or straight zigzag stitching **(8)**, two places forming loop. Use size E thread, 7 to 10 stitches per inch, and a ZZ sewing machine.
 - d. Position web keeper **(7)** 2 1/4-inches from outside edge of loop **(5)** as in original construction. The two plies of web keeper must be located on the loop side of the harness. Stitch with double box X stitch pattern **(6)**. Use size FF thread, 6 to 9 stitches per inch, and a MD sewing machine.

3. Replacement of cord loop "C" (9).
 - a. Carefully cut and remove stitching (10) that secures the cross strap (11) to the harness.
 - b. Carefully cut and remove stitching (12) that secures the loop (9) to the harness in two places (12) and discard. Cut a 5 1/4-inch length of Type III, red nylon cord and sear ends.
 - c. Position nylon cord (9) as in original location and stitch with double-throw zigzag or single-throw zigzag stitching (12), two places forming loop (9). Use size E thread, 7 to 10 stitches per inch, and a ZZ sewing machine.
 - d. Position cross strap (11) 7/8-inch from outside edge of loop with harness strap sandwiched between superimposed cross straps as in original construction and stitch with double box X stitch pattern. Use size 3 thread, 5 to 8 stitches per inch, and a HD sewing machine.

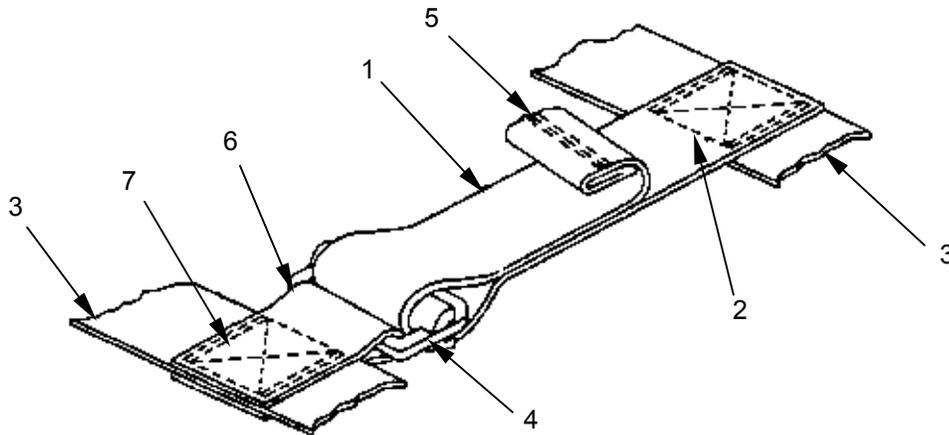

Replace damaged cross straps as follows:

1. Carefully cut and remove without damaging the "C" release loops, the double box X stitching which secures the cross straps **(1)** to the harness **(2)** on both sides.
2. Cut two 8 $\frac{3}{4}$ -inch lengths of Type VIII nylon webbing and sear ends.
3. Cut a 1 $\frac{1}{2}$ -wide X 2-inch long hook tape fastener.
4. On one cross strap, make a mark 4 $\frac{3}{8}$ -inches for the centerline location. From the centerline, make a 1-inch mark at each side.
5. Position replacement 2-inch long hook tape (facing up) between marks and stitch with two rows of box stitching **(3)**. Use size FF thread, 6 to 9 stitches per inch, and a MD sewing machine.
6. Place cross straps **(1)** together with hook tape on inside bottom layer, and with harness strap **(2)** sandwiched between superimposed cross straps as in original construction and stitch with double box X stitch pattern in two places. Use size 3 thread, 5 to 8 stitches per inch, and a HD sewing machine.

Replace a damaged adjustable cross strap, chape adapter or quick-fit adapter as follows:

1. Replacement of adjustable cross strap **(1)**.
 - a. Carefully cut and remove stitching **(2)** that secures the strap **(1)** to harness **(3)**. Remove adapter **(4)** from strap and discard.
 - b. Cut a 21-inch length of Type VIII nylon webbing and sear ends.
 - c. Position nylon webbing on bottom side of harness **(3)** as in original location and stitch with double box X stitch pattern **(2)**. Use size 3 thread, 5 to 8 stitches per inch, and a HD sewing machine.
 - d. Thread other end of webbing through quick-fit adapter **(4)** and fold end eight times (nine plies thick) 1 1/2-inches wide and stitch with three rows of stitching **(5)** located in the center. Use size 3 thread, 5 to 8 stitches per inch, and a HD sewing machine.
2. Replacement of chape adapter **(6)** or damaged quick-fit adapter **(4)**.
 - a. Carefully cut and remove stitching **(7)** which secures the chape adapter **(6)** to the harness **(3)** and discard chape adapter.
 - b. Cut a 5-inch length of Type VIII nylon webbing, sear ends and fold in center.

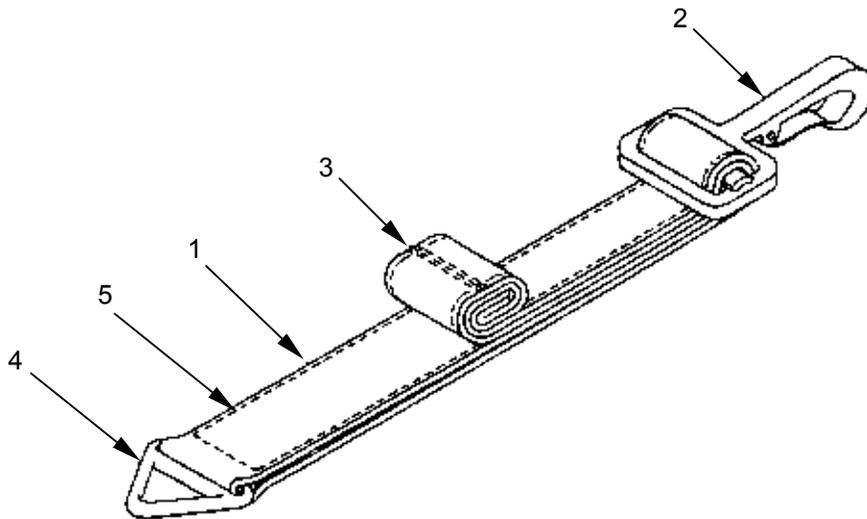

- c. Unthread folded end of adjustable strap (1) from quick-fit adapter (2).
- d. Place serviceable quick-fit adapter (4) on new chape adapter (6) with harness strap (3) sandwiched between superimposed web chape adapter (6) as in original construction and stitch with double box X stitch pattern (7). Use size 3 thread, 5 to 8 stitches per inch, and a HD sewing machine.

Replace a damaged Attaching Harness Strap (1) with a serviceable item from stock.

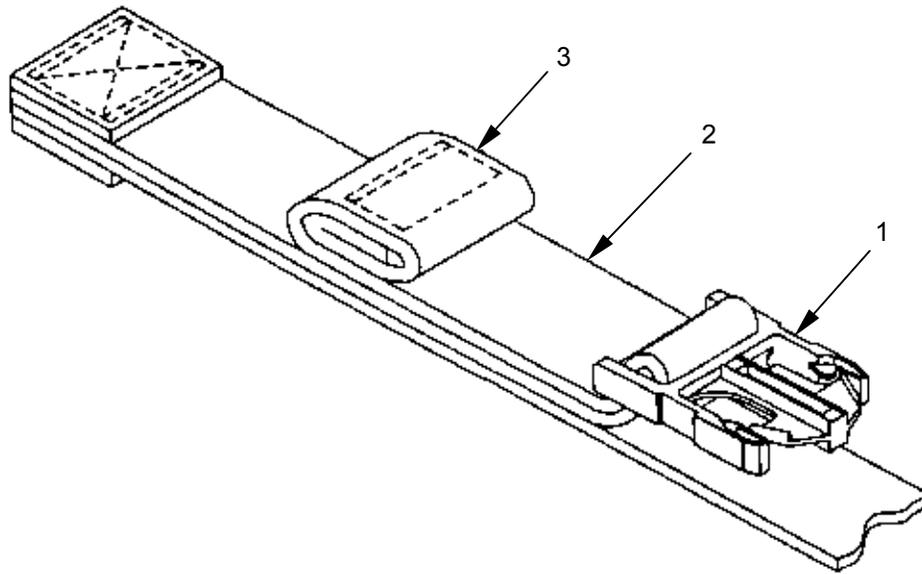

1. Replacement of damaged hardware:

- a. If only the snap hook (2) is damaged, carefully cut and remove the stitching at the folded end of the strap (3). Remove damaged snap hook and replace with serviceable item. Fold end of strap according to original construction and stitch using size 3 thread, 5 to 8 stitches per inch, and a HD sewing machine.
- b. If only the triangular link (4) is damaged, carefully cut and remove the stitching at the folded end of the strap (3), sides and link end (5) of the strap. Remove triangular link and replace with a serviceable item. Stitch link end (5) and sides. Fold end of strap as in the original construction and stitch using size 3 thread, 5 to 8 stitches per inch, and a HD sewing machine.

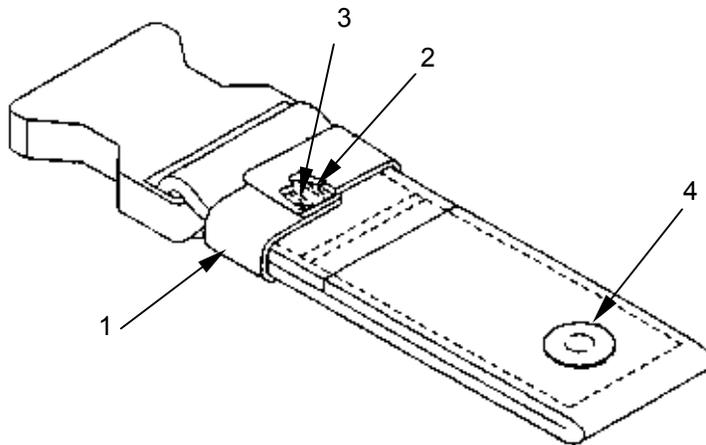

Replace a damaged cross adjustable leg strap by fabricating a new one as described in WP 0053 00.

1. Replacement of damaged quick release buckle:
 - a. If only the male half quick release buckle **(1)** is damaged, carefully cut and remove the stitching at the folded end of the strap **(2)**. Remove male half of buckle, replace with a serviceable item of like construction and design.
 - b. Thread through replacement buckle as in original construction and fold end **(3)** four times (five plies thick) 1-inch wide and stitch with double box stitch pattern using size 3 thread, 5 to 8 stitches per inch, and a HD sewing machine.

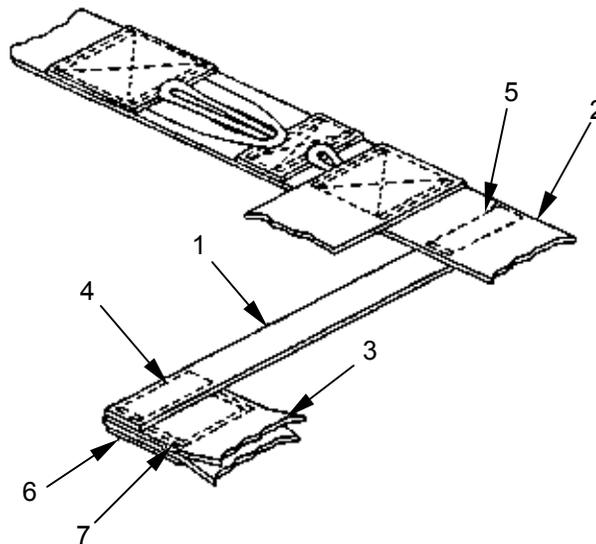

Replace a damaged Leg Strap Release Assembly with a new one.

1. Replacement of damaged elastic keeper (1).
 - a. Carefully cut and remove stitching (2) that secures the keeper to the strap.
 - b. Cut a 4 ³/₄-inch length of 1-inch wide elastic webbing and wax dip ends to a depth of ³/₈-inch.
 - c. Fold in half with ends aligned and stitch with two rows of stitching ¹/₂-inch from edge (3). Use size FF thread, 6 to 9 stitches per inch, and a MD sewing machine.
 - d. With keeper (1) turned to inside, position in original location and stitch to strap with two rows of stitching ¹/₄-inch from edge. Use size FF thread, 6 to 9 stitches per inch, and a MD sewing machine. Turn keeper to outside by passing end of leg strap release assembly through keeper loop.
2. Replace or reset a loose or damaged grommet (4) in accordance with procedures described in WP 0015 00.
 - a. Resetting. Reset a loose Size 0, Type III Spur Grommet and washer by using appropriate dies.
 - b. Replace. Remove damaged grommet and washer by cutting it with a pair of diagonal wire cutters. Do not damage the webbing.
 - c. Set. Without damage to the webbing, install a replacement grommet of appropriate size, and set using the proper size dies. The grommet half shall be located on the web loop side of the leg strap release assembly.

Release Handle Assembly. Replace a damaged cable lanyard or pile fastener tape on the release handle assembly as follows:

1. Replacement of release handle lanyard **(1)**.
 - a. Cut the tubular lanyard web adjacent to harness **(2)** and handle straps **(3)** and discard.
 - b. Cut a 9 ³/₄-inch length of ⁵/₈-inch width, natural color tubular webbing and sear ends.
 - c. Position replacement on top of webbing (side opposite the pile tape) to outside edge of webbing and secure to handle assembly using double box stitch pattern **(4)**. Use size 3 thread, 5 to 8 stitches per inch, and a HD sewing machine.
 - d. Superimpose other end of replacement on top of cut lanyard, to outside edge of webbing and secure to harness assembly with double box stitch pattern **(5)**. Use size 3 thread, 5 to 8 stitches per inch, and a HD sewing machine.
2. Replacement of pile fastener tape **(6)**.
 - a. Carefully cut and remove stitching **(7)** that secures the pile to the release handle and discard.
 - b. Cut a 1 ³/₄-inch length of 1 ¹/₂-inch width pile tape.
 - c. Position as in original location and stitch with two rows of stitching ¹/₈-inch from the edges. Use size FF thread, 6 to 9 stitches per inch, and a MD sewing machine.

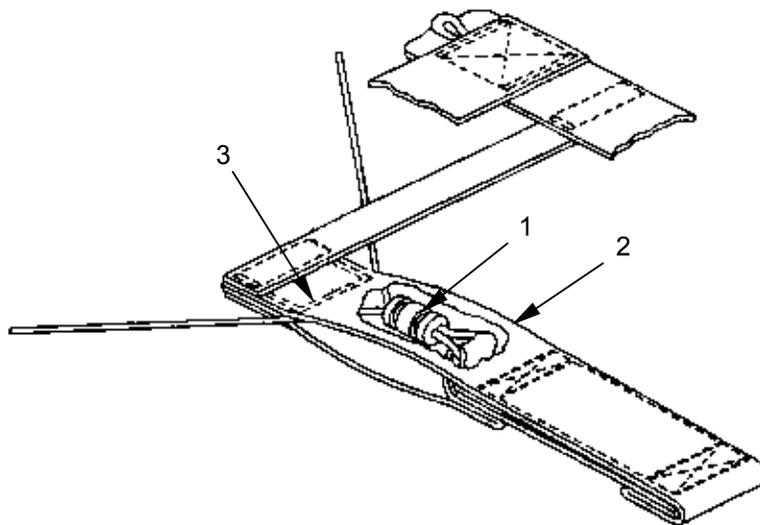

3. Replace or reset a loose or damaged wire cable on the release handle assembly as follows:
 - a. Re-press a loose cable sleeve (1) with compressing tool.
 - b. Replacement of damaged wire cable.
 - (1) Remove a damaged wire cable by cutting cable at web loop attachment (2) location with cable cutter.
 - (2) Cut a 17-inch length of replacement cable and sear ends of the nylon cable cover coating, sealing the ends of the wire material.

CAUTION

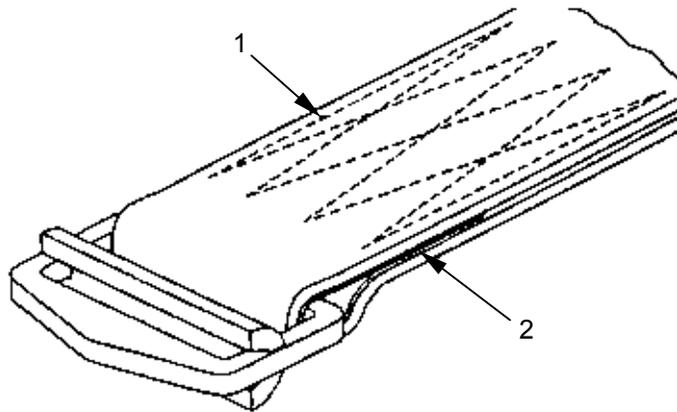

Be careful not to cut the wire cable material by compressing the sleeve excessively tight when assembling sleeve to the cable.

- (3) Thread one end of cable through the $\frac{3}{4}$ -inch long wire cable sleeve (1), web loop of handle assembly (2), and opposite side of sleeve until ends are even, forming a 1-inch loop from cable edge to sleeve edge. Compress the sleeve $\frac{3}{16}$ -inch from each end of the sleeve (two places) firmly to retain cable. The cable legs shall be positioned between the web plies and to the outside edges of pile tape stitching (3).

Replace damaged retainer strap quick-fit adapters as follows:

1. Carefully cut and remove the 4-point WW stitch pattern **(1)** which secures the adapter to the harness and discard buffer **(2)**.
2. Cut a 3 1/2-inch length of Type VIII nylon webbing, sear ends and fold so ends are offset 1/4-inch.
3. Position buffer **(2)** and harness web strap on serviceable adapter as in original and stitch with 3-inch long 4-point WW stitch pattern. Use size 3 thread, 5 to 8 stitches per inch, and a HD sewing machine.

Equipment Condition

The AT4 Pack should be clean and dry. Place assembly on worktable.

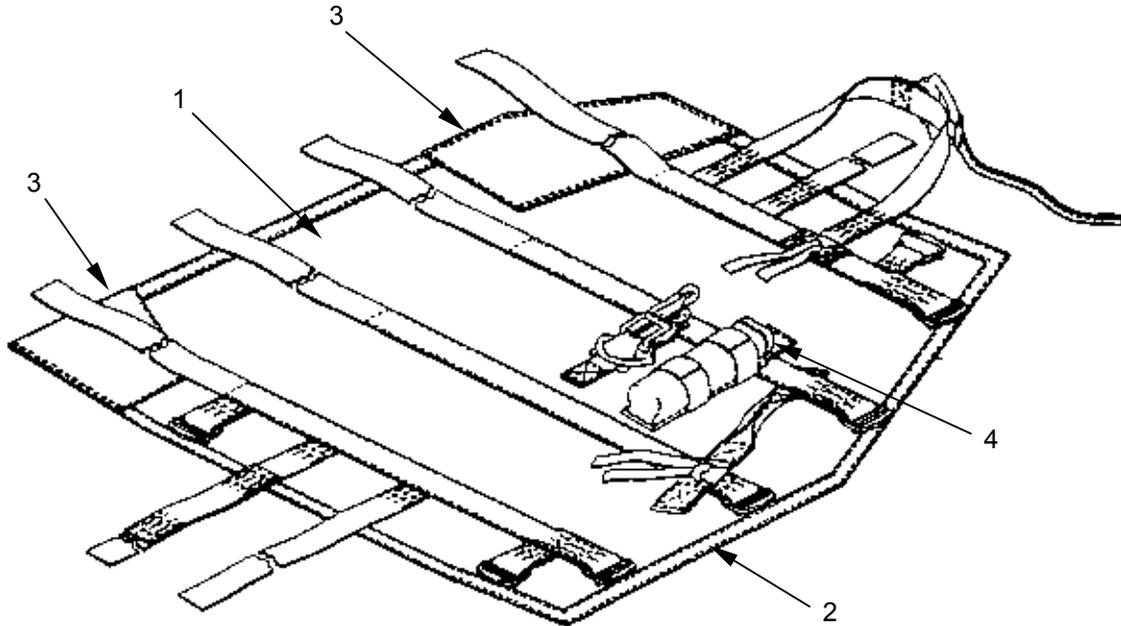

INSPECT

Perform a before and after technical/rigger type inspection of the AT4 Pack as outlined in WP 0008 00.

REPAIR

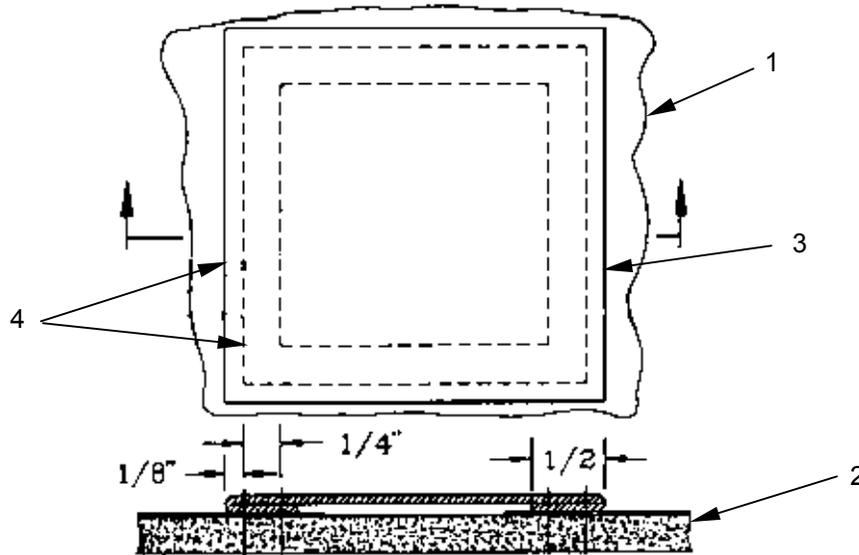

The nylon fabric (1) of the pack body may be restitched, darned and patched. The felt lining may be restitched and plugged.

1. Restitching. Restitch loose or broken stitching on body of pack (2), muzzle butt (3), and lowering line pocket (4) directly over old stitching using size 3 thread, 5 to 8 stitches per inch, and a HD sewing machine. Lock stitching at least $\frac{1}{2}$ -inch.

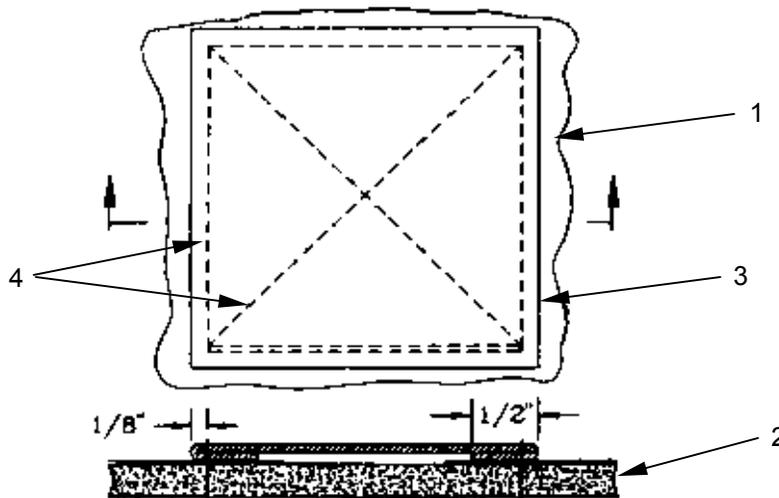

2. Darning. Darn a hole or tear in the pack fabric, rifle butt or muzzle pockets that does not exceed 1-inch in length or diameter using size E thread and a darning machine. There is no limit to darns that may be applied, provided they do not weaken or reduce the original strength of the fabric more than 10%. If damage is in the lined portion of the container body and only the cotton duck is damaged, darn through duck and felt. If felt is also damaged, remove damaged area before darning duck fabric. Then plug felt as in 3(c) below.
3. Patching. There is no limit to the number of times the container body may be patched. Patch a hole or tear that exceeds 1-inch in length or diameter following procedures in (a) or (b) below. Use nylon or cotton duck cloth according to original construction for patching outside, and $\frac{1}{4}$ -inch thick felt for plugging inside lining. Use a HD sewing machine, size 3 thread, and 5 to 8 stitches per inch.

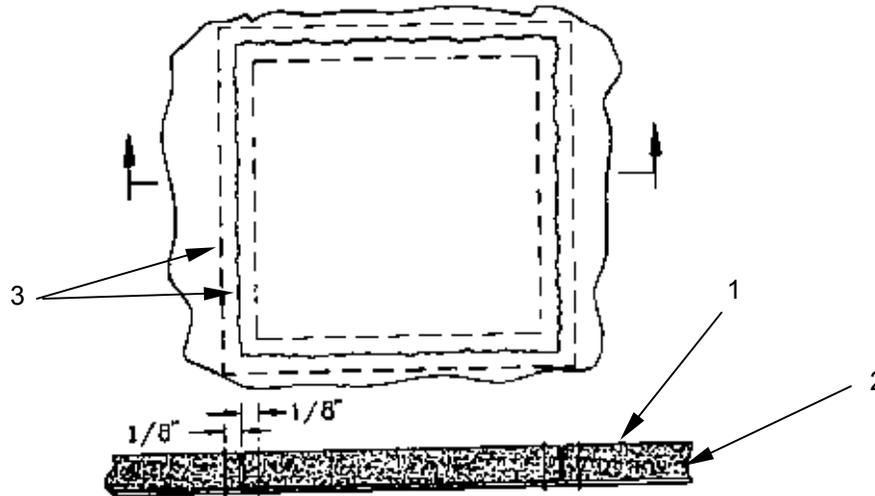

- a. To patch a lined portion of the pack (1) when the felt (2) is not damaged, cut nylon or cotton duck patch (3) 2-inches beyond circumference of damaged portion. Turn under edges of patch $\frac{1}{2}$ -inch and center patch over damaged area. Sew patch to pack (1) with a double row of stitching (4) as shown.

- b. To patch a lined portion of the pack (1) when the felt (2) is damaged, remove the damaged felt as described in (3) below. Cut a piece of felt (2) the same size as the piece removed, and position felt plug and cotton duck patch (3) (with edges turned under $\frac{1}{2}$ -inch) over damaged area. Sew a single box X stitch (4) formation as shown.

- c. To plug the felt (1) lining, mark a rectangle around the damaged area. Remove the damaged felt while being careful not to damage the cotton duck material (2). If damage is in area of the rifle butt or muzzle pockets, carefully remove stitching that holds pocket to pack. Cut a piece of felt the size of the piece removed. Position felt plug into area cleared and sew as shown. Use size 3 thread, 5 to 8 stitches (3) per inch and a HD sewing machine.

- d. Repair of binding tape. Overlap the binding tape extending the new tape at least 1-inch beyond the damaged tape. Stitch tape with two rows of stitching 1/8 and 1/4-inches from edge of tape as in original construction using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine.
- e. Repairing Webbing.

CAUTION

If the webbing is inadvertently damaged when stitching is being removed, the webbing must be replaced in accordance with original construction.

- (1) General. The webbing on the pack may be restitched.
 - (2) Restitching. Restitch loose, broken or defective stitching according to original construction using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine. Lock stitching at least 1/2-inch.
- f. Repair lowering line pocket (3) by restitching. Use size FF thread, 6 to 9 stitches per inch, and a MD sewing machine. Lock stitching at least 1/2 inch.

CAUTION

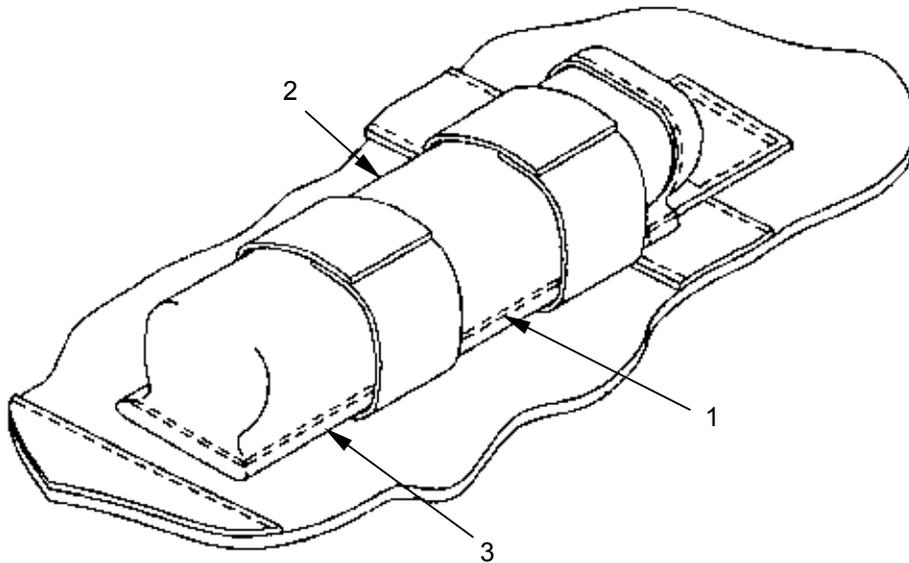

Splicing of the lowering line is not authorized. Serious equipment damage may occur due to failure of a spliced lowering line.

- g. Repair lowering line (2) by restitching. Use size 3 thread, 5 to 8 stitches per inch and a MD sewing machine. Lock stitching at least 1/2-inch. To replace quick ejector snap, carefully cut and remove stitching that holds hardware to lowering line. Place new ejector snap between buffer and lowering line and stitch using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine.

REPLACE

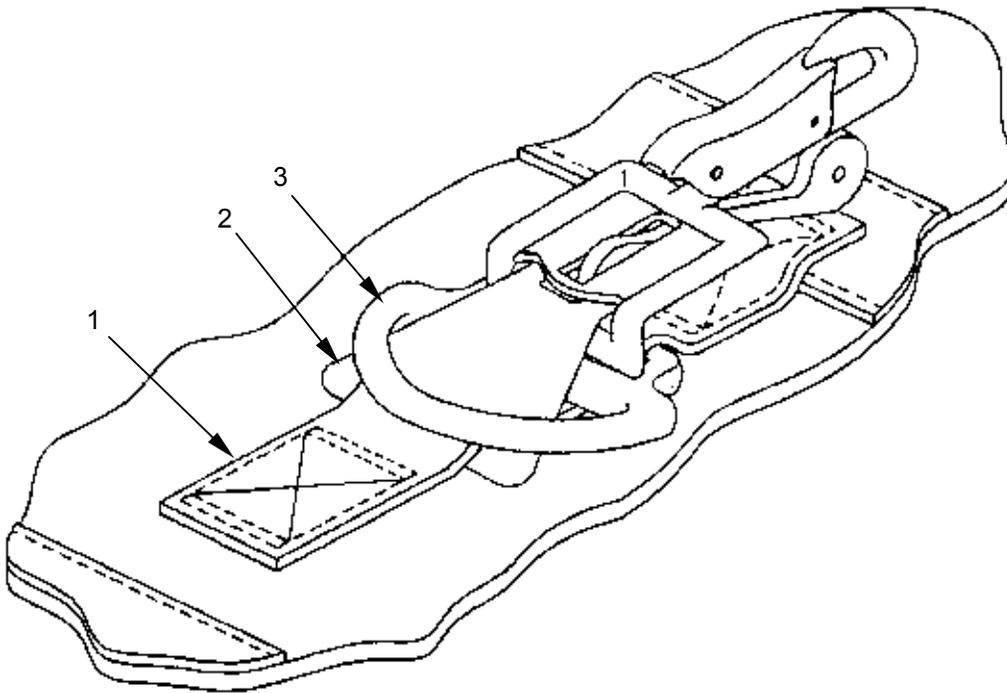

Lowering Line Pocket. Replace a damaged lowering line pocket, and hook and pile retainer as follows:

1. Cut stitching (1) and remove damaged pocket (2) from pack.
2. Fabricate a new lowering line pocket as described in WP 0053 00.
3. Position replacement pocket assembly as in original and stitch to pack $\frac{1}{8}$ -inch from pocket edge (3) using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine.

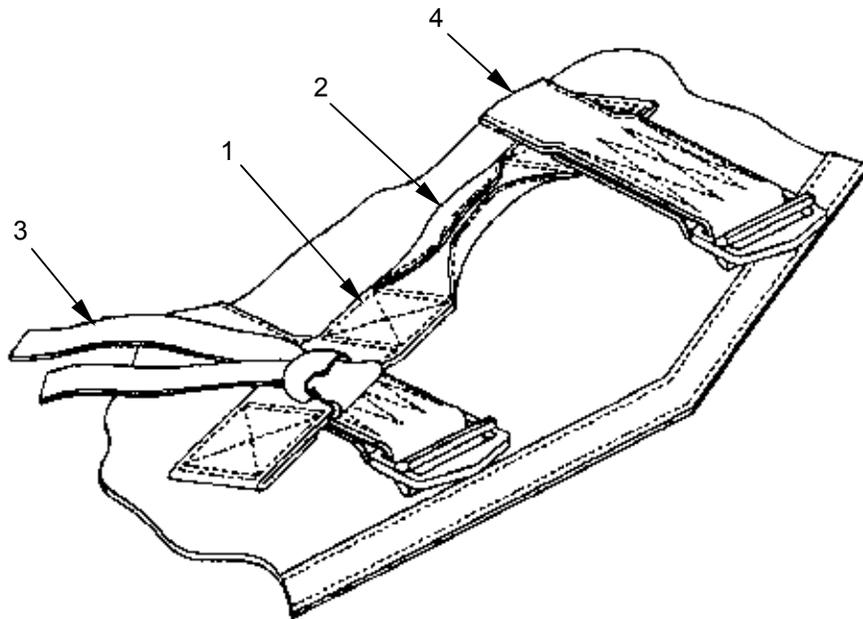

Replacing Webbing. All webbing items may be replaced. Replacement will be accomplished in accordance with the original construction and as prescribed herein.

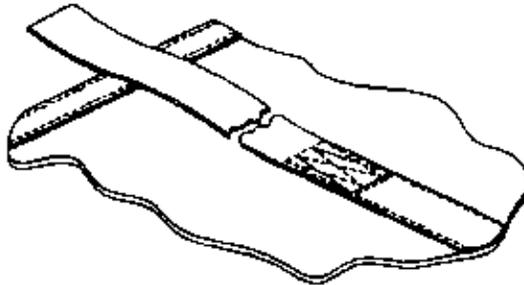

1. Line/D-Ring Chape. Replace damaged chape as follows:
 - a. Carefully cut and remove the three stitch patterns that secure the chape **(1)** to the pack and discard.
 - b. Make new chape as specified in WP 0053 00.
 - c. Position replacement chape as in original and secure to pack body with 2-inch double box X stitch pattern in center of chape using size 3 thread 5 to 8 stitches per inch and a HD sewing machine.
 - d. Position serviceable link **(2)** in location and direction as in original and secure to pack with 2-inch double box X stitch pattern using size 3 thread 5 to 8 stitches per inch and a HD sewing machine.
 - e. Position serviceable D-ring **(3)** in location as in original and secure to pack with 2-inch double box X stitch pattern using size 3 thread 5 to 8 stitches per inch and a HD sewing machine.

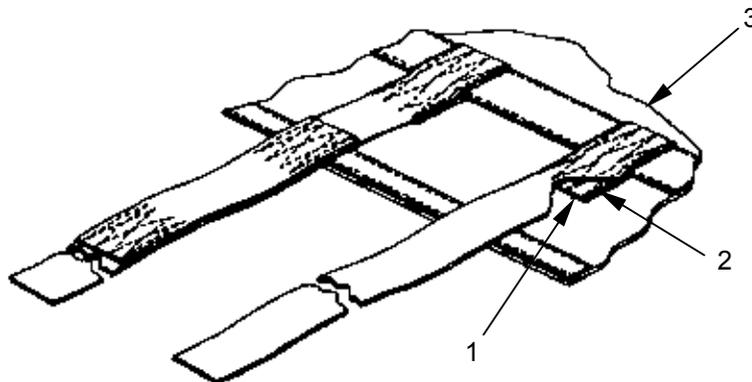

2. Carrying Handle Strap. Replace damaged carrying handle strap as follows:
 - a. Remove damaged handle by cutting and removing stitching (1) of the two 2-inch box X patterns which secure the handle (2) to the pack at the leg tiedown tape end (3). Cut the webbing along the side-securing strap (4) at the other end and discard.
 - b. Make new handle as specified in WP 0053 00.
 - c. Turn under ends 1 1/4-inch and position replacement strap on top of side securing strap over cut end of old carrying handle, and over other end as in original construction using size 3 thread 5 to 8 stitches per inch and a HD sewing machine.

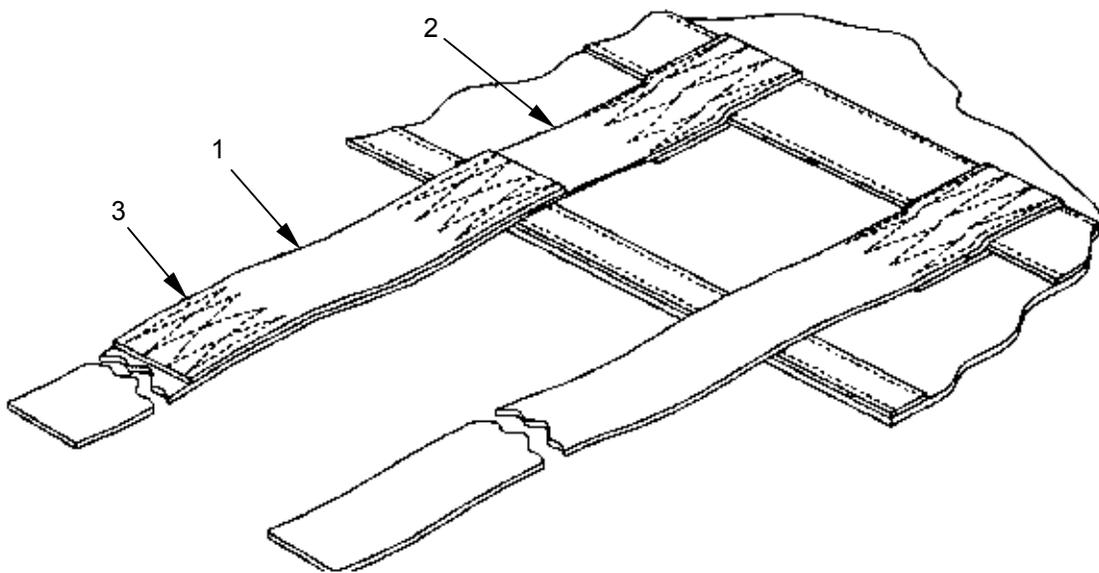

3. Side securing strap-running ends. Replace damaged running end of side securing strap as follows:
 - a. Remove damaged end by cutting strap along stitching that secures it to the pack.
 - b. Cut a length of Type VIII nylon webbing equal to length removed plus 3 1/2-inches and sear ends.
 - c. Turn under one end 1/2-inch, and position replacement strap 3 inches beyond the cut webbing end on the pack. Stitch with 3-inch four point WW pattern using size 3 thread 5 to 8 stitches per inch and a HD sewing machine.

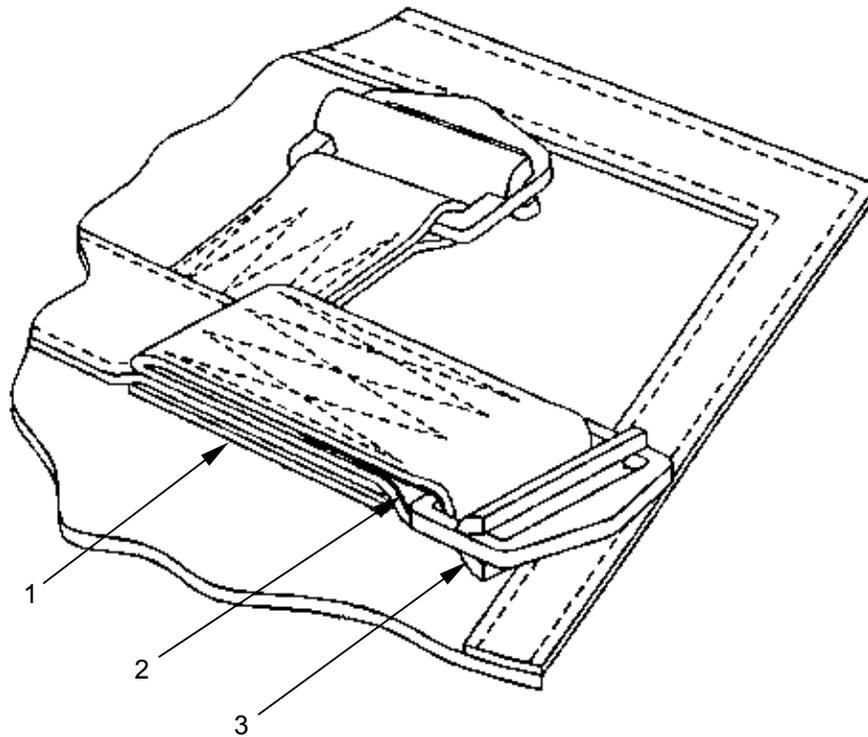

4. Aft end securing straps. Replace damaged aft securing straps as follows:
 - a. Remove damaged end by cutting strap (1) along stitching (2) that secures strap to pack (3).
 - b. Cut a length of Type VII nylon webbing to length removed plus 3-inches and sear ends of webbing.
 - c. Position replacement strap 3-inches beyond the cut webbing end on the pack (3). Stitch with 3-inch four point WW using size 3 thread 5 to 8 stitches per inch and a HD sewing machine.

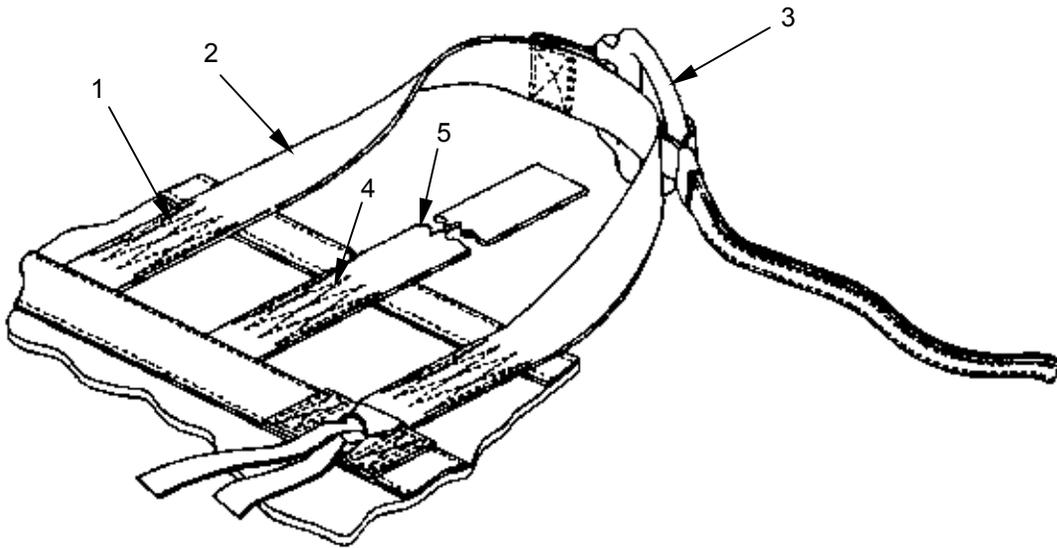

5. Replacement of damaged keeper strap:
 - a. Carefully cut and remove stitching which secures the keeper (1) to the aft end securing strap (2) and discard.
 - b. Cut a 13-inch length of Type VII nylon webbing and sear ends.
 - c. Make a mark 3-inches from each end for the 3-inch stitch patterns (3).
 - d. Position replacement keeper as in original and secure to strap with 3-inch four point WW patterns using size 3 thread 5 to 8 stitches per inch and a HD sewing machine.

6. Quick-Fit Adapter Chape, Side and Aft Securing Adapters. Replace damaged webbing or adapter as follows:
 - a. Remove adapter by cutting webbing as close to stitching as possible **(1)** and discard.
 - b. Cut a 3 ³/₄-inch buffer of Type VIII nylon webbing and fold so ends are offset ¹/₂-inch **(2)**.
 - c. Cut a 7 ¹/₂-inch adapter chape of Type VIII nylon webbing and sear ends. Fold webbing ¹/₂ and 3 ³/₄-inches from one end.
 - d. Place buffer and chape on serviceable adapter **(3)** and position replacement on top of original. Sew with a 3-inch 4-point WW stitch formation using size 3 thread 5 to 8 stitches per inch and a HD sewing machine.

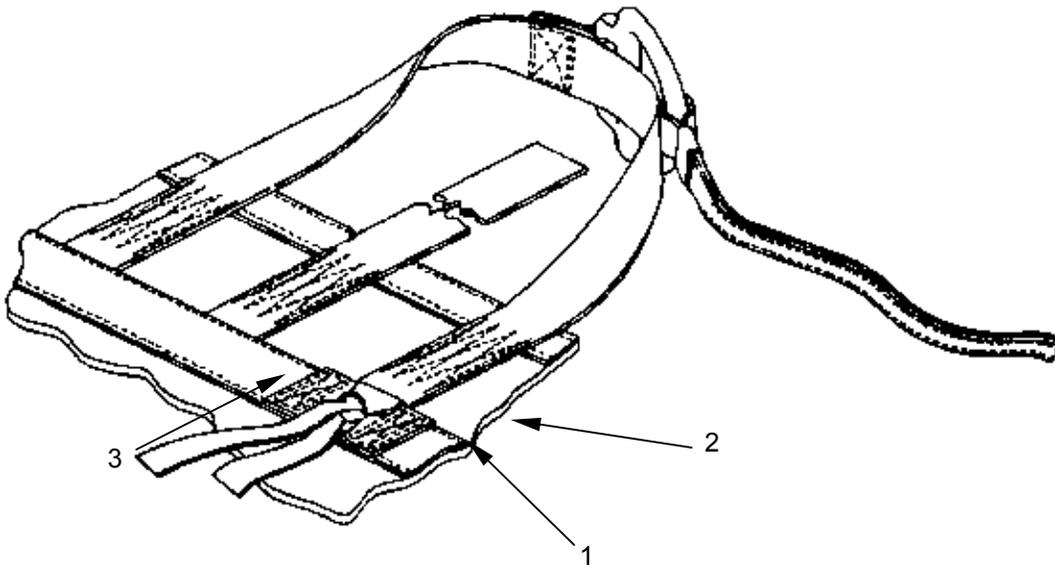

7. Forward end cross strap. Replace damaged cross strap as follows:
 - a. Carefully cut and remove stitching (1) of the two 4-point patterns which secures the strap (2) to the pack body and discard.
 - b. Make new forward end cross strap in accordance with WP 0053 00.
 - c. Position replacement cross strap with "D" ring (3) as in original and secure to pack using two 3 1/2-inch 4-point WW stitch pattern (1) using size 3 thread 5 to 8 stitches per inch and a HD sewing machine.
8. Forward end securing strap. Replace damaged forward securing strap as follows:
 - a. Carefully cut and remove stitching (4) which secures the strap (5) to the pack body and discard.
 - b. Cut a 20-inch length of Type VII nylon webbing and sear ends and make a mark 3 1/2-inches at one end (4) for the stitch pattern.
 - c. Position replacement securing strap as in original and secure to pack using 3 1/2-inch 4-point WW stitch pattern as shown, using size 3 thread 5 to 8 stitches per inch and a HD sewing machine.

9. Leg Tiedown Tape. Replace a damaged or missing tiedown tape as follows:
 - a. Remove the tiedown by untying the slip loop (girth hitch) knot and discard.
 - b. Cut an 82-inch length of 1-inch wide, Type II, cotton tape and wax dip cut ends a minimum of $\frac{1}{2}$ -inch.
 - c. Fold tape so one end is twice as long as the other. Pass loop through leg tiedown loop, forming a slip loop (girth hitch) knot around webbing.

10. Upper tiedown chape. Replace damaged web chape as follows:
 - a. Carefully cut and remove stitching (1) which secures the chape (2) to the side securing strap (3), pack body and discard.
 - b. Cut a 5 $\frac{1}{4}$ -inch length of Type VIII nylon webbing, sear ends, and fold the ends $\frac{7}{8}$ -inch (3).
 - c. Position replacement chape as in original and secure to side securing strap (2) and pack body with $\frac{5}{8}$ -inch double box X stitch pattern using size 3 thread 5 to 8 stitches per inch and a HD sewing machine.

Replacing hardware.

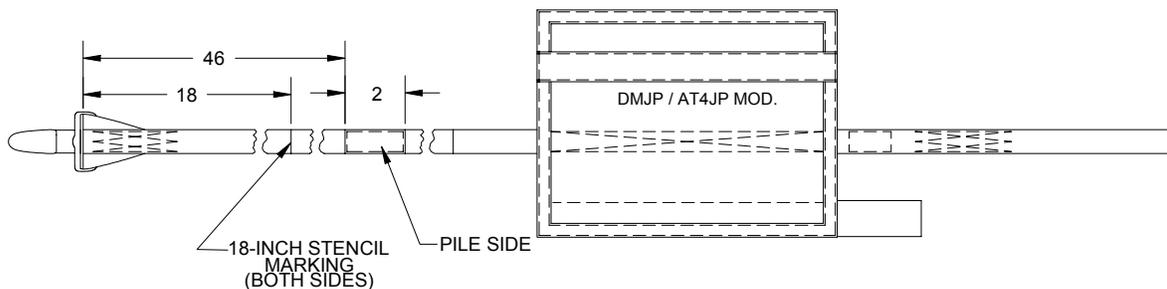

1. The quick-ejector snap on the lowering line may be replaced when damaged, by carefully cutting the stitching that secures hardware to lowering line. Place buffer and lowering line on serviceable quick-ejector snap and stitch with 3-inch, 3-point WW stitch formation using size 3 thread 5 to 8 stitches per inch and a HD sewing machine.
2. Replace other damaged hardware by carefully cutting and removing the two end stitch patterns that secures the hardware to the pack. Replace with serviceable link or D-ring by positioning as in original and sewing with 2-inch double box X stitch pattern using size 3 thread 5 to 8 stitches per inch and a HD sewing machine.

Alteration of Line Assembly, Lowering, for Tandem Load.

WARNING

This alteration applies only to loads used with tandem loads. Each commander will be responsible for determining the support operation requirement for his/her command, alter only the quantity necessary to support operation requirements.

1. Carefully cut the stitching that secures the 2-inch long pile tape located approximately 11 3/4-inch from quick-ejector snap end and remove cut stitching.
2. Cut a 2-inch length of pile tape. (If previously removed pile tape is undamaged, it may be used in lieu of replacement tape.)
3. Place marks 46 and 48-inches from the folded web edge quick-ejector snap end on the side of the removed 2-inch pile tape of the 1-inch wide lowering line.
4. With pile side facing up, position 2-inch pile tape between the marking and stitch with a single box stitch using size E thread, 7 to 11 stitches per inch and a MD sewing machine.
5. Markings.
 - a. Stencil with 1/2 inch high characters, on the outside of retainer fabric using stencil brush and parachute marking blue ink the following "DMJP/AT4JP MOD."
 - b. Stencil 1/8-inch wide line across the web width on each side of lowering line, 187-inches from fold web edge quick-ejector snap end.

 Stud, Snap Fastener, Style 2 (WP 0042 00, Table 1, Item 7)

Equipment Condition

Case should be clean and dry. Place on worktable.

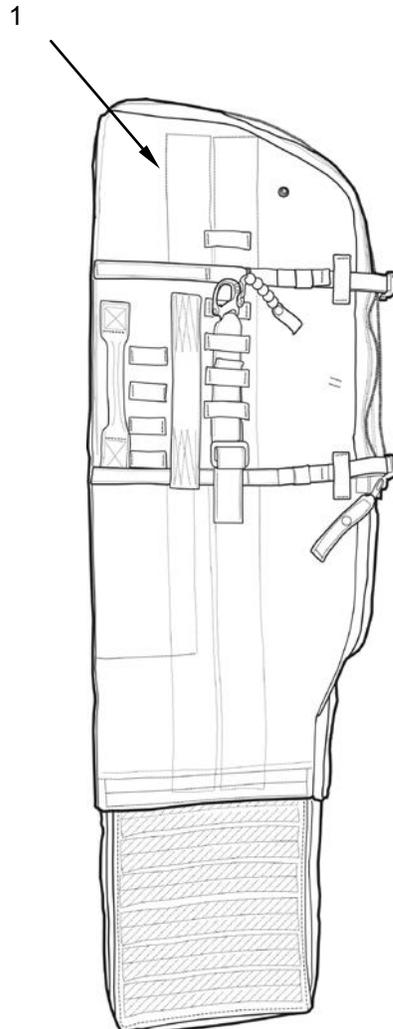

INSPECT

Perform a before and after technical/rigger type inspection of the Modular Airborne Weapons Case (MAWC) as outlined in WP 0008 00.

REPAIR

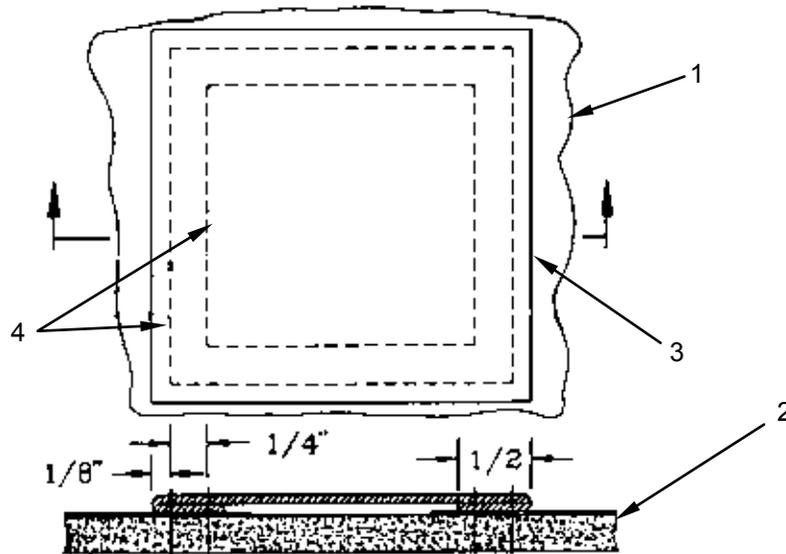

The Cordura material of the case may be restitched, darned, and patched.

1. Restitching. Restitch the case fabric **(1)** directly over old stitching using size 5 thread, 5 to 8 stitches per inch, and a HD sewing machine. Lock stitching at least $\frac{1}{2}$ -inch.

2. Darning. Darn a hole or tear in the case fabric that does not exceed 1-inch in length or diameter using size E thread and a ZZ darning machine. There is no limit to darns that may be applied, provided they do not weaken or reduce the original strength of the fabric more than 10%.

3. Patching. There is no limit to the number of times the case may be patched. Patch a hole or tear that exceeds 1-inch in length or diameter following procedures in a) or b) below. Use Cordura 1000 denier, according to original construction for patching outside.
- a. To patch an exterior location on the case [(1), (2)], cut patch material (3) 2-inches beyond circumference of damaged portion. Turn under edges of patch $\frac{1}{2}$ -inch and center patch (3) over damaged area. Sew patch to case with a double row of stitching (4) as shown.

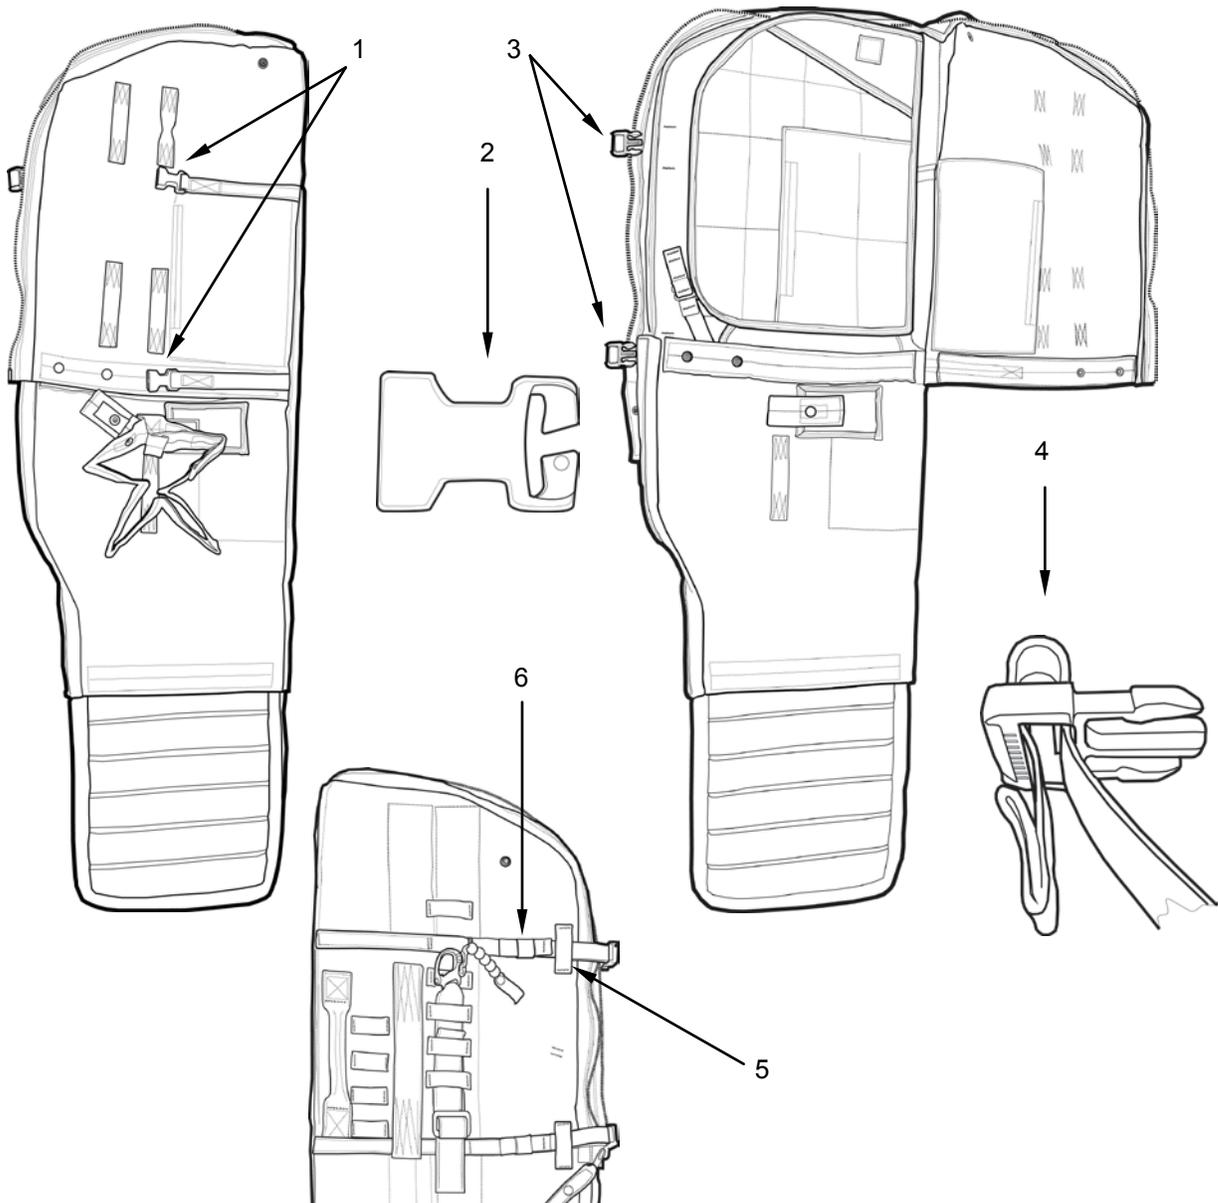

- b. Repairing Tape, Webbing and Inner Reinforcement Webbing. Restitching is the only repair authorized for the tape, and webbing on the weapons case. Restitch loose or broken stitching on the corner reinforcement, tiedown loops, quick-adjustable buckle loop and shock absorber loop using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine. Restitch the inner reinforcement webbing using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine. Backstitch at least $\frac{1}{2}$ -inch. Restitch the inner reinforcement webbing using size E thread, 7-11 stitches per inch and a Zig-Zag sewing machine or bartack with 42 stitches per inch.
- c. Repairing and Lubricating Slide Fastener. Restitch loose or broken stitching on slide fastener tape using size FF thread, 6 to 9 stitches per inch and a MD sewing machine. Apply a small amount of "zipper ease" lubricant to slide fastener when it becomes difficult to operate.

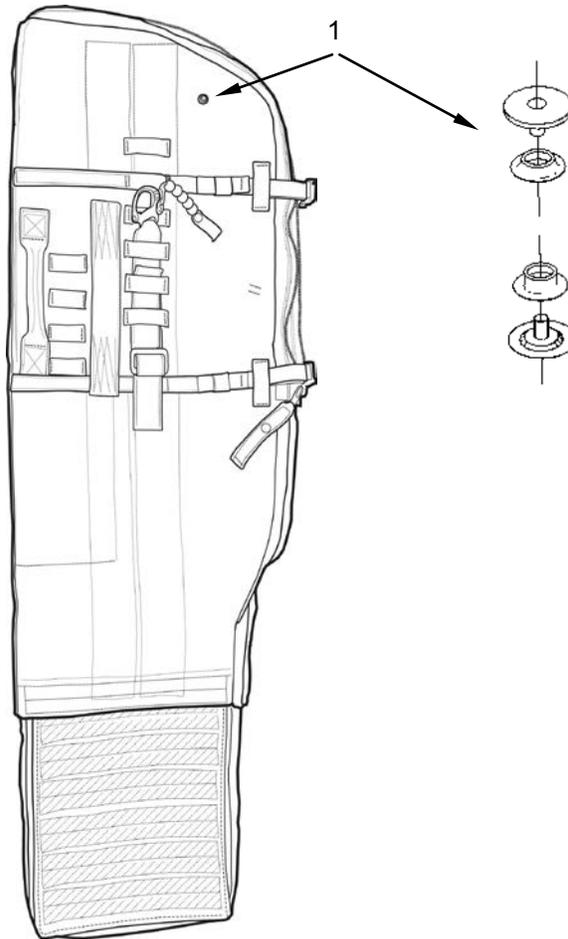

REPLACE

Buckles and snap fastener may be replaced.

1. Buckles. Replace damaged or missing plastic buckles with serviceable like items from stock. The split bar buckles (1) on the back of the case may be removed/installed by removing/inserting the webbing through the diagonal slot (2) in the base of the buckle. The side release latch buckles (3) may be removed/installed by removing/inserting the webbing through the standard slots in the base of the buckle (4). Loop the webbing up through the first slot and down through the second slot, so that the tail of the webbing falls to the back of the buckle. Tuck the excess webbing under the retaining strap (5) and webbing keeper (6), folding the webbing if needed.

2. Snap Fastener (1). Replace a damaged or missing snap fastener with a serviceable like item from stock; install in accordance with the procedures in WP 0015 00.

 Webbing, nylon, type III, 1-inch (WP 0052 00, Table 1, Item 58)
 Webbing, nylon, type VII (WP 0052 00, Table 1, Item 65)

Equipment Condition

Parachutist's Weapon's and Individual Equipment Pack and Harness Assembly should be clean and dry. Place assembly on worktable.

INSPECT

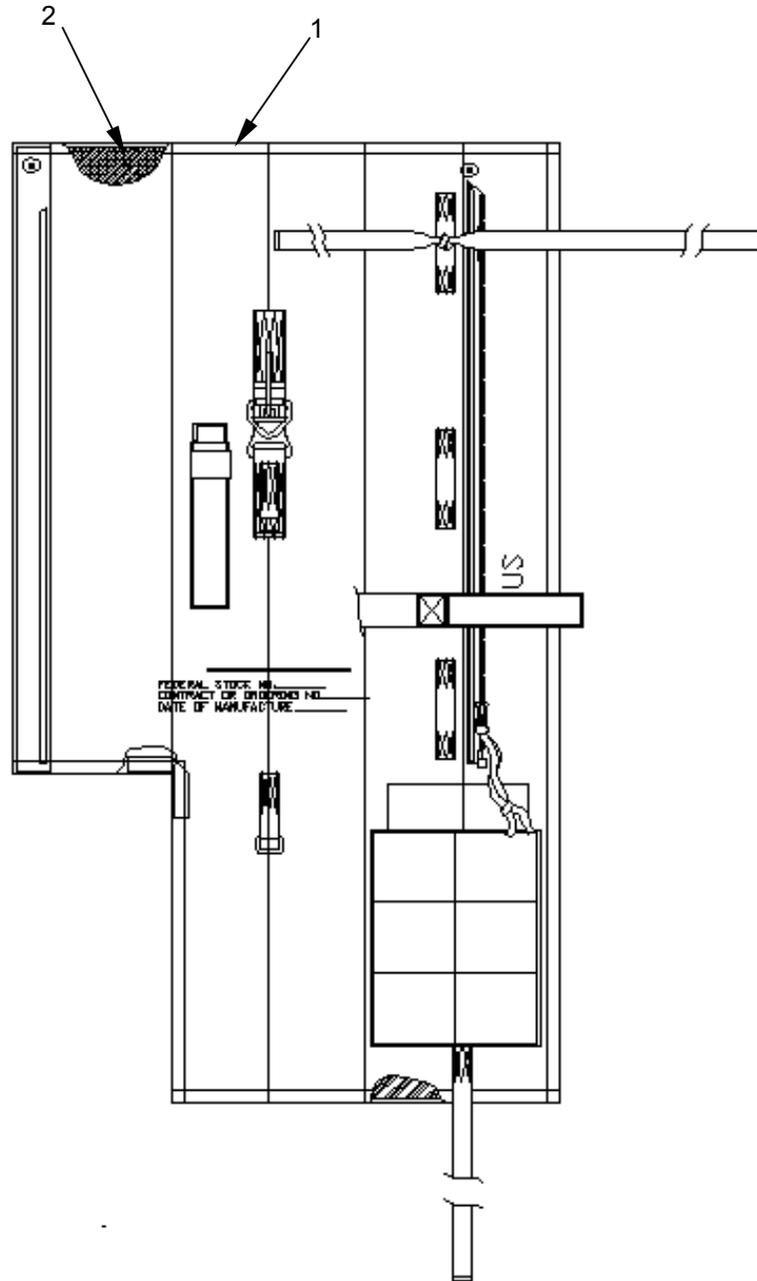

Perform a before and after technical/rigger type inspection of the nylon M-1950 weapons case as outlined in WP 0008 00.

NOTE

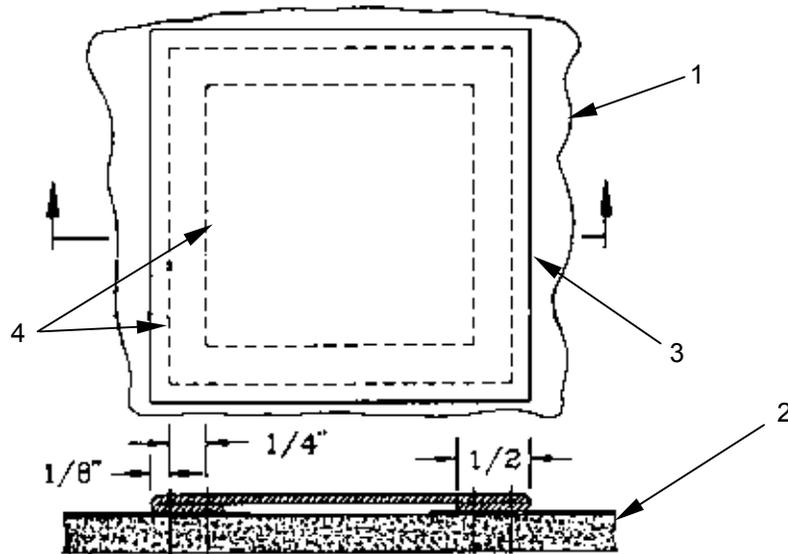

The nylon M-1950 replaces the cotton M-1950 in its entirety.

REPAIR

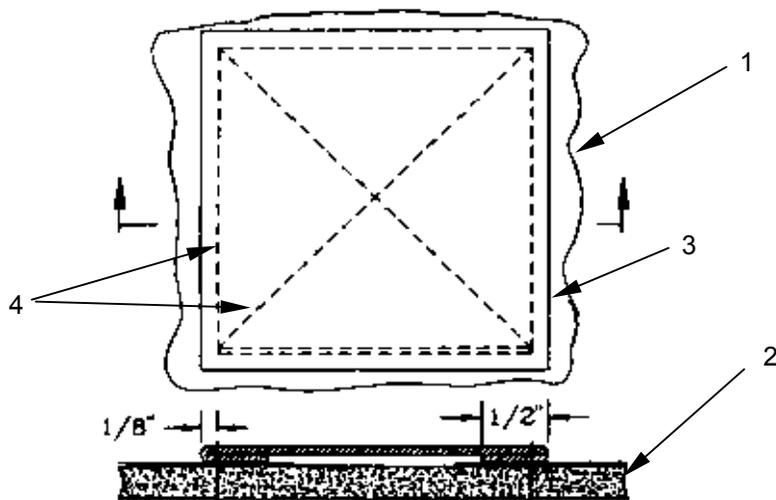

The nylon duck (1) and felt (2) fabric of the case may be restitched, darned, patched and plugged.

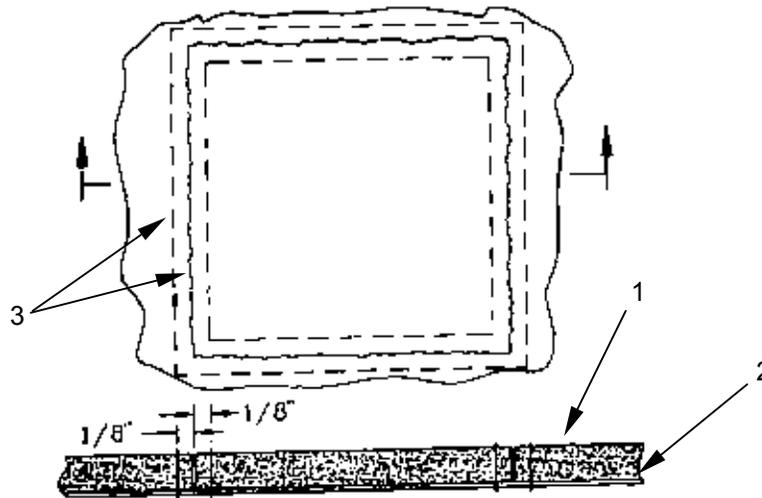

1. Restitching. Restitch the case fabric **(1)** directly over old stitching using size 5 thread, 5 to 8 stitches per inch, and a HD sewing machine. Lock stitching at least $\frac{1}{2}$ -inch.
2. Darning. Darn a hole or tear in the case fabric that does not exceed 1-inch in length or diameter using size E thread and a ZZ darning machine. There is no limit to darns that may be applied, provided they do not weaken or reduce the original strength of the fabric more than 10%. If damage is in the lined portion of the case and only the nylon duck is damaged, darn through duck and felt. If felt is also damaged, remove damaged area before darning duck fabric. Then plug felt as in 3. c) below.
3. Patching. There is no limit to the number of times the case may be patched. Patch a hole or tear that exceeds 1-inch in length or diameter following procedures in a) or b) below. Use nylon duck cloth according to original construction for patching outside, and $\frac{1}{4}$ -inch thick felt for plugging inside lining. Use a MD sewing machine, size FF thread, and 6 to 9 stitches per inch.
 - a. To patch a lined portion of the case **(1)** when the felt **(2)** is not damaged, cut a nylon or cotton duck patch **(3)** 2-inches beyond circumference of damaged portion. Turn under edges of patch $\frac{1}{2}$ -inch and center patch **(3)** over damaged area. Sew patch to case with a double row of stitching **(4)** as shown.

- b. To patch a lined portion of the case (1) when the felt (2) is damaged, remove the damaged felt as described in c) below. Cut a piece of felt the same size as the piece removed, and position felt plug and nylon duck patch (3) (with edges turned under 1/2-inch) over damaged area. Sew a single box X stitch (4) formation as shown.

- c. To plug the felt (1) lining, mark a rectangle around the damaged area. Remove the damaged felt while being careful not to damage the nylon duck material (2). Cut a piece of felt (1) the size of the piece removed. Position felt plug into area cleared and sew as shown. Use size 3 thread, 5 to 8 stitches (3) per inch and a HD sewing machine.

- d. Repairing Tape, Webbing and Inner Reinforcement Webbing. Restitching is the only repair authorized for the tape, webbing, and leather items on the weapons case. Restitch loose or broken stitching on the corner reinforcement, tiedown loops, quick-adjustable buckle loop and shock absorber loop using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine. Restitch flap thong, and slide fastener thong, using size FF thread, 6 to 9 stitches per inch and a MD sewing machine. Restitch the inner reinforcement webbing using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine. Backstitch at least $\frac{1}{2}$ -inch.
- e. Repairing and Lubricating Slide Fastener. Restitch loose or broken stitching on slide fastener tape using size FF thread, 6 to 9 stitches per inch and a MD sewing machine. Apply a small amount of "zipper ease" lubricant to slide fastener when it becomes difficult to operate.

REPLACE

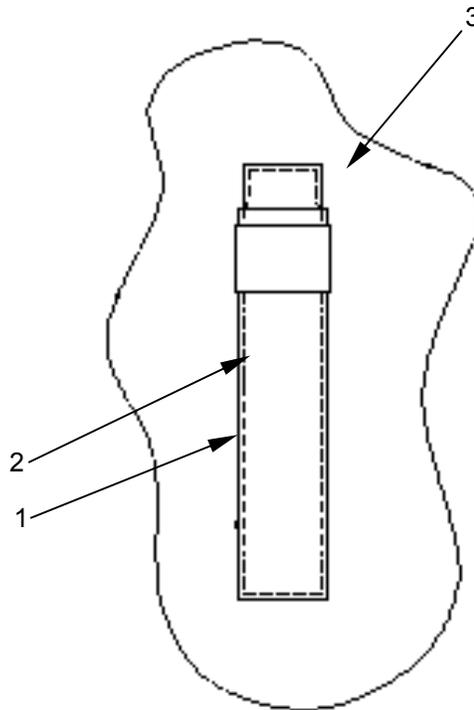

Replace the lowering line pocket (1) as follows:

1. Cut stitching (2) and remove damaged pocket.
2. Fabricate a new pocket as specified in WP 0053 00.

CAUTION

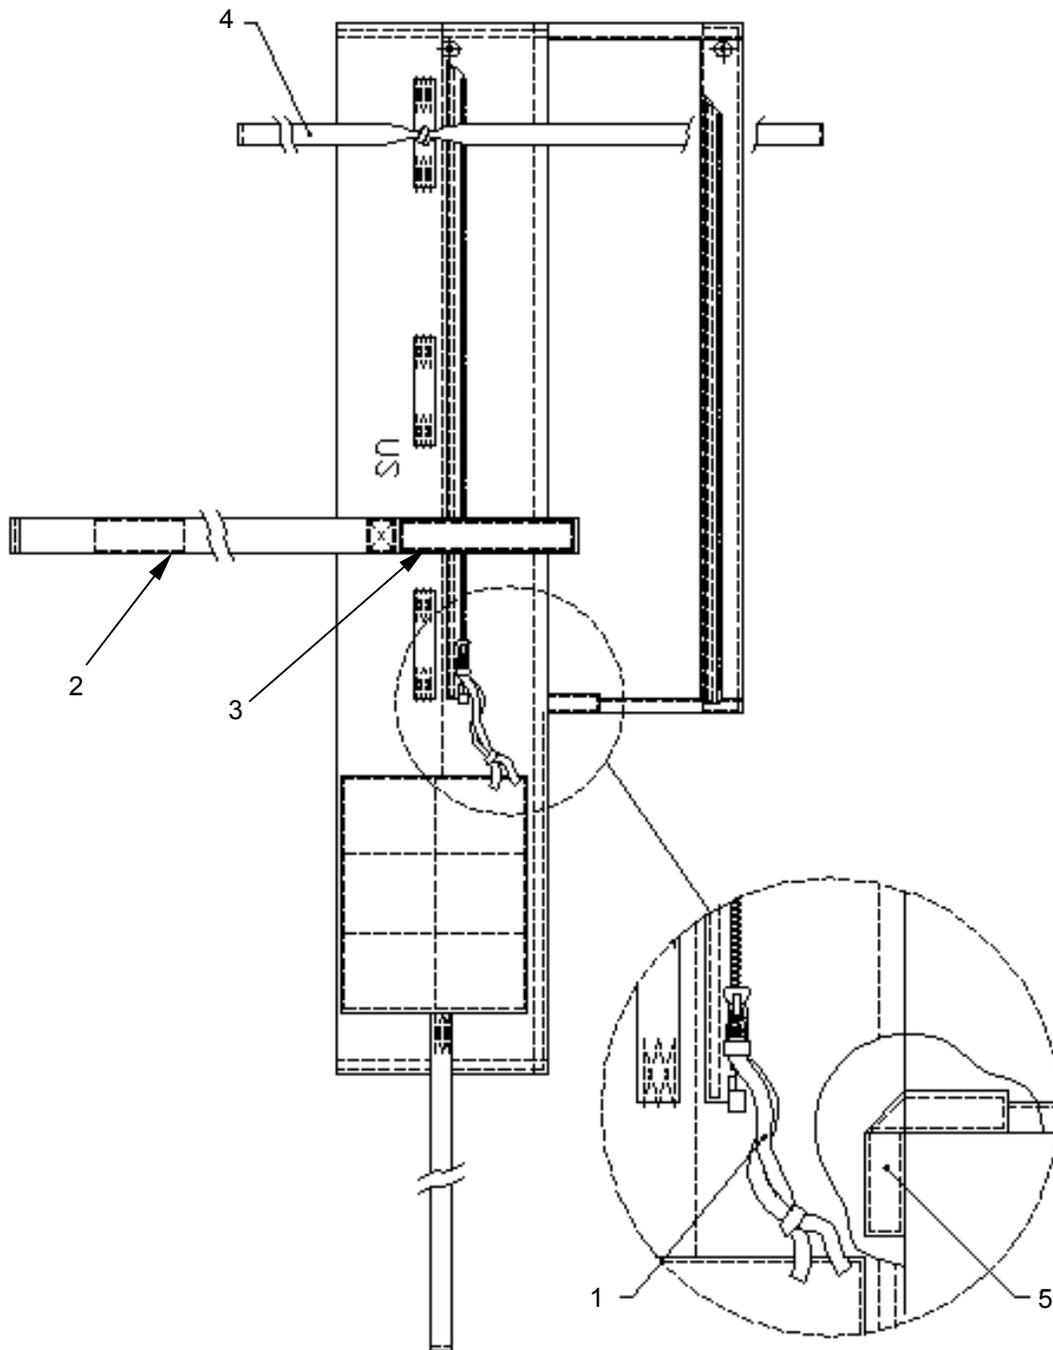

Avoid sewing through slide fastener when attaching new lowering line pocket. Damage to the slide fastener will result.

3. Position new pocket on weapons case (3), turn edges under $\frac{1}{2}$ -inch, and sew pocket to case using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine.

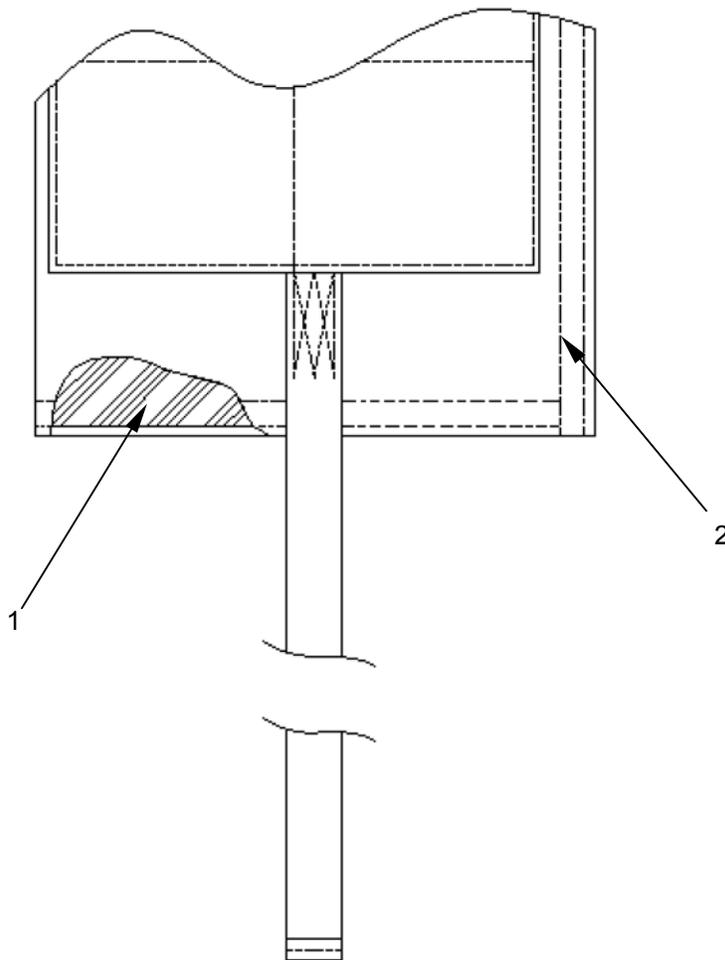

Replace the slide fastener thong, tiedown tapes, and corner reinforcement as follows:

1. Slide fastener thong. Replace a damaged or missing slide fastener thong **(1)** with a 14-inch length of $\frac{3}{8}$ -inch Type III nylon tape. Fold tape lengthwise, aligning edges and sew $\frac{1}{8}$ -inch from the edge, using size FF thread, 6 to 9 stitches per inch and a MD sewing machine. Tie ends of tape together with an overhand knot, and install tape on slide fastener.
2. Lower strap. Replace the lower strap **(2)** as follows:
 - a. Cut stitching **(3)** and remove damaged lower leg strap.
 - b. Fabricate a new lower leg strap as specified in WP 0053 00.
 - c. Position new lower leg strap in original location using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine.
3. Upper tiedown tape. Replace a damaged or missing upper tiedown tape **(4)** with a length of 1-inch Type I cotton tape. Use a 54-inch length on the top tiedown loop. Sear ends of tape as described in WP 0013 00. Pass one end of tape under tiedown loop, pull tape halfway halfway through, and tie tape to loop with a square knot.
4. Corner reinforcement. Replace a damaged corner reinforcement **(5)** with a $6\frac{3}{4}$ -inch length of 1-inch wide Type III nylon webbing as follows:
 - a. Cut sufficient stitching to expose damaged corner reinforcement.
 - b. Mark and fold webbing as shown.
 - c. Position replacement over damaged reinforcement. Sewing $\frac{1}{8}$ of an inch from the edge, stitch replacement to case as shown using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine.
 - d. Restitch loosened stitching. Backstitch at least $\frac{1}{2}$ -inch.

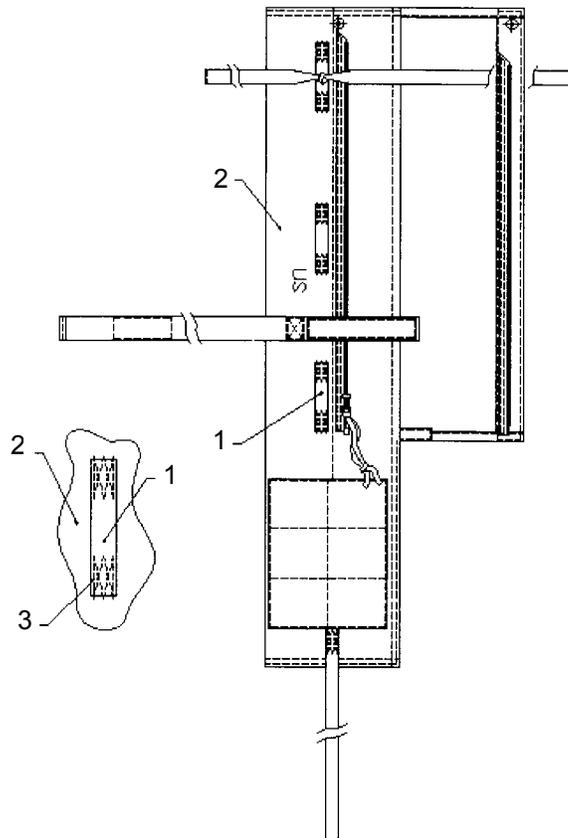

Replace the inner webbing reinforcements as follows:

1. Cut two, 38 $\frac{1}{4}$ -inch lengths of webbing and sew together as in WP 0053 00 **(1)**.
2. Cut stitching along side and bottom of weapons case, and remove damaged webbing reinforcement from case.
3. Position new webbing in original location and sew as in WP 0053 00.
4. Fold case, aligning sides as in original construction. Restitch side and bottom of case **(2)** using size 5 thread, 4 to 6 stitches per inch and a HD sewing machine.
5. Backstitch at least $\frac{1}{2}$ -inch.

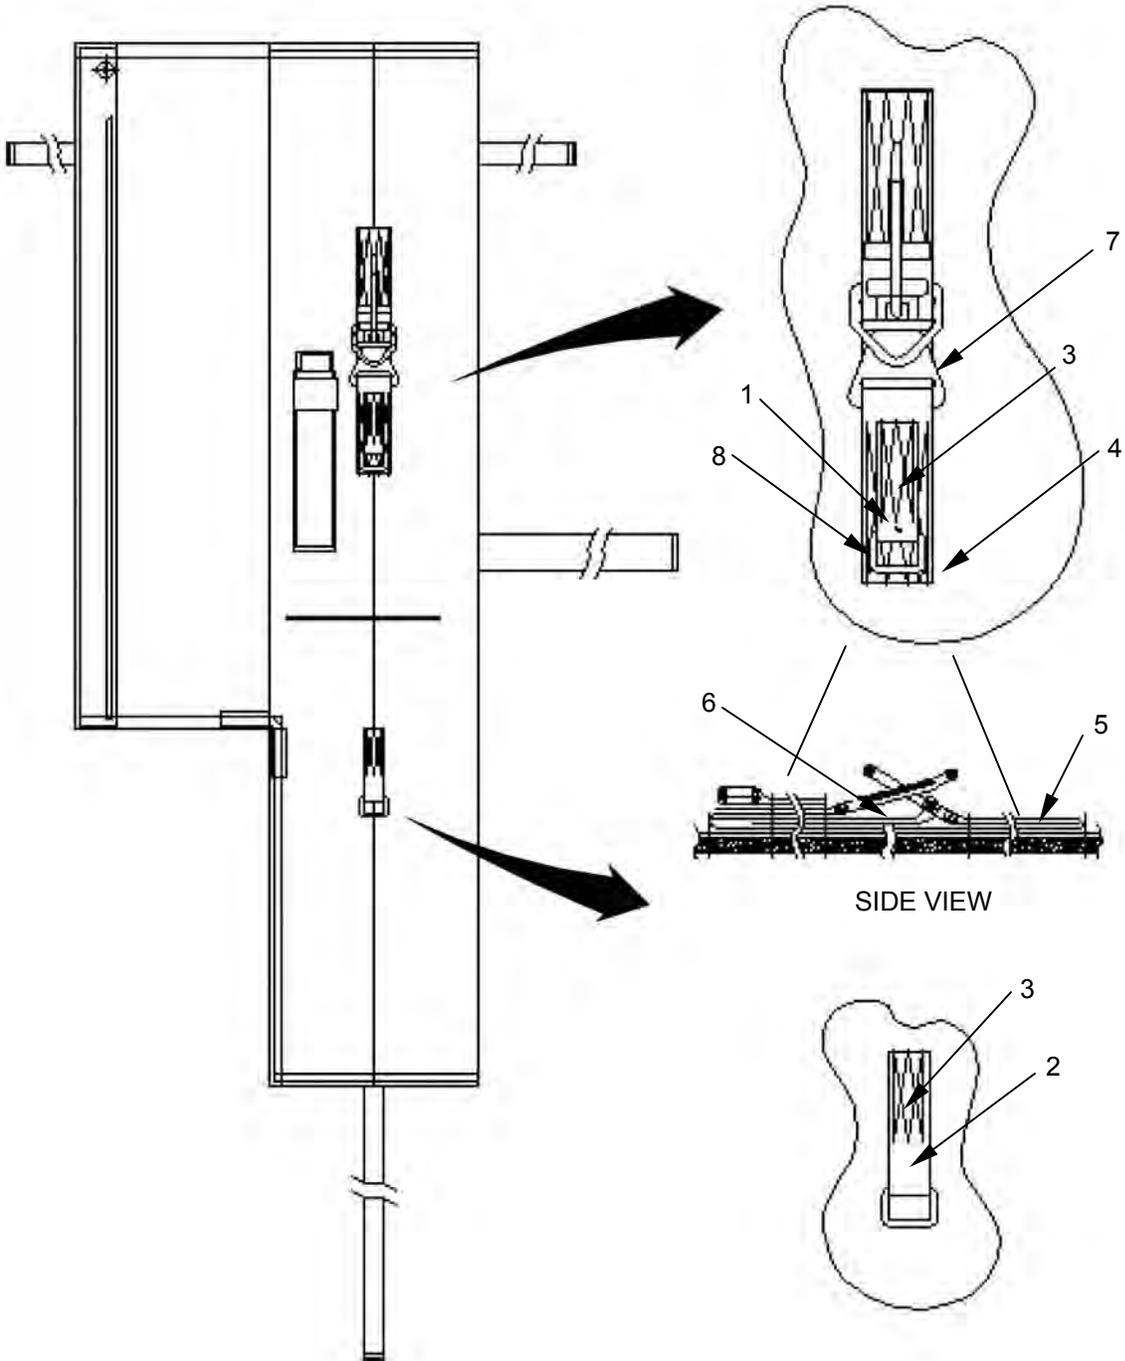

Replacing Webbing.

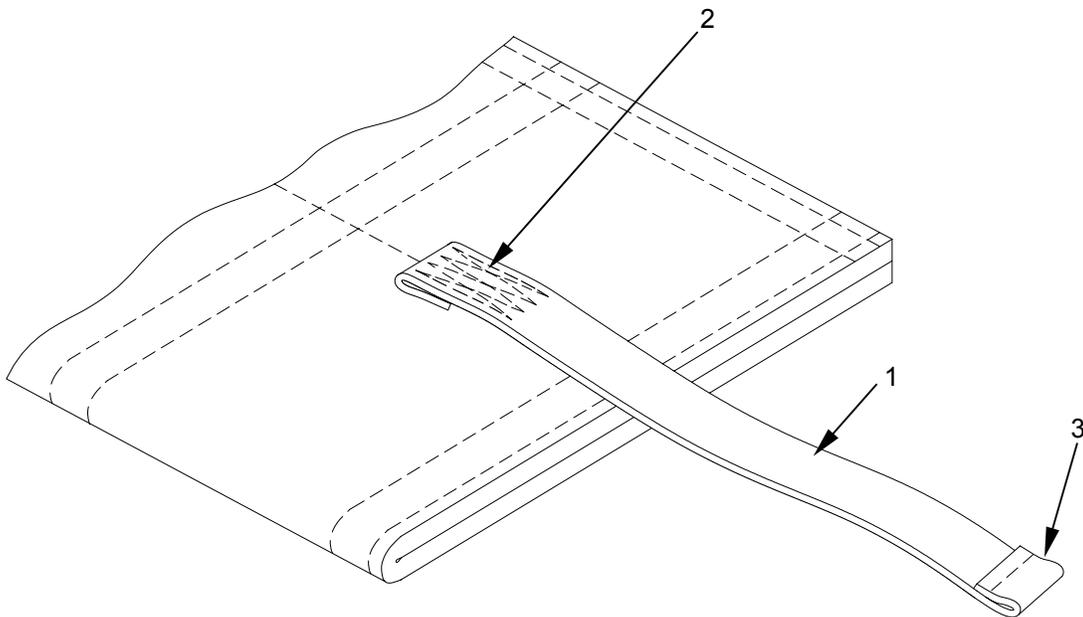

1. The webbing items listed in 2 through 5 below may be replaced. To replace damaged webbing, cut stitching along side and end of weapons case and along one side of the leather reinforcement. After installing new webbing, restitch leather reinforcement, side and end of case using size 5 thread, 4 to 6 stitches per inch and a HD sewing machine.
2. Tiedown loop.
 - a. Replace a damaged tiedown loop (1) with a 6-inch length of 1-inch Type III nylon webbing.
 - b. Cut stitching, and remove damaged loop.
 - c. Sear ends of type III nylon webbing and position replacement on weapons case (2).
 - d. Sew each end of replacement to weapons case with a 3-point WW stitch formation (3) using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine. Carry stitching over end of webbing one stitch minimum, 2 stitches maximum.

3. Loop chap.
 - a. Replace a damaged upper **(1)** or lower **(2)** loop chap with a 7-inch length of 1-inch Type III nylon webbing.
 - b. Cut stitching **(3)** and remove damaged chap and loops. When removing upper loop chap be careful not to cut stitching that secures snap link loop chap **(4)** to case.
 - c. Install loops on replacement webbing, and sew webbing to case with a 3-point WW stitch formation using size 5 thread, 4 to 6 stitches per inch and a HD sewing machine.
4. Triangular loop chaps. Replace a double-loop **(5)** or single-loop chap **(6)** as follows:
 - a. Double-loop chap.
 - (1) Cut stitching, and remove upper loop chap **(1)** and double-loop chap **(5)** from weapons case. Remove quick-release snap link **(7)** and snap link loop **(4)**.
 - (2) Cut a 32-inch length of Type VII nylon webbing, and pass webbing through quick-release snap link **(7)** and snap link loop as shown.
 - (3) Position replacement double chap loop on case along with the original single loop chap **(6)**, and sew a 4-point WW stitch formation using size 5 thread, 4 to 6 stitches per inch and a HD sewing machine.
 - (4) Stitch upper loop chap **(1)** in place as in 3 c), above.
 - b. Single-loop chap.
 - (1) Cut stitching and remove upper loop chap, cut stitching on lower double chap and remove damaged single loop chap **(6)** from weapons case.
 - (2) Cut a 13 1/2-inch length of Type VIII nylon webbing. Thread webbing through U-ring loop, position webbing on case, and sew a 4-point WW stitch formation **(8)** using size 5 thread, 4 to 6 stitches per inch and a HD sewing machine.

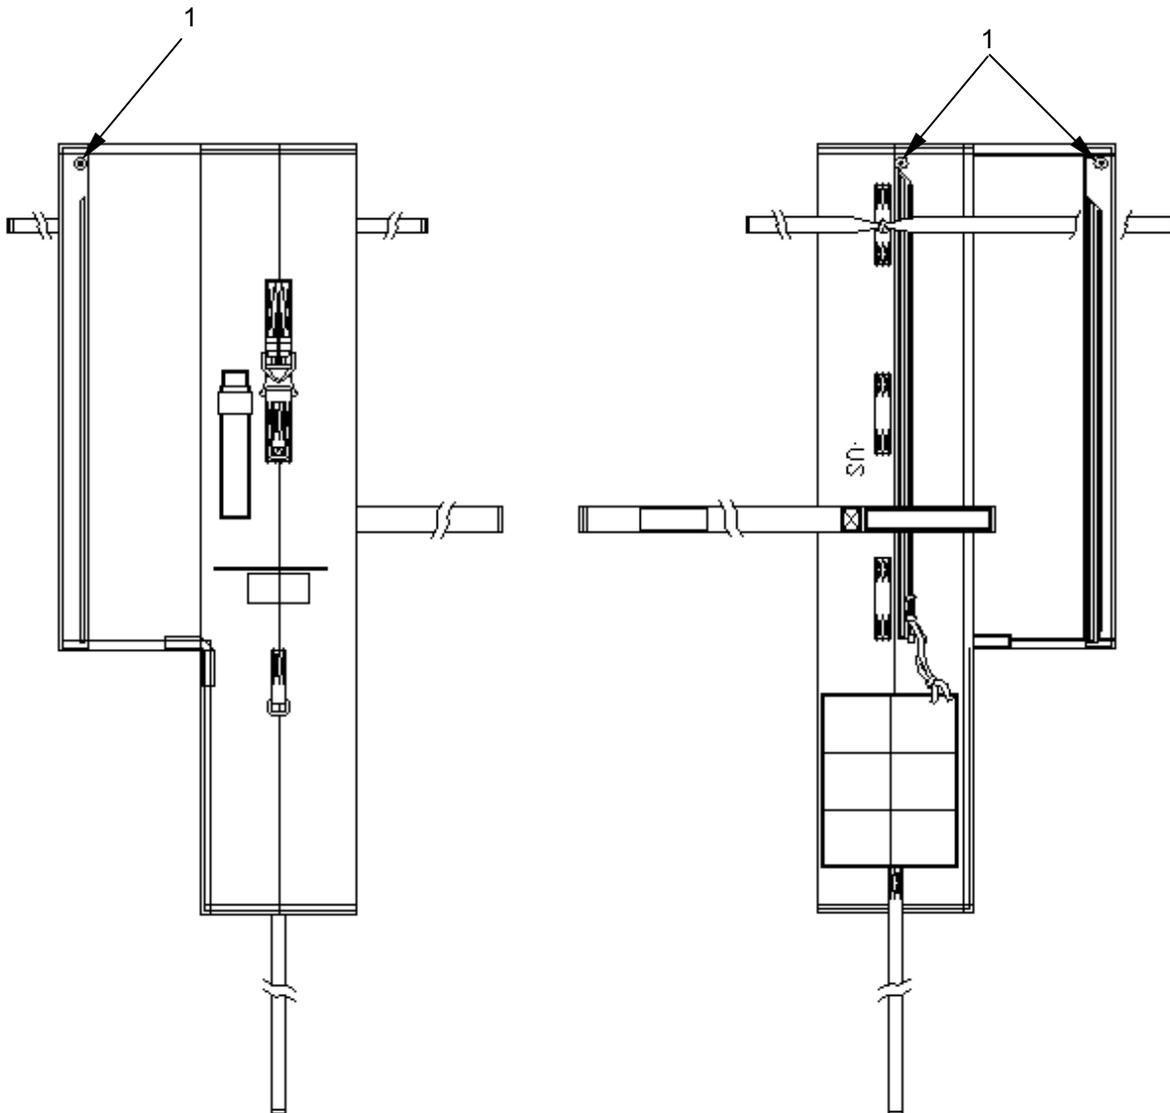

5. Adjusting strap. Replace a damaged adjusting strap **(1)** with a 25 1/2-inch length of 1-inch Type III nylon webbing as follows:
 - a. Cut stitching, and remove damaged strap.
 - b. Install an end clip **(3)** at one end of replacement webbing. If end clip is not available sear webbing end.
 - c. Cut stitching along side and bottom of case as needed to replace strap.
 - d. Position webbing on weapons case as in original construction, and sew a 2-inch 3-point WW stitch formation **(2)**. Overstitch end of webbing 1/8 of an inch. Use size 5 thread, 4 to 6 stitches per inch and a HD sewing machine.

6. Replacing Hardware.

- a. Snap fastener (1). Replace a damaged snap fastener with a serviceable like item from stock. Install fastener in accordance with procedures described in WP 0015 00.
- b. Other hardware items. Replace other damaged items of hardware on the weapons case with serviceable like items from stock. Do not attempt to straighten bent hardware or otherwise repair cracked or broken hardware. When it is necessary to cut any stitching to remove damaged hardware from webbing, replace hardware and webbing following procedures in the appropriate section of 5., above. Do not restitch the webbing.

INSPECT

Perform a before and after technical/rigger type inspection of the Stinger Missile Pack as outlined in WP 0008 00.

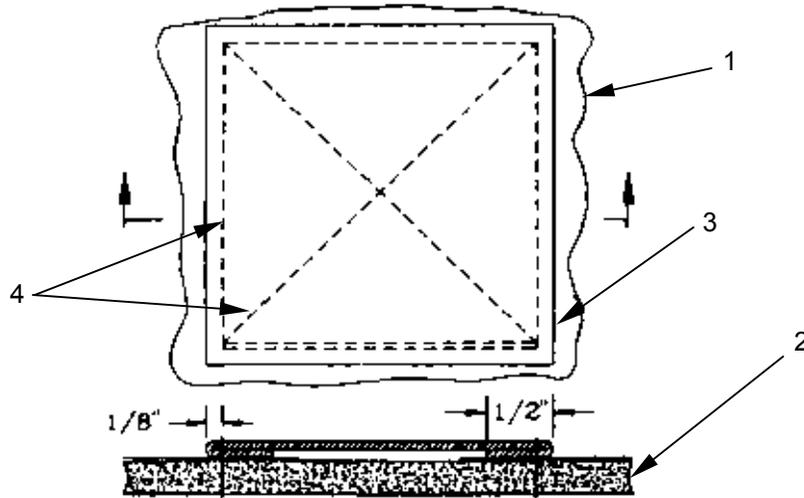

REPAIR

The nylon duck material of the pack body may be restitched, darned, and patched. The polyester felt material may be restitched and plugged as described below.

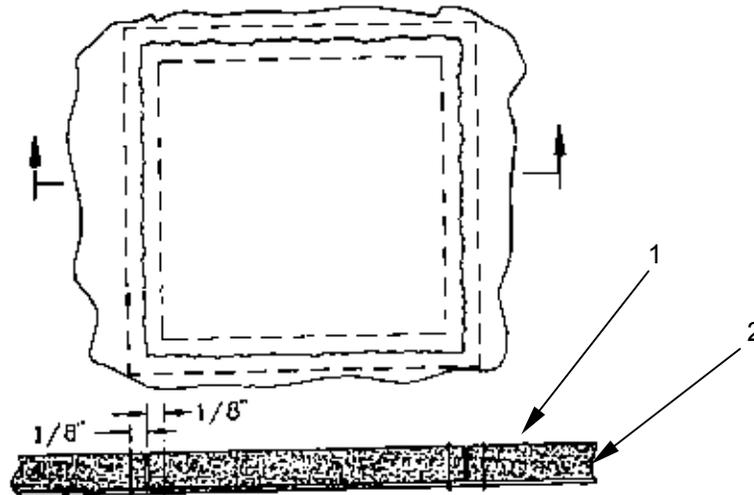

1. Restitching. Restitch the pack fabric **(1)** directly over old stitching using stitching specifications outlined in the appropriate repair procedures. Lock stitching at least $\frac{1}{2}$ -inch.
2. Darning. Darn a hole or tear in the pack fabric that does not exceed 1-inch in length or diameter using size E or FF thread and a darning machine. There is no limit to darns that may be applied, provided they do not weaken or reduce the original strength of the fabric more than 10%. If damage is in the lined portion of the pack body and only the cotton duck is damaged, darn through duck and felt. If felt is also damaged, remove damaged area before darning duck fabric. Then plug felt as in 3. c) below.
3. Patching. There is no limit to the number of times the pack body may be patched. Patch a hole or tear that exceeds 1-inch in length or diameter following procedures in a) or b) below. Use cotton duck cloth according to original construction for patching outside, and $\frac{1}{4}$ -inch thick felt for plugging inside lining. Use a HD sewing machine, size FF thread, and 6 to 9 stitches per inch.
 - a. To patch a lined portion of the pack **(1)** when the felt **(2)** is not damaged, cut nylon duck patch **(3)** 2-inches beyond circumference of damaged portion. Turn under edges of patch $\frac{1}{2}$ -inch and center patch **(3)** over damaged area. Sew patch to pack **(1)** with a double row of stitching **(4)** as shown.

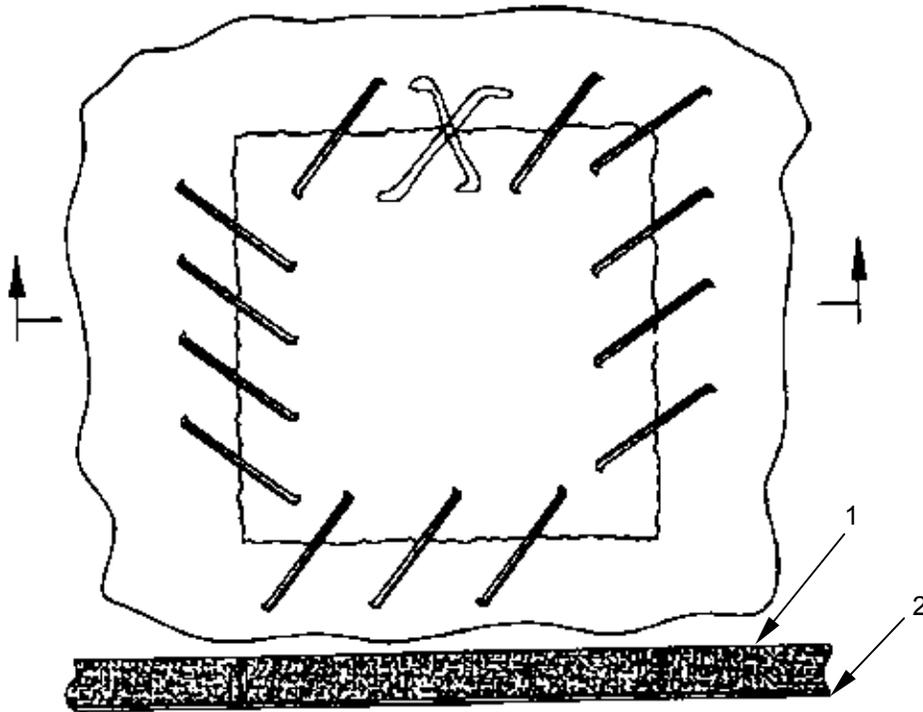

- b. To patch a lined portion of the pack (1) when the felt (2) is damaged, remove the damaged felt as described in c) below. Cut a piece of felt the same size as the piece removed, and position felt plug and cotton duck patch (3) (with edges turned under 1/2-inch) over damaged area. Sew a single box X stitch (4) formation as shown.

- c. To plug the felt (1) lining of pack, mark a rectangle around the damaged area. Remove the damaged felt while being careful not to damage the nylon duck material (2). Cut a piece of felt the size of the piece removed. Position felt plug into area cleared and sew as shown.

- d. If damage is in an area that cannot be sewed by machine, tack felt (1) plug securely to cotton duck (2) as shown using doubled and waxed size 3 nylon thread. Secure thread ends with suitable knot.

4. Repair of Binding Tape. Overlap the binding tape, extending the new tape at least 1-inch beyond the damaged tape. Stitch tape with two rows of stitching $\frac{1}{8}$ and $\frac{1}{4}$ -inches from edge of tape as in original construction using size FF thread, 6 to 9 stitches per inch and a HD sewing machine.
5. Repairing Webbing. The webbing on the pack may be restitched. Restitch loose, broken, or defective stitching according to original construction details and as outlined in the appropriate repair procedures.

REPLACE

Replacing Webbing. All webbing items may be replaced. Replacement will be accomplished in accordance with the original construction and as prescribed herein. Sear all cut ends of webbing before assembling webbing on pack.

NOTE

Splicing of the lowering line and attaching web is not authorized. Darning of the attaching web is not authorized.

1. Lowering line. Replace lowering line as described in WP 0018 00.
2. Ring Strap Assembly, O-Ring, and O-Ring Chape.

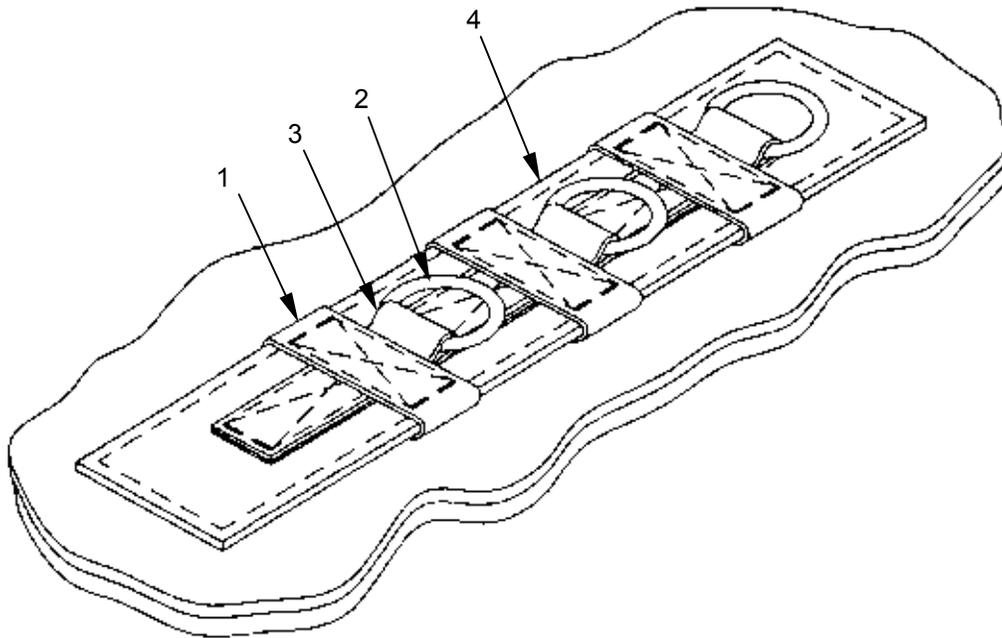

NOTE

Some packs may be equipped with O-Rings in lieu of D-Rings. Replace D-Rings if damaged, with O-Rings.

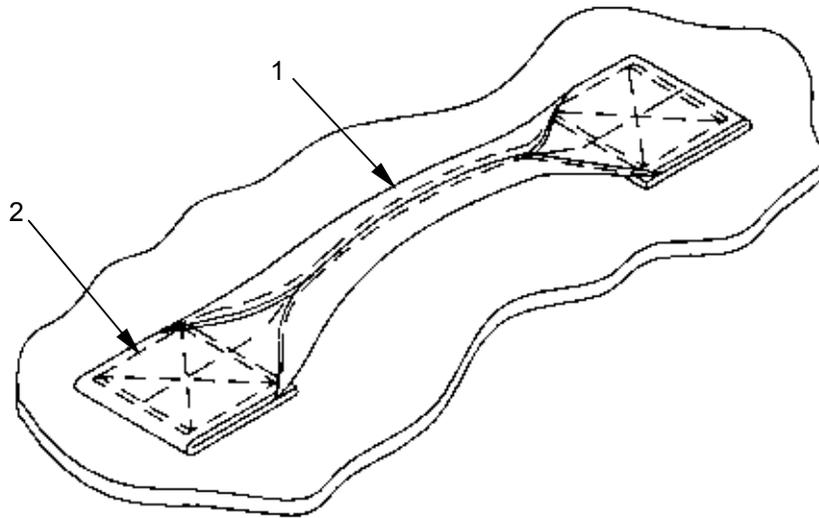

- a. O-Ring and O-Ring Chape.
 - (1) Cut stitching from Type III nylon retaining strap, **(1)** and remove strap. Replace with a 6-inch length of Type III nylon webbing if damaged. Sew box X stitching using size 5 thread, 4 to 6 stitches per inch and a HD sewing machine.
 - (2) Cut stitching from Type III nylon webbing which secures the O-ring **(2)** to the chape **(3)**. Replace damaged webbing with a 5 $\frac{1}{2}$ -inch length of Type III nylon webbing. Sew as in 1 above. Replace D-Ring with a serviceable O-Ring of the same type.

b. Ring Strap Assembly.

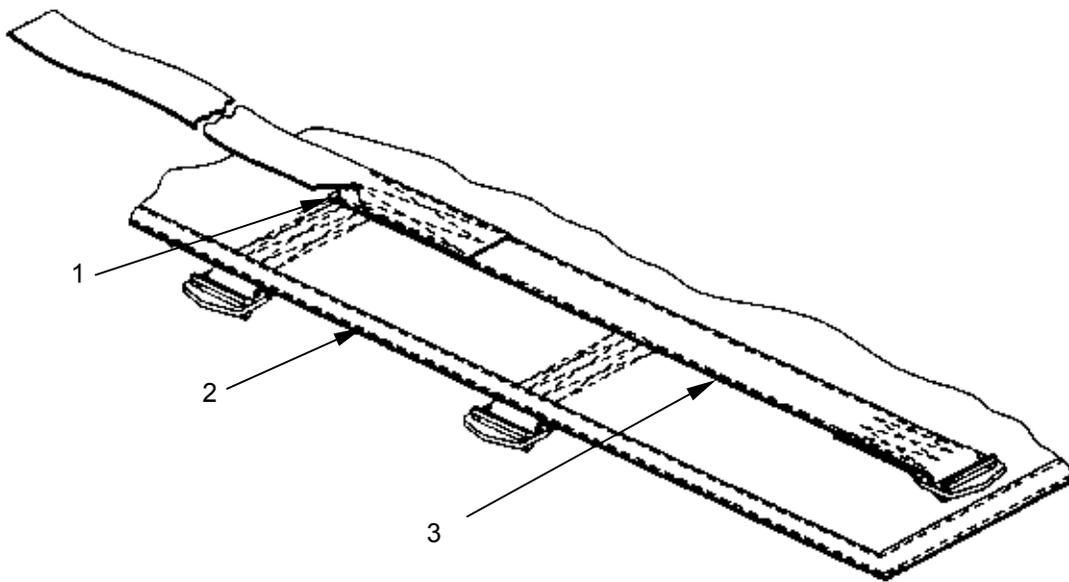

- (1) Cut stitching from Type III nylon webbing following steps a. 1 and 2 above. Set aside webbing and O-Rings.
- (2) Cut stitching from ring strap assembly (4) and remove. Replace ring strap assembly with a 10-inch length of Type X woven nylon webbing. Sew as in original construction using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine.

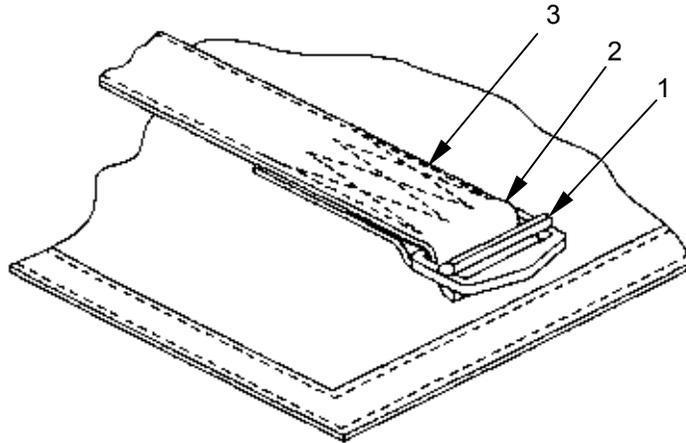

3. Carrying Handle Strap. Replace damaged carrying handle strap as follows:
 - a. Remove the damaged handle **(1)** by cutting and removing stitching of the two 2-inch box X patterns **(2)** that secure handle to the pack, and discard the damaged handle **(1)**.
 - b. Fabricate new handle of Type VIII woven nylon webbing according to details in WP 0053 00.
 - c. Turn under ends 1 ¹/₄-inch and position replacement strap in the original position of the handle. Sew using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine.

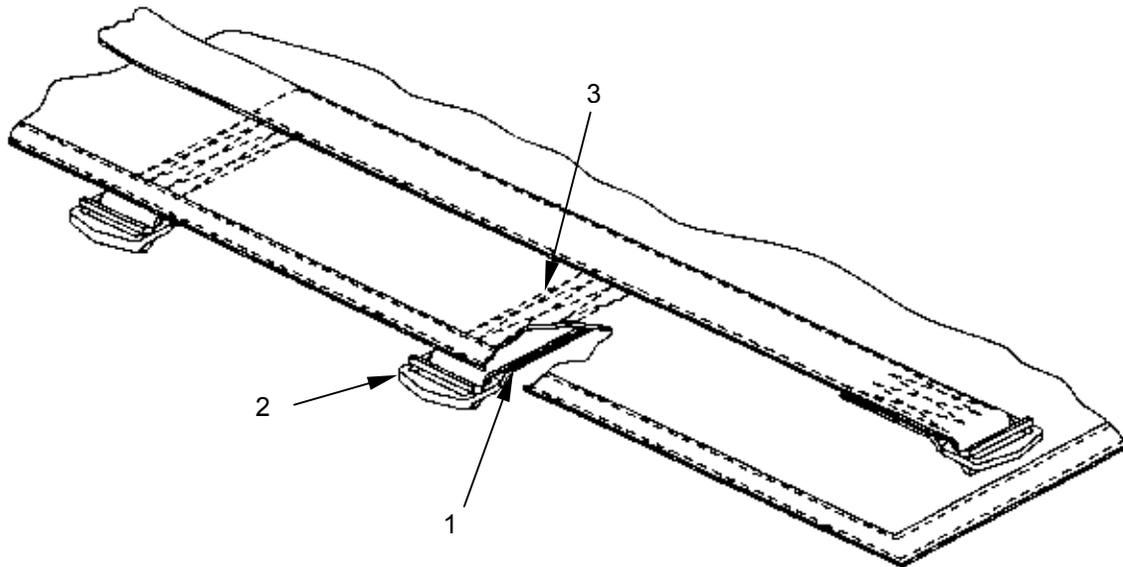

4. Side Securing Straps (running ends). Replace damaged running end of side securing strap as follows:
 - a. Cut strap (1) along stitching that secures strap to pack (2).
 - b. Cut a length of Type VIII nylon webbing equal to the length removed plus 3 1/2-inches. Sear ends.
 - c. Turn under one end 1/2-inch, and position replacement strap 3-inches beyond the cut webbing (3) end on the pack. Stitch with 3 point WW pattern as shown using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine.

5. Side Securing Strap Quick Fit Adapters. Replace damaged hardware as follows:
 - a. Remove adapter **(1)** by cutting the webbing chape **(2)** as close to the 3-point WW stitch pattern **(3)** as possible. Discard adapter.
 - b. Cut a 3 ³/₄-inch buffer of Type VIII nylon webbing and fold so ends are offset ¹/₂-inch.
 - c. Cut a 7 ¹/₂-inch adapter chape of Type VIII nylon webbing. Fold Webbing ¹/₂ and 3 ³/₄-inches from one end.
 - d. Place buffer and chape on serviceable adapter, position replacement on top of original, and sew with a 3-inch 3 point WW stitch formation using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine.

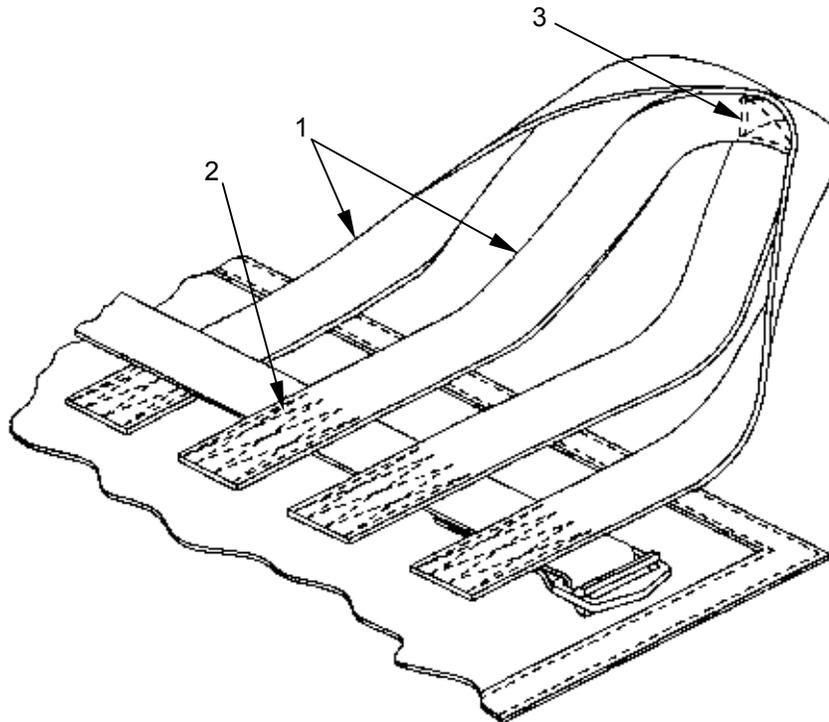

6. Forward End Securing Straps and Heavy Duty Adapters. Replace damaged forward end securing straps **(1)** and heavy duty adapters **(2)** as follows:
 - a. Remove damaged strap **(1)** by cutting along stitching **(3)** that secures strap to pack. Replace strap with a length of Type X nylon webbing equal to the length removed. Replace damaged adapter **(2)** with serviceable adapter of the same type.
 - b. Fold the webbing around the heavy-duty quick fit adapter **(2)** and position strap **(1)** on the pack in its original position, as shown. Stitch with 3-inch three point WW pattern as shown **(3)** using size 5 thread, 4 to 6 stitches per inch and an HD sewing machine.

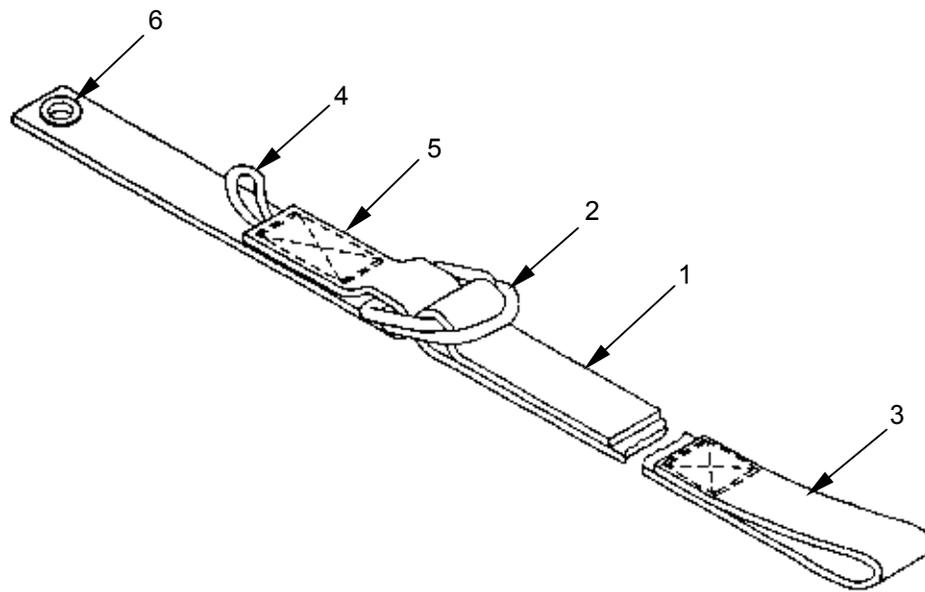

7. Aft End Securing Straps.

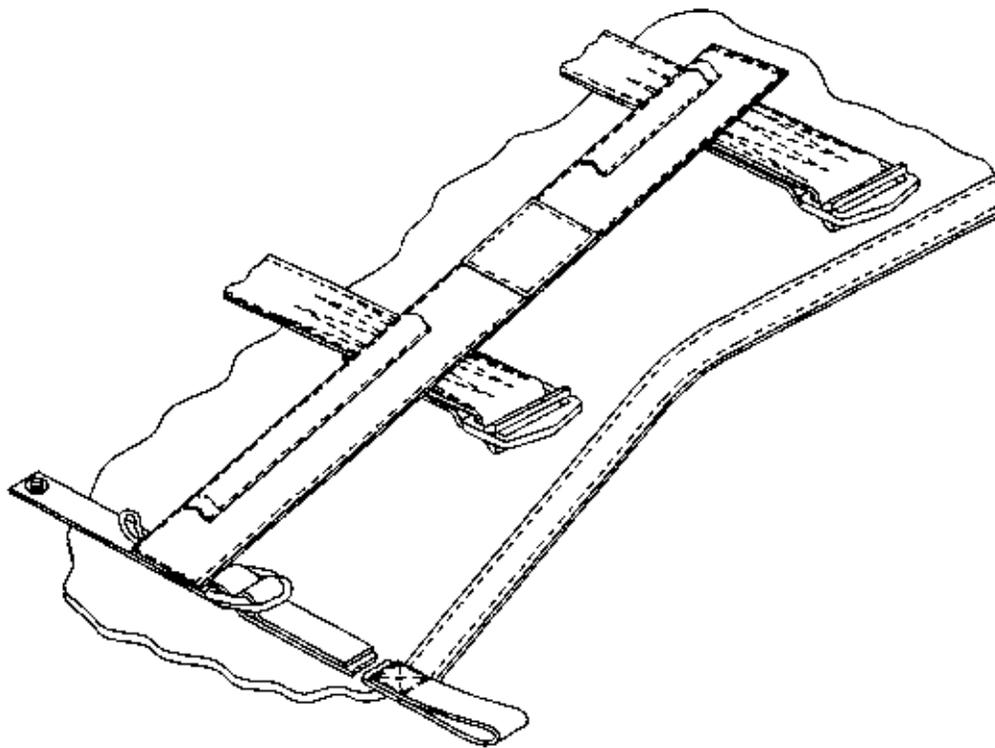

- a. Remove damaged aft end securing straps (1) by cutting along stitching (2) that secures straps to pack.
- b. Cut two lengths of type X nylon webbing equal to the lengths removed.
- c. Stitch the two lengths of webbing together, as in original, with a 2-inch double box X stitch (3) formation. Use size 5 thread, 4 to 6 stitches per inch and an HD sewing machine.
- d. Position the four free running ends of the replacement straps, as shown and stitch to the pack body with 3-inch three point WW stitch formation. Stitch as in (c) above.

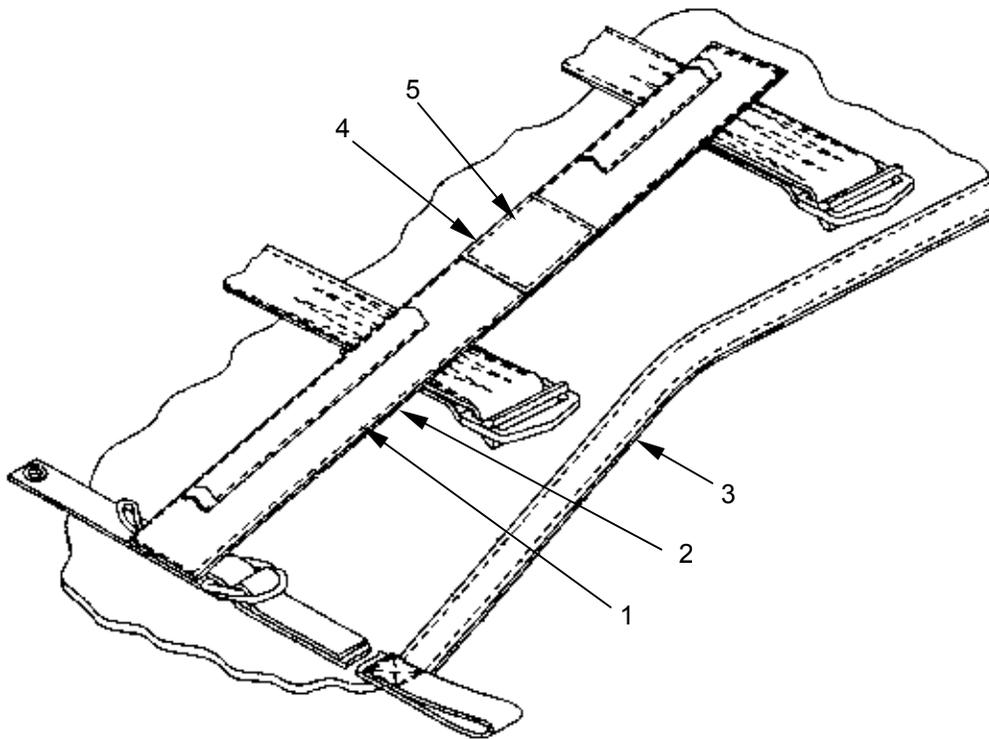

-
8. Chest Tiedown Assembly. Replace a damaged tiedown strap, D-Rings, grommet, Type III nylon loop, or chape as follows:
- a. Chest tiedown strap. Replace a damaged or missing tiedown strap **(1)** as follows:
 - (1) Remove the damaged strap **(1)** from the D-Rings **(2)** and chape.
 - (2) Cut a 36-inch length of Type III nylon webbing, sear one end, and stitch a 4-inch loop **(3)** in the other end using two bartacks. Use size E thread, 7 to 11 stitches per inch and a MD sewing machine.
 - (3) Route the replacement webbing through the D-Rings **(2)**.
 - b. D-Rings and Type III nylon loop. Replace damaged D-Ring **(2)**, and/or Type III nylon loop **(4)** as follows:
 - (1) Remove tiedown strap **(1)** from pack and set aside. Cut stitching on the chape **(5)** and remove and discard damaged D-Ring, and/or Type III nylon loop. Replace damaged Type III nylon loop **(4)** with a 5-inch piece of Type III nylon cord, red 21105. Replace a damaged D-Ring **(2)** with serviceable D-Ring of the same type.
 - (2) Sew to pack as shown and with box X stitch. Use size E thread, 7 to 11 stitches per inch and a MD sewing machine.
 - c. Chape **(5)** and grommet **(6)**. Replace damaged chape and grommet as follows:
 - (1) Remove tiedown strap **(1)** from pack and set aside. Cut stitching on the chape **(5)** and remove chape from D-Rings **(2)** and Type III nylon loop. Set components aside.
 - (2) Cut an 8 $\frac{1}{8}$ -inch length of Type III nylon webbing, fold over two D-Rings and Type III nylon loop. Remove damaged grommet and install a new one as described in WP 0015 00.
 - (3) Hand tack and position the replacement chape as shown.
 - (4) Route tiedown strap around D-Rings.

9. Leg Tiedown Assembly. Replace a damaged tiedown strap, D-Rings, grommet, Type III nylon loop, or chape as follows:
 - a. Leg tiedown strap. Replace the leg tiedown strap following paragraph 8. a) above, except cut a 60-inch length of bulked 1-inch nylon webbing in lieu of the 36-inch length.
 - b. D-Rings, and Type III nylon loop. Replace a damaged D-Ring, and/or Type III nylon loop following paragraph 8. (b) ensuring that the new chape is routed under the cable guide assembly strap as shown.
 - c. Grommet and Chape. Replace damaged grommet and/or chape following paragraph 8. c) ensuring that the new chape is routed under the cable guide assembly strap as shown.

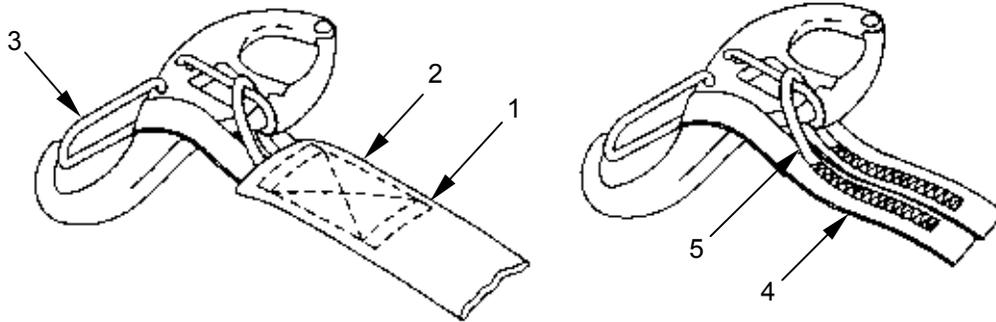

10. Cable Guide Assembly. Replace a damaged cable guide as follows:
 - a. Cut stitching **(1)** that secures the cable guide **(2)** to the pack **(3)**.
 - b. Cut an appropriate piece of Type II nylon webbing equal in size to the piece being replaced.
 - c. Stitch as in original using size FF thread, 6 to 9 stitches per inch and a MD sewing machine.
11. Pile Fastener. Replace any damaged or missing pile fastener **(4)** on the pack **(3)** as follows:
 - a. Cut stitching **(5)** that secures the pile fastener to the pack.
 - b. Cut an appropriate piece of pile tape, as required, equal in size to the piece being replaced.
 - c. Stitch to pack as in original using size FF thread, 6 to 9 stitches per inch and a MD sewing machine.

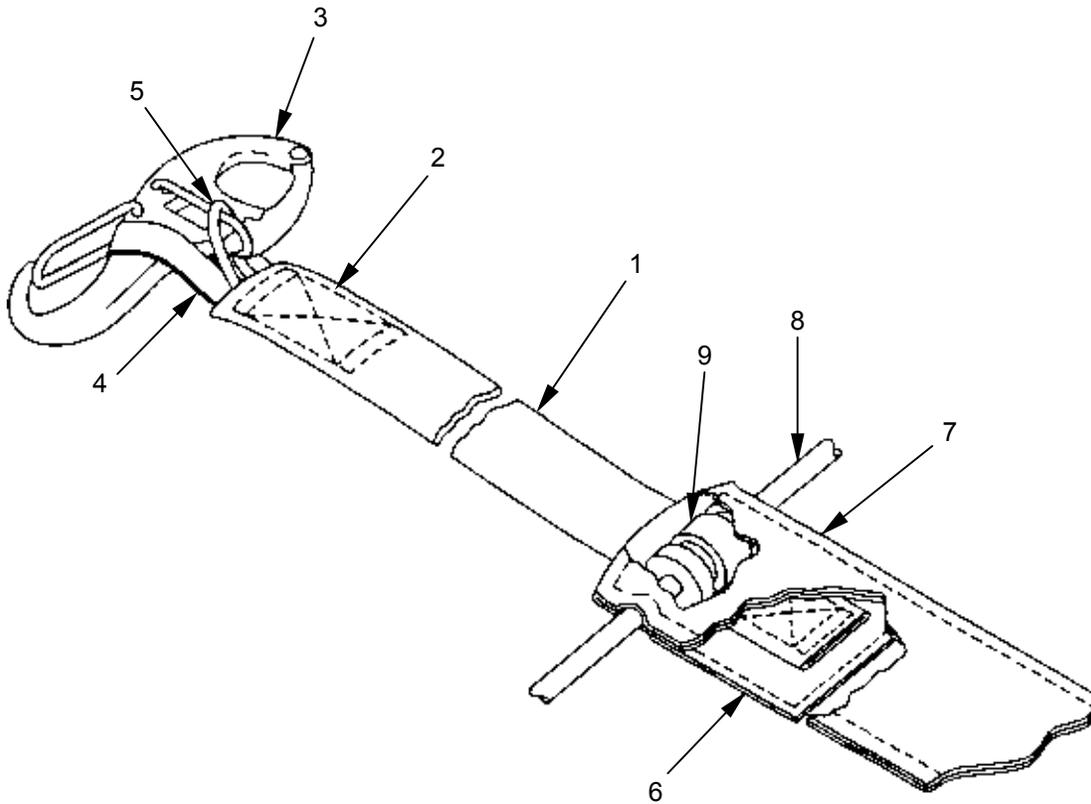

12. Quick-Release Assembly and Snap Shackle. Replace damaged snap shackle, 1-inch webbing, single pull handle, coated wire and swaging as follows:

- a. Shackle and loop assembly. Replace any damaged part of the shackle and loop assembly (1) as follows:

- (1) Cut stitching from webbing (2) and remove snap shackle (3), 1/2-inch tape (4) and Type III nylon loop (5). Discard and replace damaged components. Replace 1/2-inch tape with 7-inch length of Type IV 1/2-inch nylon tape. Replace nylon loop with 7-inch length of Type III nylon cord. Sew as shown using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine.
 - (2) Sew assembly to webbing with box X stitch as shown, using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine.
- b. 1-inch Webbing. Replace damaged webbing (1) by shackle and loop assembly as in a 1 above. Set assembly aside.
- (1) Cut stitching from pile fastener (6) and 1-inch webbing (1) on the release handle (7) and remove and discard webbing. Replace with 12 1/2-inch length of nylon webbing.
 - (2) Assemble webbing (1), snap shackle (3), 1/2-inch tape (4), and Type III nylon loop (5) on release handle (7) as shown and using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine.
- c. Release Handle, coated wire and swaging.
- (1) Cut stitching on pile fastener (6) and webbing (1) on the release handle (7) and remove release handle. Set aside pile fastener and webbing.
 - (2) Cut stitching on release handle (7) enough to remove coated wire (8) as shown. Discard damaged components.
 - (3) Replace damaged release handle (7) with an 18-1/2-inch length of Type VIII woven nylon webbing, yellow. Replace damaged wire (8) and swaging (9) with a 25 3/4-inch length of Type IIB, 5/32-inch O.D. coated wire rope and 5/32-inch swaging sleeve. Swage swaging sleeve as shown.

- d. Assemble components as in original construction. Sew using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine

13. Extension Sling. Replace damaged extension sling, D-Ring, and 4-inch length of Type X nylon webbing as follows:

a. D-Ring and 4-inch nylon webbing. Replace damaged D-Ring (1) and 4-inch nylon webbing (2) as follows:

(1) Cut stitching from hook fastener (3) on D-Ring end of extension sling (4), remove and set aside fastener. Cut stitching (5) that supports D-Ring (1) and 4 inch nylon webbing (2) and remove D-Ring and webbing. Replace D-Ring (1) with a serviceable item. Replace 4-inch webbing with a 4-inch length of Type X woven nylon webbing.

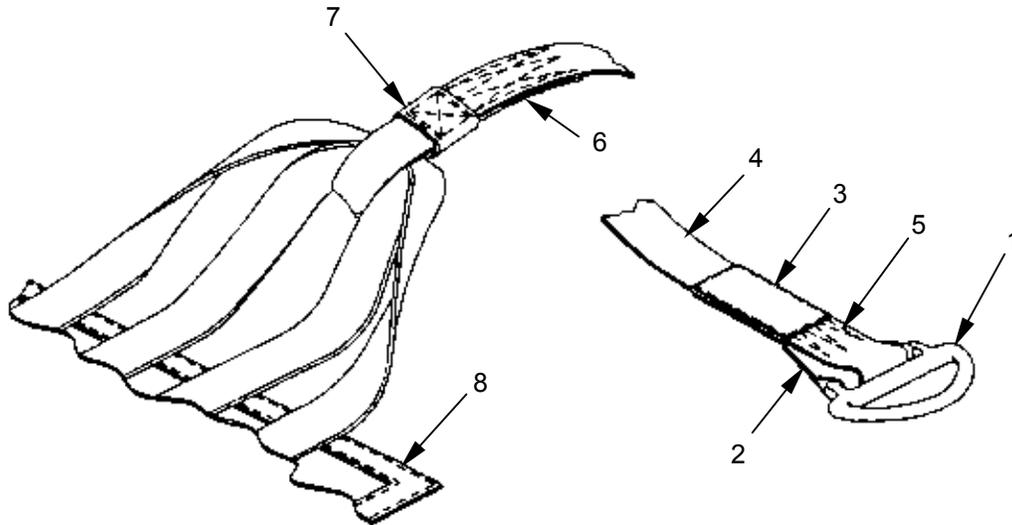

(2) Sew D-Ring and hook fastener to extension sling as shown using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine.

b. Extension sling (6) and retaining strap (7). Replace damaged extension sling and retaining strap as follows:

(1) Cut extension sling (6) from pack body (8).

(2) Follow step a) above for replacing D-Ring and 4-inch webbing except discard damaged extension sling (6) and replace with 78-inch length of 1-inch woven nylon webbing. Replace 3 1/2-inch webbing retainer (7) with a 3 1/2-inch length of Type II woven nylon webbing.

(3) Sew sling as shown and as in a) 2 above.

END OF WORK PACKAGE

ANCILLARY EQUIPMENT FOR PERSONNEL PARACHUTE SYSTEM

RELEASE ASSEMBLY
INSPECT, REPAIR, REPLACE

INITIAL SETUP:

Tools

Knife (WP 0034 00, Table 2, Item 6)
Shears (WP 0034 00, Table 2, Item 20)
Sewing Machine, Darning (WP 0034 00, Table 2, Item 15)
Sewing Machine MD (WP 0034 00, Table 2, Item 18)

Personnel Required

92R(10) Parachute Rigger

Materials/Parts

Tape, textile (WP 0052 00, Table 1, Item 44)
Thread, Nylon, size E (WP 0052 00, Table 1, Item 50)
Thread, nylon, size FF (WP 0052 00, Table 1, Item 51)
Cord, fibrous nylon Type III (WP 0052 00, Table 1, Item 12)
Webbing, tubular, nylon, 1-inch (WP 0052 00, Table 1, Item 71)
Cord, nylon, Type III, red (WP 0052 00, Table 1, Item 11)

Equipment Condition

Release Assembly should be clean and dry.
Place the assembly on worktable.

INSPECT

Perform a before and after technical/rigger type inspection of the Release Assembly as outlined in WP 0008 00.

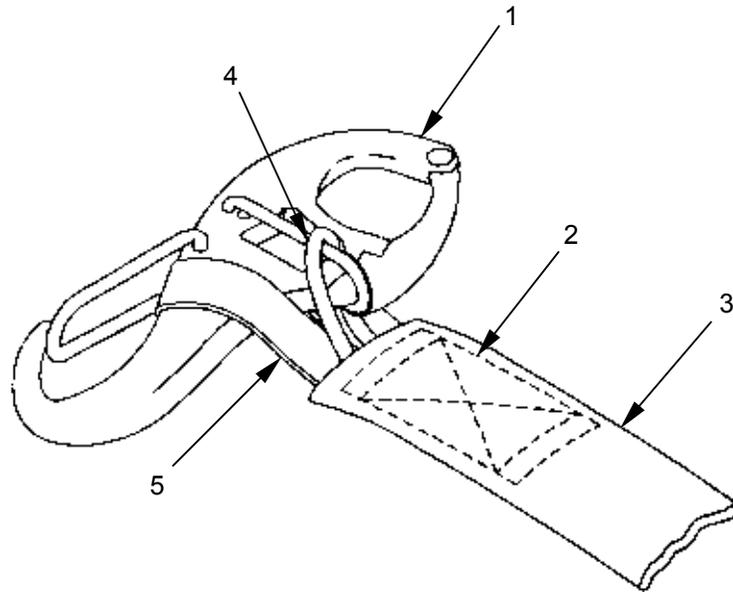

REPAIR

The webbing on the release assembly may be restitched or darned. Splicing is not authorized. Restitch loose, broken, or defective stitching according to original construction details using size FF thread, 6 to 9 stitches per inch and a MD sewing machine. Darn using size E thread and a DN machine.

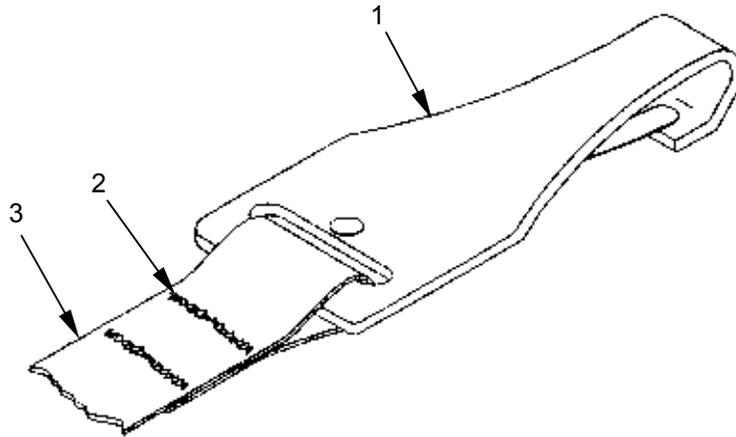

REPLACE

Replacement of the webbing components on the release assembly is not authorized. If assembly webbing becomes unserviceable and cannot be repaired, remove and retain any serviceable hardware, and discard webbing. Replace any hardware item on an otherwise serviceable release assembly as follows:

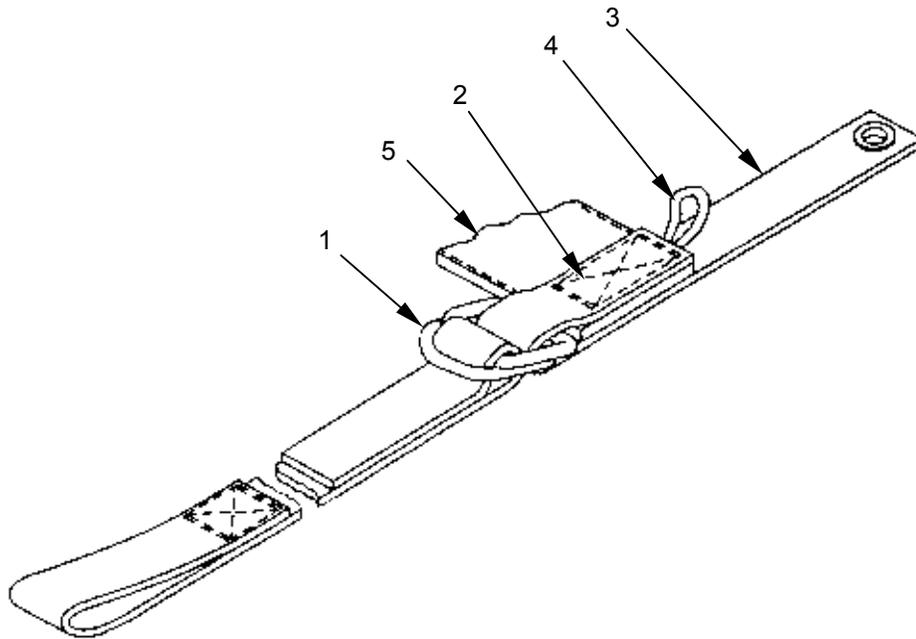

1. Shackle. Replace a damaged snap shackle **(1)** by cutting the stitching **(2)** that secures the item to the 1-inch tubular nylon webbing **(3)**.
 - a. Cut nylon cord **(4)** and tape retainers **(5)** from damaged shackle. Cut nylon cord **(4)** and tape retainers **(5)** from damaged shackle.
 - b. Cut a 6-inch length of nylon tape retainer **(5)** and a 5-inch length of nylon cord retainer **(4)**.
 - c. Install retainers on new shackle **(1)** as shown. Sandwich retainer ends between 1-inch tubular nylon webbing **(3)** and stitch with a box X stitch **(2)** using size FF thread, 6 to 9 stitches per inch and a MD sewing machine.

2. Snap Hook. Replace a damaged snap hook (1) by cutting the stitching (2) that secures the item to the 1-inch nylon tape (3).
 - a. Remove the damaged snap hook (1) and discard.
 - b. Thread 1-inch nylon tape (3), through serviceable snap hook (1) and fold back 1 3/8-inch.
 - c. Secure new snap hook (1) with two straight stitch formations (2) as shown using size FF thread, 6 to 9 stitches per inch and a MD sewing machine.

3. D-Ring. Replace a damaged D-Ring (1) by cutting the stitching (2) that secures the item to the 1-inch tubular nylon webbing (3).
 - a. Remove the damaged D-Ring(s) (1) and discard.
 - b. Thread 1-inch tubular nylon webbing (3) through new D-Ring(s) (1) and fold tubular nylon webbing (3) over red nylon cord (4) and release assembly strap (5).
 - c. Position tubular webbing (3) on release assembly strap (5) as in original construction and secure with a box X stitch (2) using size FF thread, 6 to 9 stitches per inch and a MD sewing machine.

INSPECT

Perform a before and after technical/rigger type inspection of the Front Mount Container as outlined in WP 0008 00.

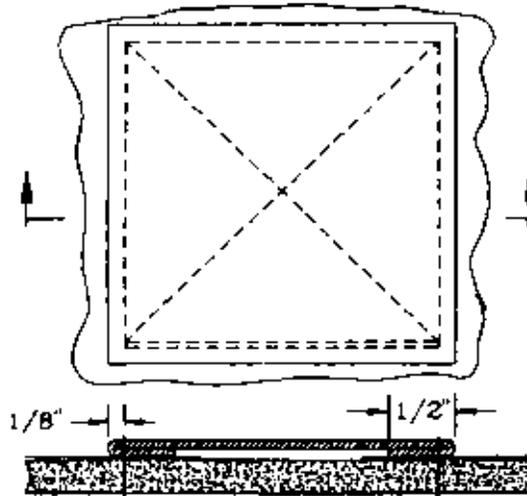

REPAIR

The nylon duck material of the container and attached flap assemblies may be restitched, darned, and patched. The felt lining may be restitched and plugged. When making any of these repairs, remove stitching as necessary to gain access to the damaged area. After repairs have been made, replace any stitching that has been removed, as in original construction or as specified in each procedure. Repair duck and felt fabrics by restitching, darning and patching as described below.

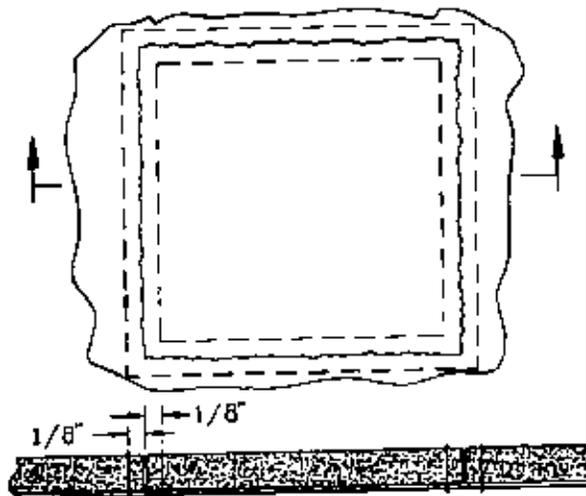

1. Restitching. Restitch the container fabric directly over old stitching using size FF thread, 6 to 9 stitches per inch, and a MD sewing machine. Lock stitching at least $\frac{1}{2}$ -inch.
2. Darning. Darn a hole or tear in the container fabric that does not exceed 1-inch in length or diameter using size E thread and a darning machine. There is no limit to darns that may be applied, provided they do not weaken or reduce the original strength of the fabric more than 10%. If damage is in the lined portion of the container body and only the cotton duck is damaged, darn through duck and felt. If felt is also damaged, remove damaged area before darning duck fabric. Then plug felt as in 3. c) below.
3. Patching. There is no limit to the number of times the container body may be patched. Patch a hole or tear that exceeds 1-inch in length or diameter following procedures in (1) or (2) below. Use nylon duck cloth according to original construction for patching outside, and $\frac{1}{4}$ -inch thick felt for plugging inside lining.
 - a. To patch a lined portion of the container when the felt is not damaged, cut nylon duck patch 2-inches beyond circumference of damaged portion. Turn under edges of patch $\frac{1}{2}$ -inch and center patch over damaged area. Sew patch to container with a double row of stitching as shown.

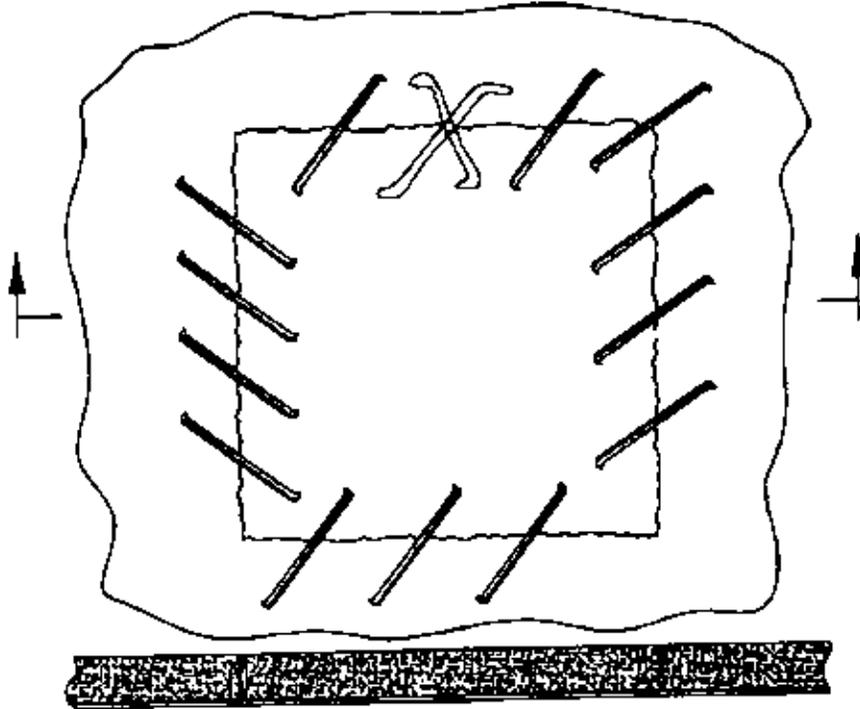

- b. To patch a lined portion of the container when the felt is damaged, remove the damaged felt as described in c below. Cut a piece of felt the same size as the piece removed, and position felt plug and cotton duck patch (with edges turned under 1/2-inch) over damaged area. Sew a single box X stitch formation as shown.

- c. To plug the felt lining of container, mark a rectangle around the damaged area. Remove the damaged felt while being careful not to damage the nylon duck material. Cut a piece of felt the size of the piece removed. Position felt plug into area cleared and sew as shown.

- d. If damage is in an area that cannot be sewed by machine, tack felt plug securely to nylon duck as shown using doubled and waxed size 3 nylon thread. Secure thread ends with suitable knot.

4. Repair of Binding Tape. Overlap the binding tape, extending the new tape at least 1-inch beyond the damaged tape. Stitch tape with two rows of stitching $\frac{1}{8}$ and $\frac{1}{4}$ -inches from edge of tape as in original construction using size FF thread, 6 to 9 stitches per inch and a MD sewing machine.
5. Repairing Webbing. The webbing on the pack may be restitched or darned. Restitch loose, broken, or defective stitching according to original construction details using size FF thread, 6 to 9 stitches per inch and a MD sewing machine. Darn using size E thread and a darning machine.

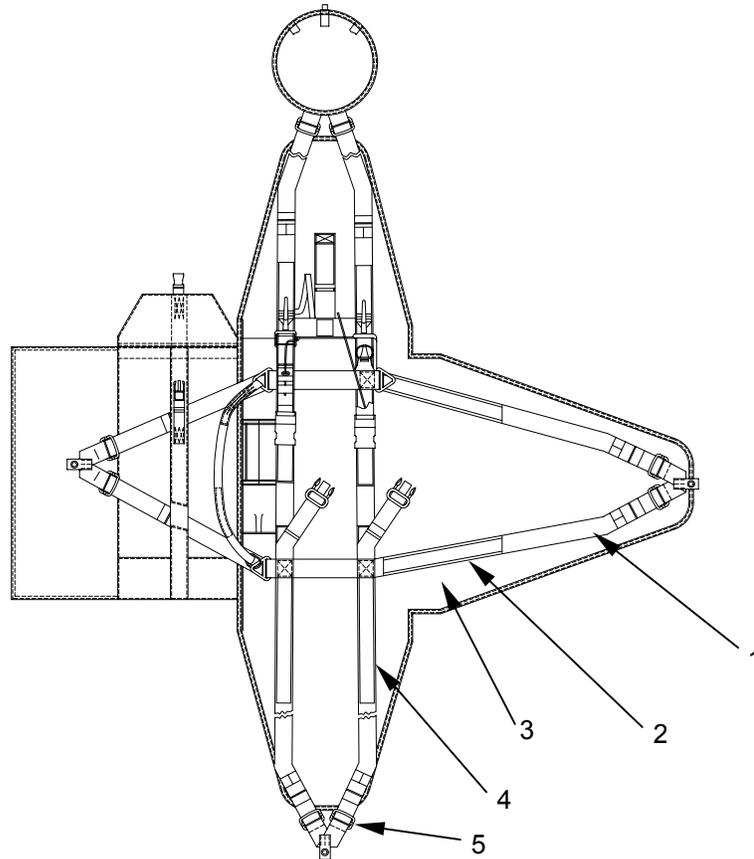

REPLACE

Replacing Webbing. All webbing in **(1)** through **(11)** below may be replaced. Replacement will be accomplished in accordance with the original construction and as prescribed herein. Seal all cut ends of webbing before assembling webbing on pack.

NOTE

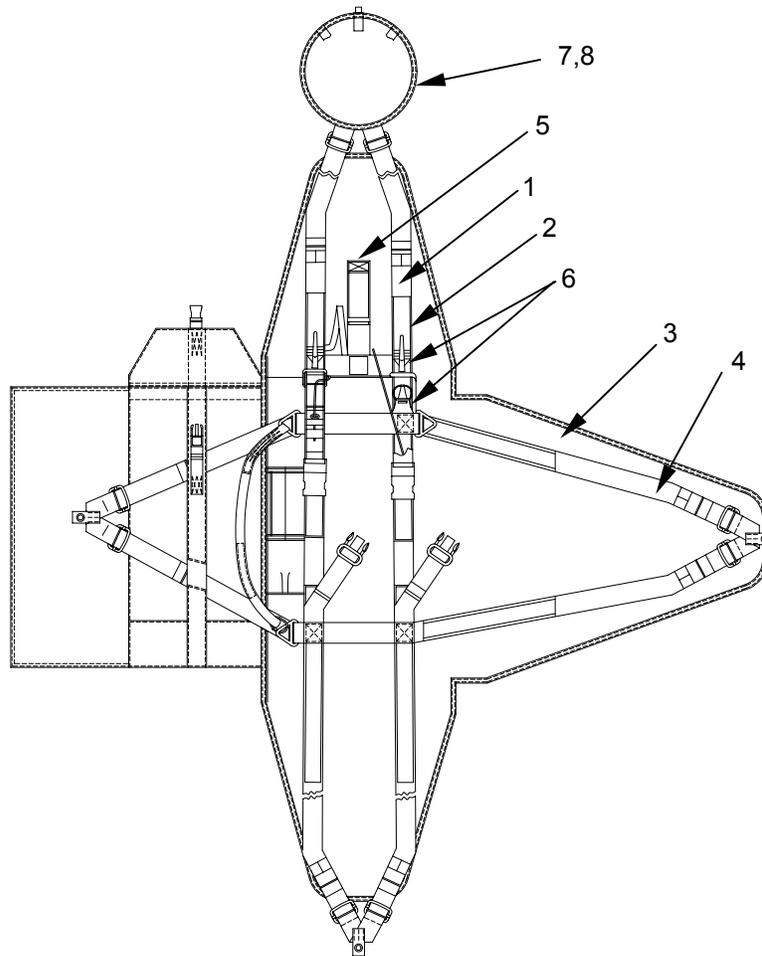

Splicing and darning of the attaching strap assembly is not authorized.

1. Horizontal Restraint Assembly. To replace this assembly **(1)** proceed as follows:
 - a. Cut the stitching **(2)** that secures the damaged assembly to the container body **(3)** and vertical restraint assembly **(4)**.
 - b. Cut off any serviceable hardware items and closing assemblies **(5)** and set aside.
 - c. Fabricate new assembly **(1)** as described in WP 0053 00, using salvaged, serviceable hardware items **(5)** and closing assemblies removed as applicable.
 - d. Place new horizontal restraint assembly **(1)** onto container **(3)** as shown and sew as in original construction using size 3 thread, 5 to 8 stitches per inch and a MD sewing machine.

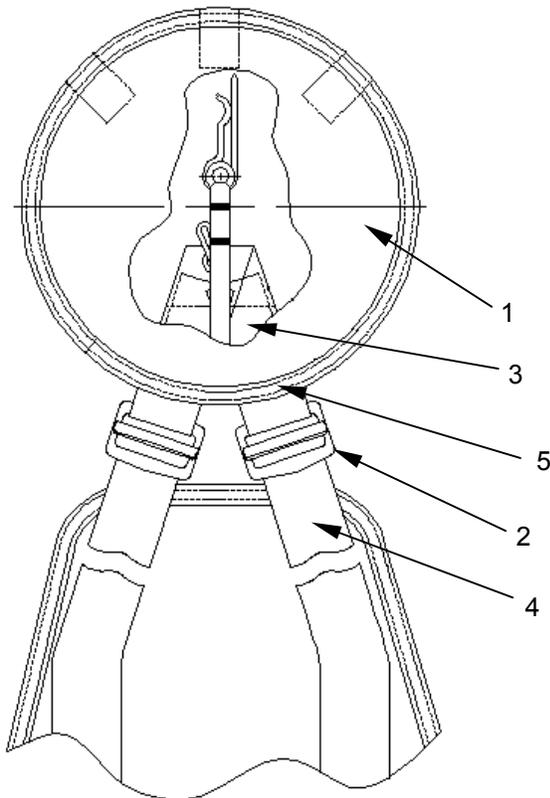

0027 00-5

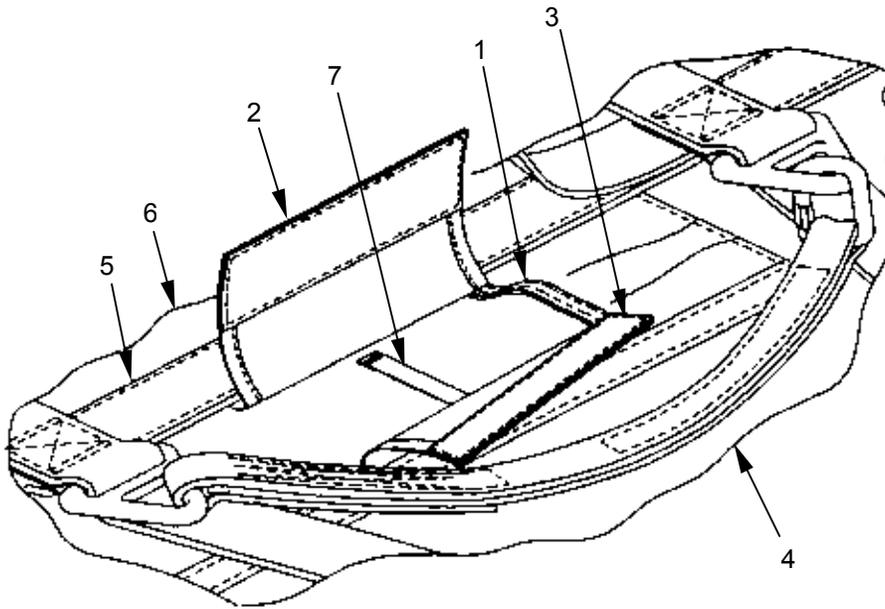

2. Vertical Restraint Assembly. To replace this assembly (1) proceed as follows:
 - a. Cut the stitching (2) that secures the damaged assembly to the container body (3) horizontal restraint assembly (4) and the release assembly (5).
 - b. Remove serviceable hardware items (6) the flap assemblies (7) and the closing assembly (8).
 - c. Fabricate new vertical restraint assembly (1) as described in WP 0053 00, using salvaged, serviceable hardware items (6) and closing assembly (8) removed, as applicable.
 - d. Place new vertical restraint assembly (1) onto container (3) as shown and sew as in original construction using size 3 thread, 5 to 8 stitches per inch and a MD sewing machine.

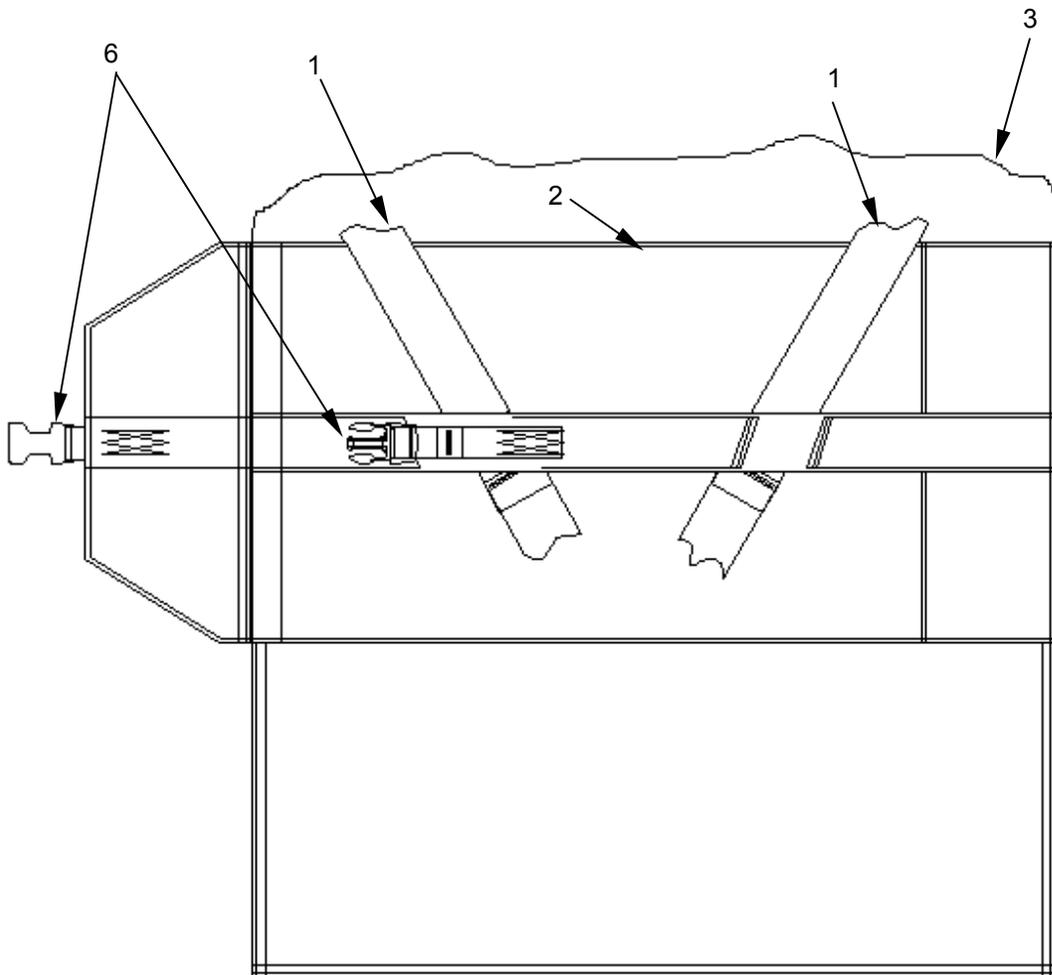

3. Closing Flap Assembly. To replace this assembly (1) proceed as follows:
 - a. Remove the reversible quick fit adapters (2) on the restraining loop assembly (3) from the vertical restraint assembly (4). Remove the flap assembly (1) from the restraining loop assembly (3) by cutting the stitching (5) holding these assemblies together.
 - b. If the restraining loop assembly (3) is also being replaced, remove serviceable quick fit adapters (2) and set aside.
 - c. Fabricate new closing flap assembly (1) and restraining loop assembly (3), if required, as described in WP 0053 00.
 - d. Attach quick fit adapters (2) on restraining loop assembly (3) with new closing flap assembly (1) onto vertical restraint assembly (4).

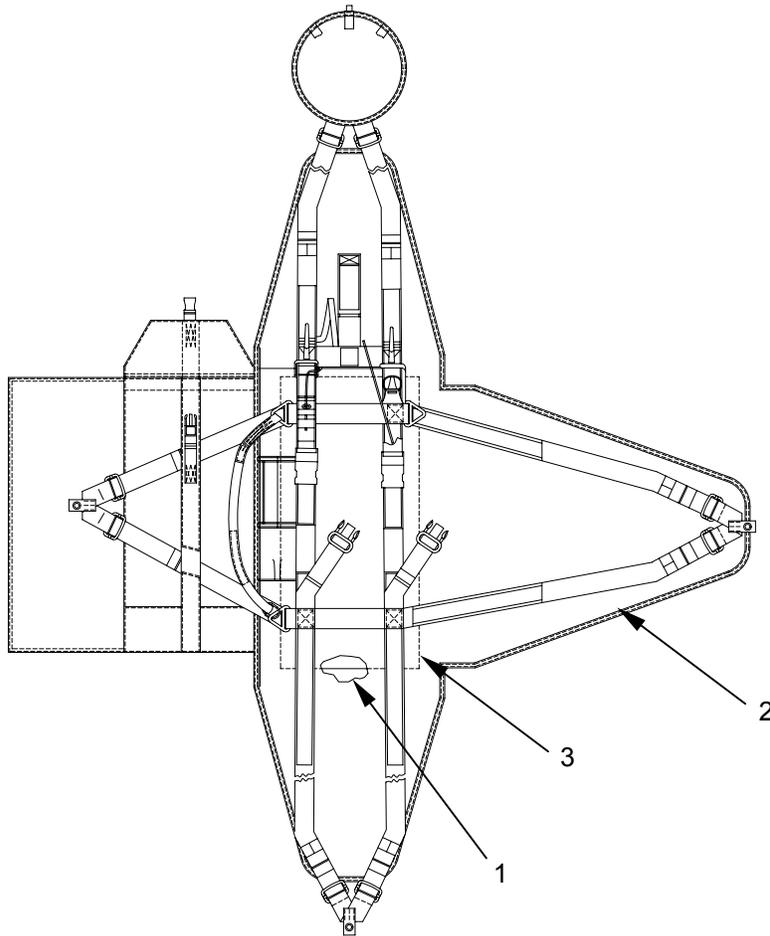

4. Pocket Assembly, Lowering Line, Closure Flap Assembly, and Inner Flap Assembly. To replace these assemblies proceed as follows:
 - a. Cut the stitching that secures the damaged pocket (1), closure (2) and inner flap assembly (3) to the container body (4), vertical restraint assembly (5) and the side container assembly (6).
 - b. Remove nylon tape loop (7) from container body if damaged.
 - c. Fabricate new pocket (1), closure flap (2), and inner flap (3) as described in WP 0053 00.
 - d. Place new pocket (1), closure flap (2), and inner flap (3) onto container body (4) as shown and sew using size 3 thread, 5 to 8 stitches per inch and a MD sewing machine.

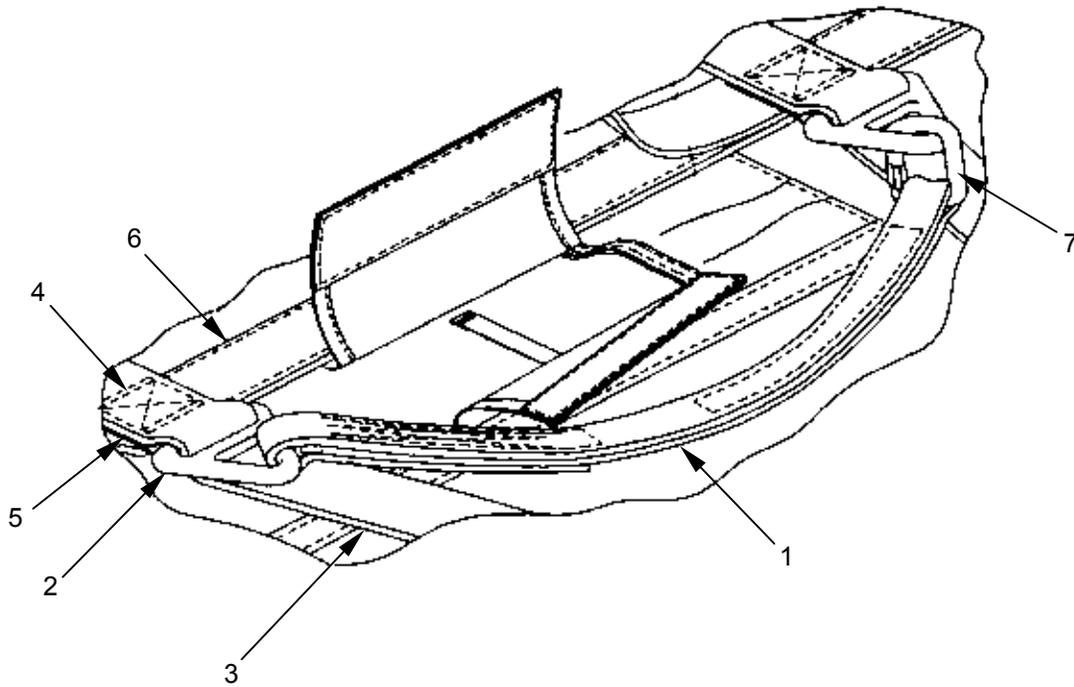

5. Container Assembly, Side. To replace this assembly proceed as follows:
 - a. Remove the horizontal restraint assembly straps (1) from the side container (2).
 - b. Cut the stitching that secures the damaged container (2), to the container body (3).
 - c. Remove serviceable hardware items (6) and set aside.
 - d. Fabricate new container (2) as described in WP 0053 00.
 - e. Place new container (2), onto container body (3) as shown and sew using size 3 thread, 5 to 8 stitches per inch and a MD sewing machine.
 - f. Reinstall the horizontal restraint assembly straps (1) onto the side container (2).

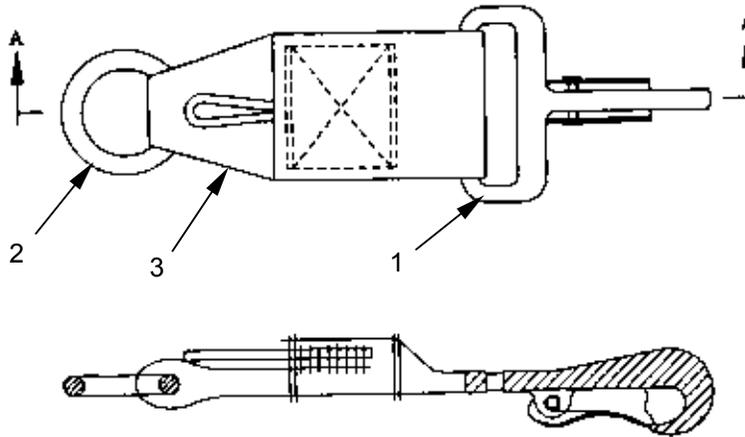

6. Kit, Bag Assembly, Internal. To replace this assembly proceed as follows:
 - a. Cut the stitching (3) that secures the damaged bag (1), to the container body (2).
 - b. Fabricate new bag assembly (1) as described in WP 0053 00.
 - c. Sew new bag assembly (1) to container (2) using size 3 thread, 5 to 8 stitches per inch and a MD sewing machine.

7. Bridle Assembly. To replace this assembly proceed as follows:
 - a. Cut the damaged bridle assembly (1), from the triangle link (2) holding it to the horizontal restraint assembly (3). If link (2) is to be replaced, cut the stitching (4) holding the link chape (5) to the horizontal (3) and vertical restraint assemblies (6).
 - b. Remove rapid connector link (7) from bridle assembly (1).
 - c. Fabricate new bridle assembly (1) as described in WP 0053 00.
 - d. Attach new bridle assembly (1) by threading triangular link (2) to chape and restitching chape with a box X stitch to the vertical restraint assembly using size 3 thread, 5 to 8 stitches per inch and a MD sewing machine. Connect the rapid connector link (7) to the other triangular link.

8. Attaching Strap Assembly. To replace this assembly proceed as follows:
- Remove serviceable snap hook (1) and ring (2) by cutting the webbing (3), and set aside.
 - Fabricate new attaching strap assembly (3) as described in WP 0053 00, using serviceable hardware items salvaged as applicable.

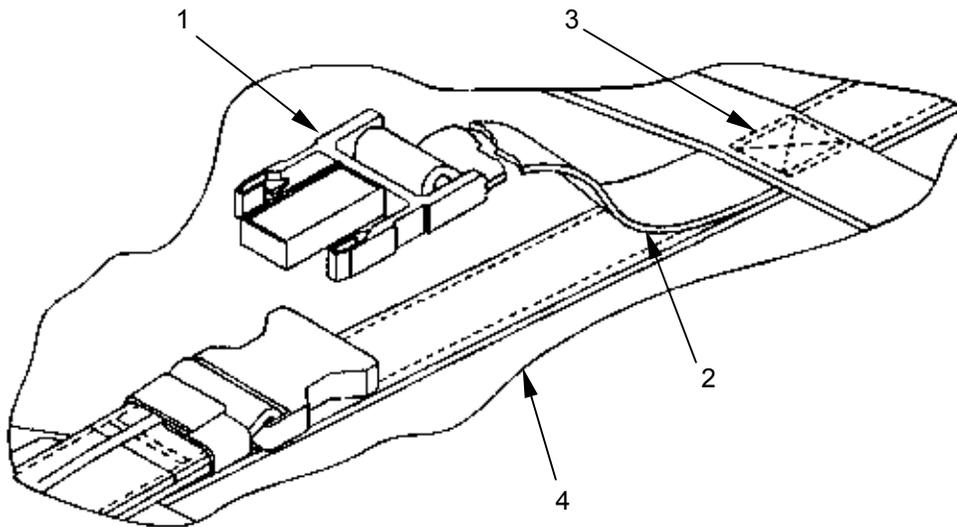

SECTION A-A

9. Leg strap Assembly. To replace this assembly proceed as follows:
 - a. Remove serviceable plastic side release (1) by cutting the webbing (2), and set aside.
 - b. Cut webbing and remove damaged part, or if the entire strap is to be replaced, cut stitching (3) that holds the strap to the container (4).

NOTE

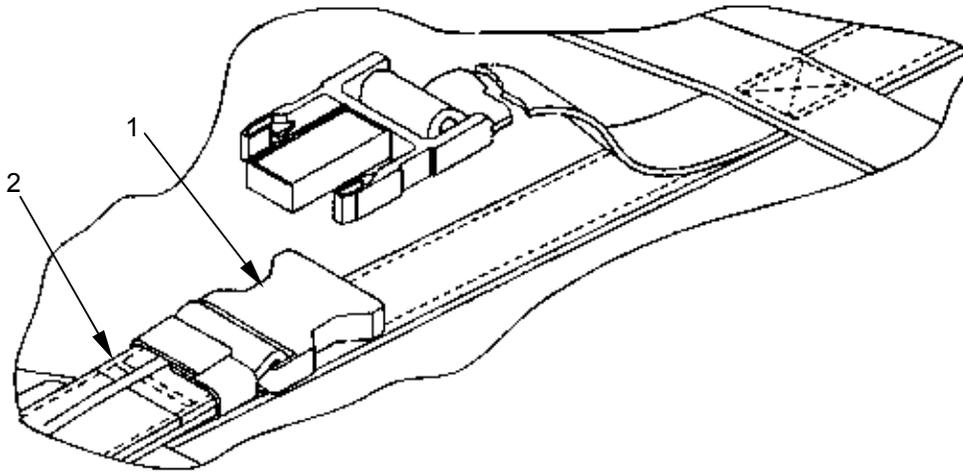

Splice a leg strap using size 5 thread, 4-6 stitches per inch, and a MD sewing machine only if at least 4-inches of free running, serviceable end from the attachment point on the container is available to facilitate overlap.

- c. Cut an appropriate length of Type VII nylon webbing (2) to splice or replace the leg strap entirely.
- d. Place plastic side release (1) onto strap as on original construction using new, or serviceable hardware items salvaged as applicable.
- e. Turn running end under 1-inch twice and secure with box stitch using size FF thread, 6 to 9 stitches per inch and a MD sewing machine.

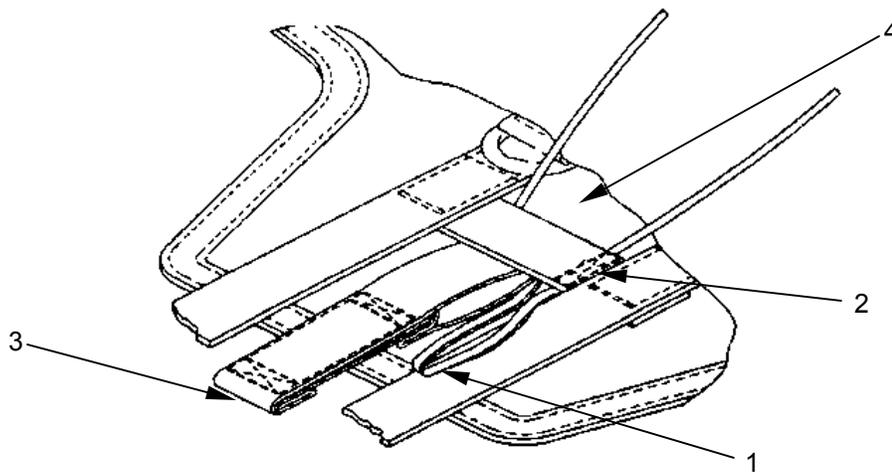

10. Leg Strap Release Assembly. To replace this assembly proceed as follows:

- a. Remove serviceable release (1) by cutting the webbing (2), and set aside.
- b. Fabricate new leg strap release assembly as described in WP 0053 00, using serviceable hardware items salvaged as applicable.

11. Release Assembly Handle. To replace this assembly proceed as follows:

- a. Remove stitching (2) that secures lanyard (1) to the container (4). Discard a damaged handle assembly (3).
- b. Fabricate a new release assembly handle (3) as described in WP 0053 00.
- c. Sew lanyard (1) to container as in original construction using size 3 thread, 5 to 8 stitches per inch and a MD sewing machine.

Container should be clean and dry. Place container on worktable.

INSPECT

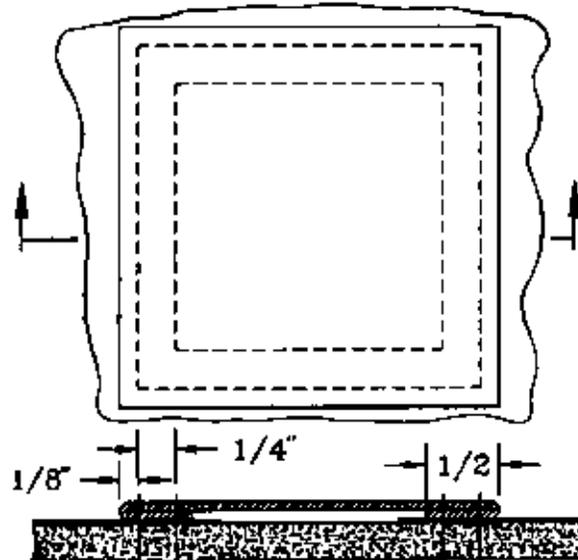

Perform a before and after technical/rigger type inspection of the Side Mount Container as outlined in WP 0008 00.

REPAIR

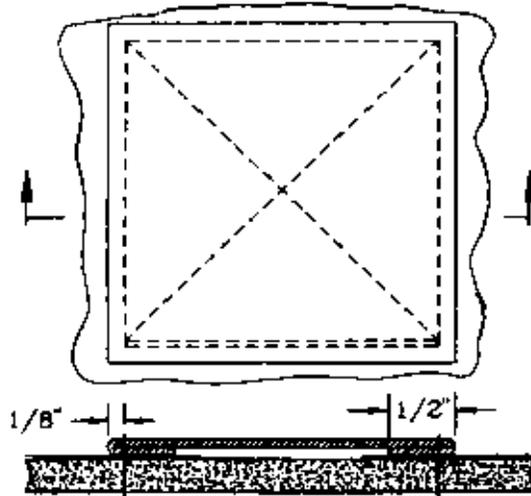

The nylon duck material of the container body may be restitched, darned, and patched. The polyester felt material may be restitched and plugged as described below.

1. Restitching. Restitch the container fabric directly over old stitching using stitching specifications outlined in the appropriate repair procedures. Lock stitching at least $\frac{1}{2}$ -inch.

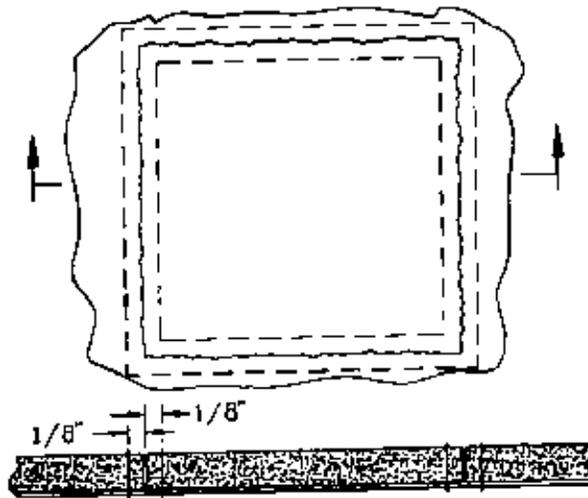

2. Darning. Darn a hole or tear in the container fabric that does not exceed 1-inch in length or diameter using size E thread and a darning machine. There is no limit to darns that may be applied, provided they do not weaken or reduce the original strength of the fabric more than 10%. If damage is in the lined portion of the container body and only the cotton duck is damaged, darn through duck and felt. If felt is also damaged, remove damaged area before darning duck fabric. Then plug felt as in 3. c) below.
3. Patching. There is no limit to the number of times the container body may be patched. Patch a hole or tear that exceeds 1-inch in length or diameter following procedures in a or b below. Use nylon duck cloth according to original construction for patching outside, and $\frac{1}{4}$ -inch thick felt for plugging inside lining. Use a HD sewing machine, size 3 thread, and 5 to 8 stitches per inch.
 - a. To patch a lined portion of the container when the felt is not damaged, cut nylon duck patch 2-inches beyond circumference of damaged portion. Turn under edges of patch $\frac{1}{2}$ -inch and center patch over damaged area. Sew patch to container with a double row of stitching as shown.

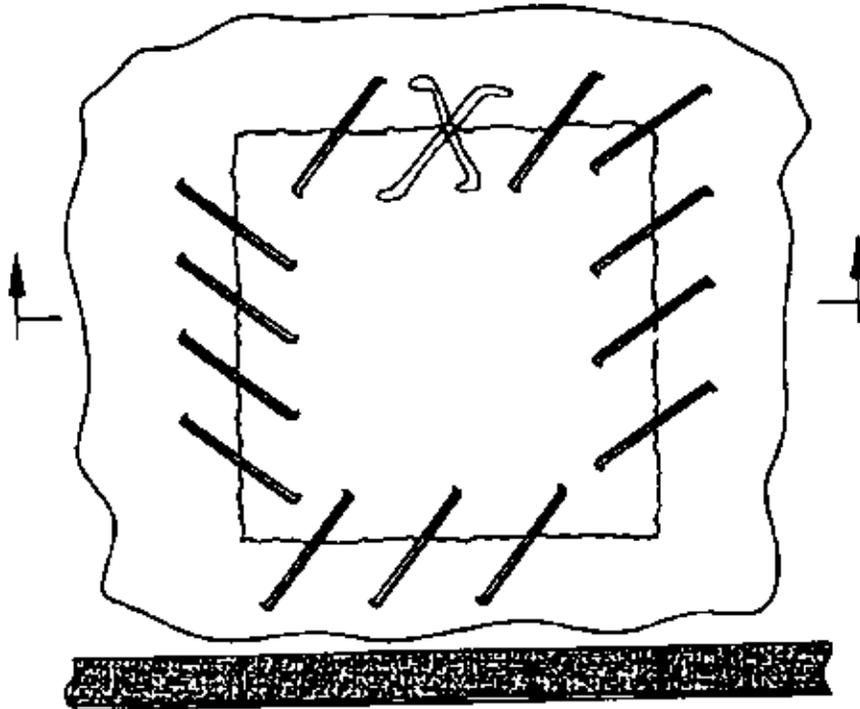

- b. To patch a lined portion of the container when the felt is damaged, remove the damaged felt as described in c) below. Cut a piece of felt the same size as the piece removed, and position felt plug and cotton duck patch (with edges turned under $\frac{1}{2}$ -inch) over damaged area. Sew a single box X stitch formation as shown.

- c. To plug the felt lining of container, mark a rectangle around the damaged area. Remove the damaged felt while being careful not to damage the nylon duck material. Cut a piece of felt the size of the piece removed. Position felt plug into area cleared and sew as shown.

- d. If damage is in an area that cannot be sewed by machine, tack felt plug securely to nylon duck as shown using doubled and waxed size 3 nylon thread. Secure thread ends with suitable knot.

4. Repair of Binding Tape. Overlap the binding tape, extending the new tape at least 1-inch beyond the damaged tape. Stitch tape with two rows of stitching $\frac{1}{8}$ and $\frac{1}{4}$ -inches from edge of tape as in original construction using size FF thread, 6 to 9 stitches per inch and a HD sewing machine.
5. Repairing Webbing. The webbing on the pack may be restitched or darned (do not darn the attaching web). Restitch loose, broken, or defective stitching according to original construction details and as outlined in the appropriate repair procedures. Darn as in original construction.

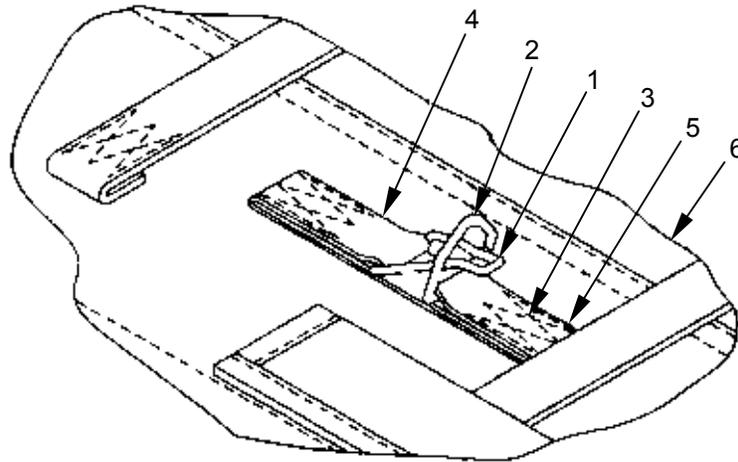

REPLACE

Replacing Webbing. Webbing components in (1) through (8) below may be replaced. Replacement will be accomplished in accordance with the original construction and as prescribed herein. Sear all cut ends of webbing before assembling webbing on pack.

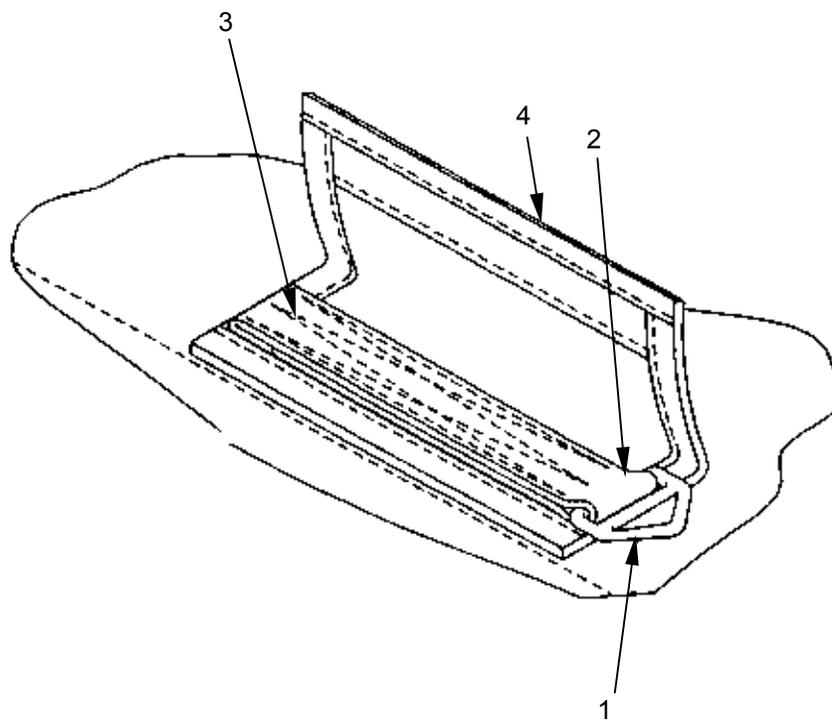

NOTE

Splicing and darning of the attaching strap assembly is not authorized.

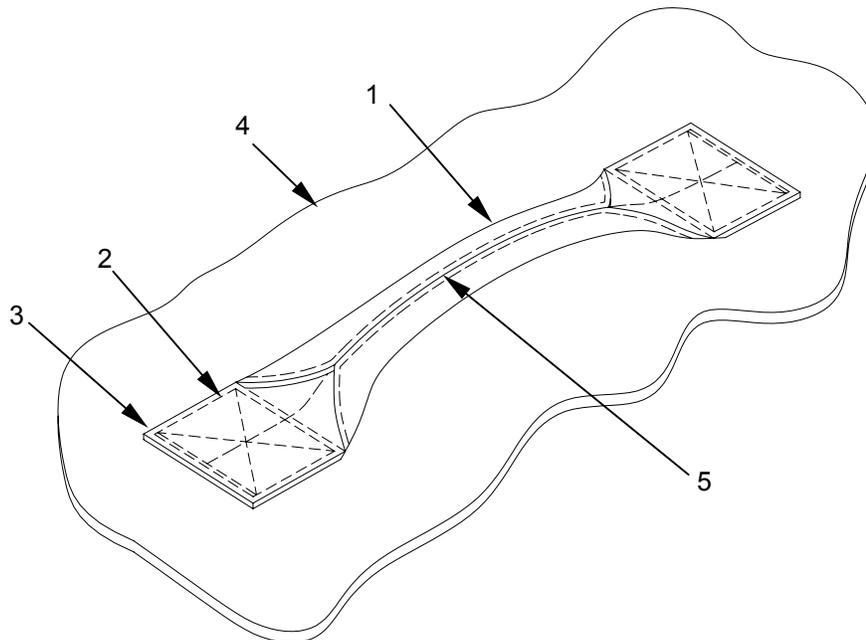

1. Quick Release Link and V-Ring Chape Assembly. To replace this assembly proceed as follows:
 - a. Cut webbing to remove serviceable quick release link (1) and V-Ring (2).
 - b. Cut stitching (3) that holds chapes (4) and (5) to container.
 - c. Cut 25 1/2-inch length of Type VII nylon webbing and sear both ends.
 - d. Thread quick release link (1) onto one end of nylon webbing. Fold back end to form 4 1/2-inch chape (4). Place on container (6) as in original construction and sew as shown using size 5 thread, 4 to 6 stitches per inch and a HD sewing machine.
 - e. Thread V-Ring (2) onto other end of webbing. Fold end back to form 3 1/2-inch chape (5). Sew as V-Ring chape.

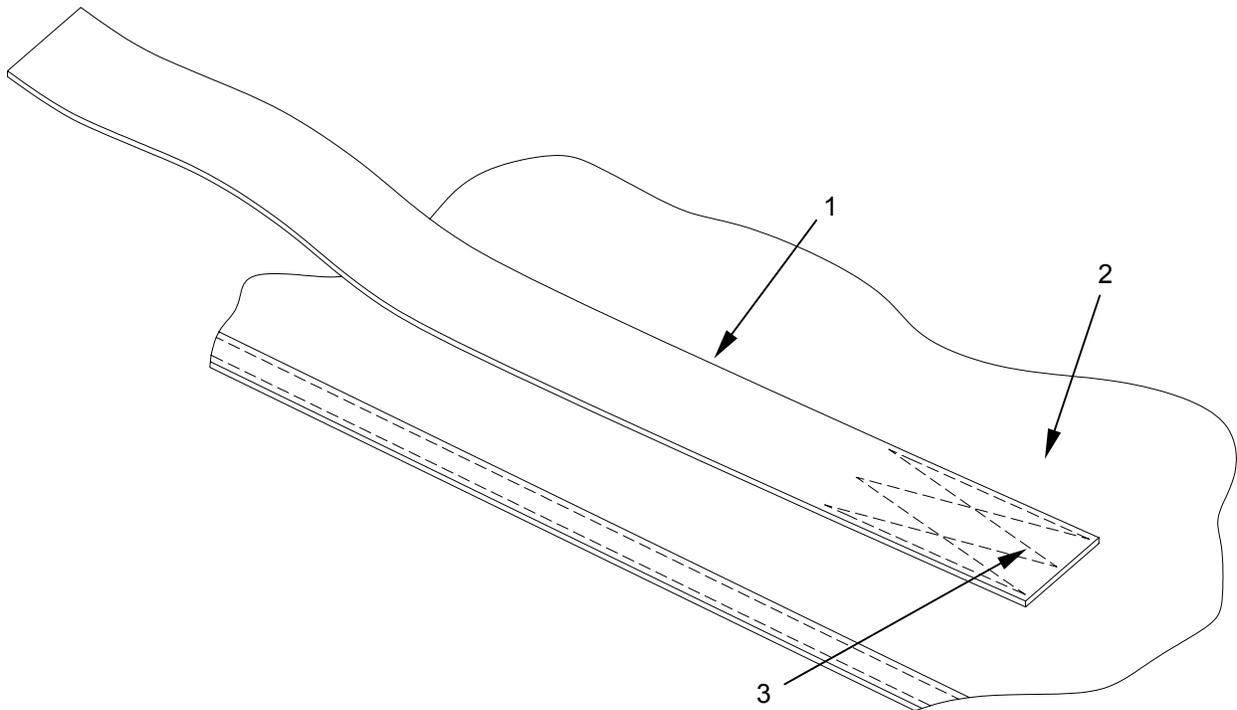

2. Flap Assembly V-Ring Harness. To replace the V-Ring (1) and webbing (2) proceed as follows:
 - a. Cut stitching (3) holding type VII webbing (2) to flap assembly (4). Remove V-Ring (1) from damaged webbing (2) and retain if serviceable.
 - b. Cut a 19-inch length of type VII nylon webbing (2) and sear both ends. Thread serviceable V-Ring (1) onto webbing (2). Fold as shown and place on flap assembly (4) as in original construction.
 - c. Sew as shown using size 5 thread, 4 to 6 stitches per inch and a HD sewing machine.

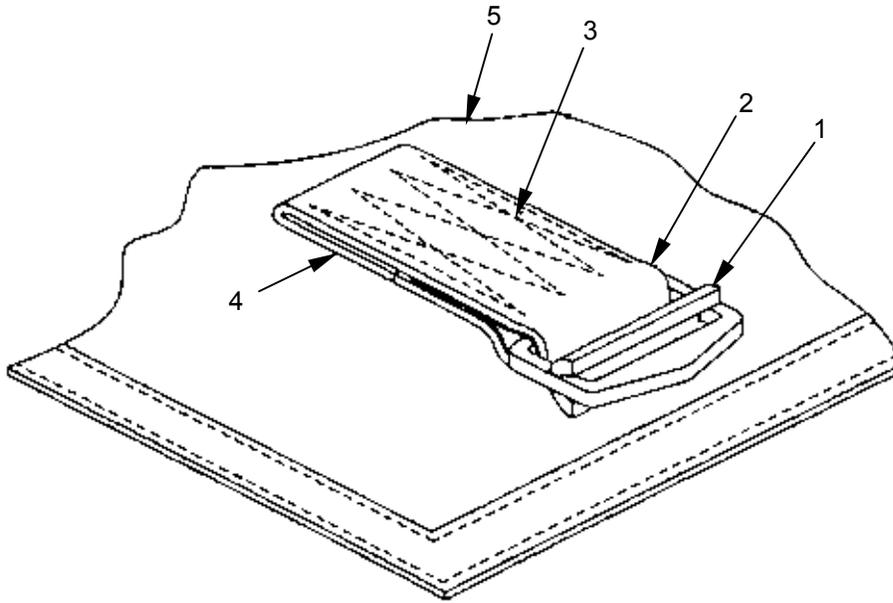

3. Carrying Handle Strap. To replace this strap **(1)** proceed as follows:
 - a. Cut stitching **(2)** that holds webbing **(3)** to container **(4)**.
 - b. Cut 8-inch length of Type VIII nylon webbing **(3)** and sear ends. Fold center 5-inches as shown **(5)** to form handle and place on container **(4)** as in original construction.
 - c. Sew handle strap to container with box X stitch using size 3 thread, 5 to 8 stitches per inch and a MD sewing machine.

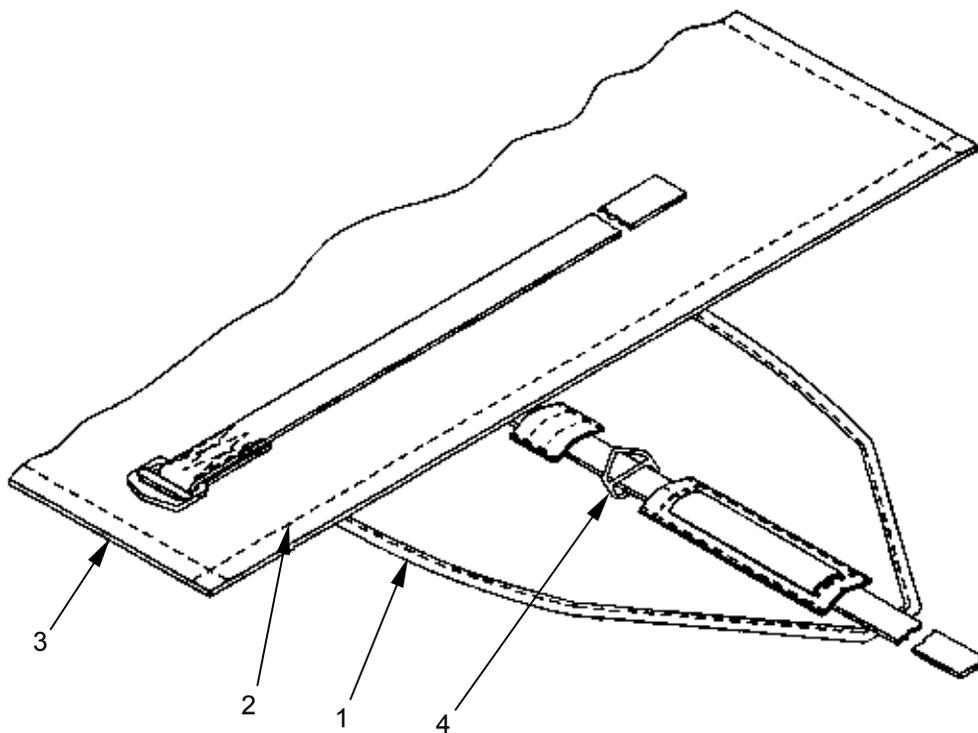

4. Side Securing Straps (Running Ends). To replace these straps **(1)** proceed as follows:
 - a. Cut strap **(1)** along stitching **(3)** that secures strap to container **(2)**.
 - b. Cut a length of Type VIII nylon webbing equal to the length removed.
 - c. Position replacement strap in original location on the container **(2)**. Stitch with 3 point WW pattern as shown using size FF thread, 6 to 9 stitches per inch and a MD sewing machine.

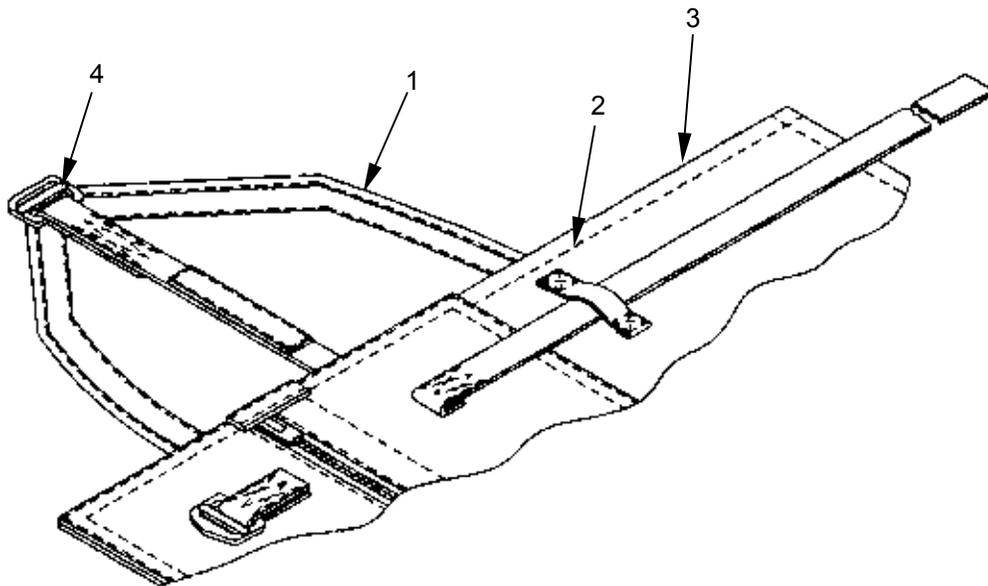

5. Side Securing Strap Quick Fit Adapters. To replace these straps proceed as follows:
 - a. Remove serviceable quick fit adapters **(1)** from webbing **(2)** by cutting the 3 point WW stitch pattern **(3)** and set aside.
 - b. Cut 7-inch length of Type VIII nylon webbing, and fold so ends meet 1-inch under **(4)**.
 - c. Place on container **(5)** as in original construction and stitch with 3 point WW pattern using size 3 thread, 5 to 8 stitches per inch and a MD sewing machine.

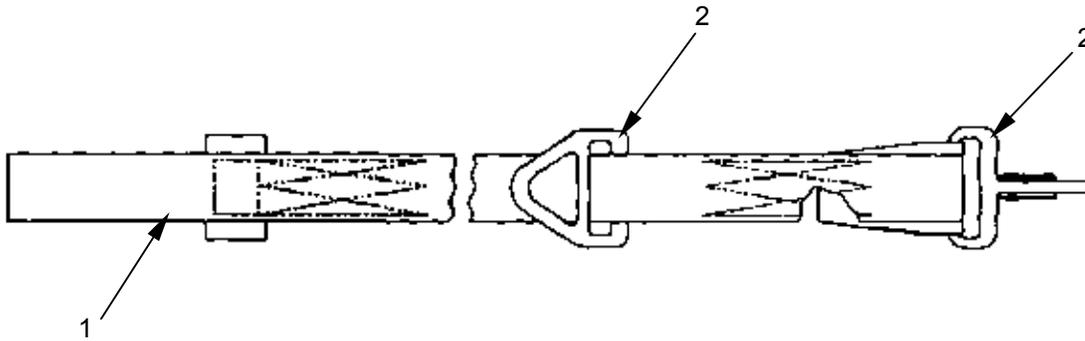

6. Upper Cap Assembly. To replace this assembly (1) proceed as follows:
 - a. Cut stitching (2) that secures cap assembly to container (3).
 - b. Remove serviceable hardware (4) by cutting the webbing and set aside.
 - c. Fabricate a new cap assembly as described in WP 0053 00.
 - d. Place new cap assembly onto container as in original construction using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine.

7. Lower Cap Assembly. To replace this assembly (1) proceed as follows:
 - a. Cut stitching (2) that secures cap assembly to container (3).
 - b. Remove serviceable hardware (4) by cutting the webbing and set aside.
 - c. Fabricate a new cap assembly as described in WP 0053 00.
 - d. Place new cap assembly onto container as in original construction using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine.

8. Bridle Assembly. To replace this assembly (1) proceed as follows:
 - a. Remove serviceable hardware (2) by cutting the webbing and setting the items aside.
 - b. Fabricate a new bridle assembly as described in WP 0053 00, using serviceable hardware salvaged, if appropriate.

INSPECT

Perform a before and after technical/rigger type inspection of the Parachute Drop Bag (PDB) as outlined in WP 0008 00.

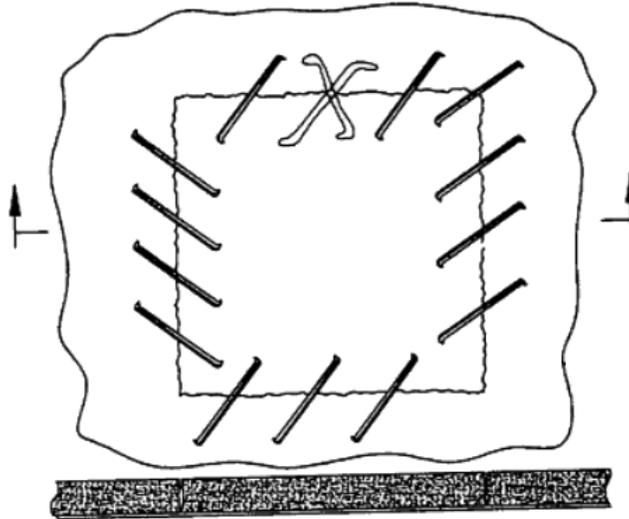

REPAIR

The PDB nylon fabric on the main compartment, to include cargo pockets, lowering line stow pocket, incorporated leg strap retainer and retainer flap, incorporated single point release assembly, and exterior and interior shoulder straps may be restitched, darned and patched. When making any of these repairs, remove stitching as necessary to gain access to the damaged area. After repairs have been made, replace any stitching that has been removed, as in the original construction or as specified in each procedure. Repair by restitching, darning, and patching as described below.

1. Restitching. Restitch the main compartment fabric directly over old stitching using size E thread, 6 to 9 stitches per inch, and a MD sewing machine. Lock stitching at least $\frac{1}{2}$ -inch. Restitch loose or broken stitching on the body of the main compartment, outer binding tape, Lowering line stow pocket, incorporated leg strap retainer and retainer flap, YKK zipper, and canteen pockets.
2. Darning. Darn a hole or tear in the main compartment fabric, canteen pockets, or single point release assembly cover that does not exceed 1-inch in length or diameter using size FF thread and a darning machine. There is no limit to darns that may be applied, provided they do not weaken or reduce the strength of the fabric more than 10%.
3. Patching. There is no limit to the number of times the main compartment may be patched. Patch a hole or tear that exceeds 1-inch in diameter following the procedures in a) or b) below. Use cloth, duck, textured nylon, Class III on the exterior and dyed dark gray Cordura nylon, 9.0 oz on the interior according to the original construction for patching. Use a MD sewing machine, size FF thread, and 6 to 9 stitches per inch.
 - a. To patch the main compartment cut the Nylon patch 2-inches beyond circumference of the damaged portion. Turn under edges of patch $\frac{1}{2}$ -inch and center patch over the damaged area. Sew to the main compartment with a double row of stitching.
 - b. To patch a lined portion of the main compartment, (exterior and interior shoulder straps) when the felt is not damaged, cut the nylon fabric patch two inches beyond circumference of damaged portion. Turn under edges of the patch $\frac{1}{2}$ -inch and center patch over damaged area. Sew patch to exterior and interior shoulder straps with a double row of stitching as shown.

- c. To patch-lined portion of the shoulder straps when the felt is damaged, remove the damaged felt as described in (d) below. Cut a piece of felt the same size as the piece removed, and position felt plug and cordura patch (with the edges turned under 1/2-inch) over the damaged area. Sew a single box stitch formation as shown.

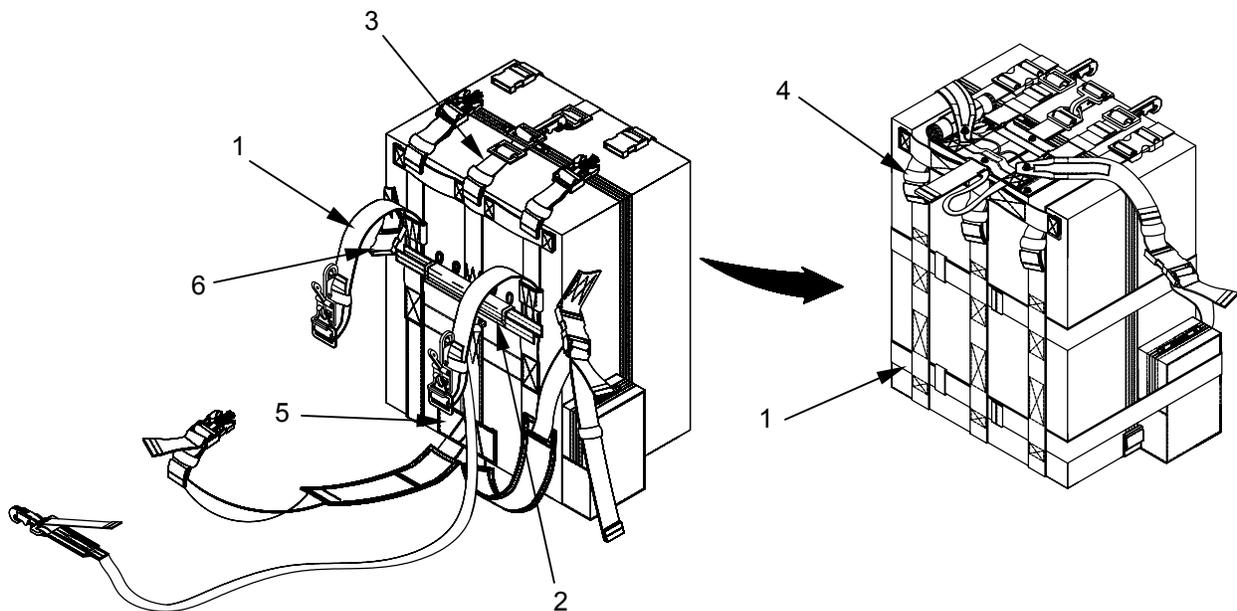

- d. To plug the felt lining of the container, mark a rectangle around the damaged area. Remove the damaged felt being careful not to damage the nylon material. Cut a piece of felt the size of the piece removed. Position felt plug into area cleared and sew as shown.
4. Repair of binding tape. Overlap the binding tape extending the new tape at least 1-inch beyond the damaged tape. Stitch tape with two rows of stitching $\frac{1}{8}$ -inch and $\frac{1}{4}$ -inch from edge of the tape as in the original construction using size E thread, 7 to 11 stitches per inch and a MD sewing machine.
 5. Repairing Webbing **(1)**. If the webbing is inadvertently damaged when stitching is being removed, the webbing will be replaced or the PDB will need to be removed from service.
 - a. **General.** The webbing on the main compartment may be restitched or replaced if authorized in this manual. This includes, the vertical straps, shoulder strap reinforcement, bottom shoulder strap attaching point, bottom vertical strap loop, and shoulder straps.
 - b. **Restitching.** Restitch loose, broken or defective stitching according to original construction using size FF thread, 6 to 9 stitches per inch, if webbing is used as a lifting point use size 5 thread, 4 to 6 stitches per inch and a HD sewing machine. Lock stitching at least $\frac{1}{2}$ -inch.
 6. Repair lowering line stow pocket **(2)** by restitching. Use size FF thread, 6 to 9 stitches per inch, and a MD sewing machine. Locking stitching at least $\frac{1}{2}$ -inch.
 7. Repair incorporated leg strap stow pocket by restitching. Use FF thread, 6 to 9 stitches per inch, and a MD sewing machine. Locking stitching at least $\frac{1}{2}$ -inch.
 8. Repair vertical straps **(3)** and vertical strap keepers **(4)** by restitching. Use 5 thread for 301 stitching, 4 to 6 stitches per inch, for box X stitching use size 5 thread, 4 to 6 stitches per inch and a HD sewing machine.

NOTE

V stitching runs parallel to webbing edges.

9. Repair Shoulder strap reinforcement (5) by restitching using (a double-VV w/Box-Stitch formation) size 5 thread, 4 to 6 stitches per inch and a HD sewing machine.
10. Repair bottom shoulder strap attaching point (6) by using a double box X stitch formation using size 3 thread, 5 to 8 stitches per inch and a HD sewing machine.

REPLACE

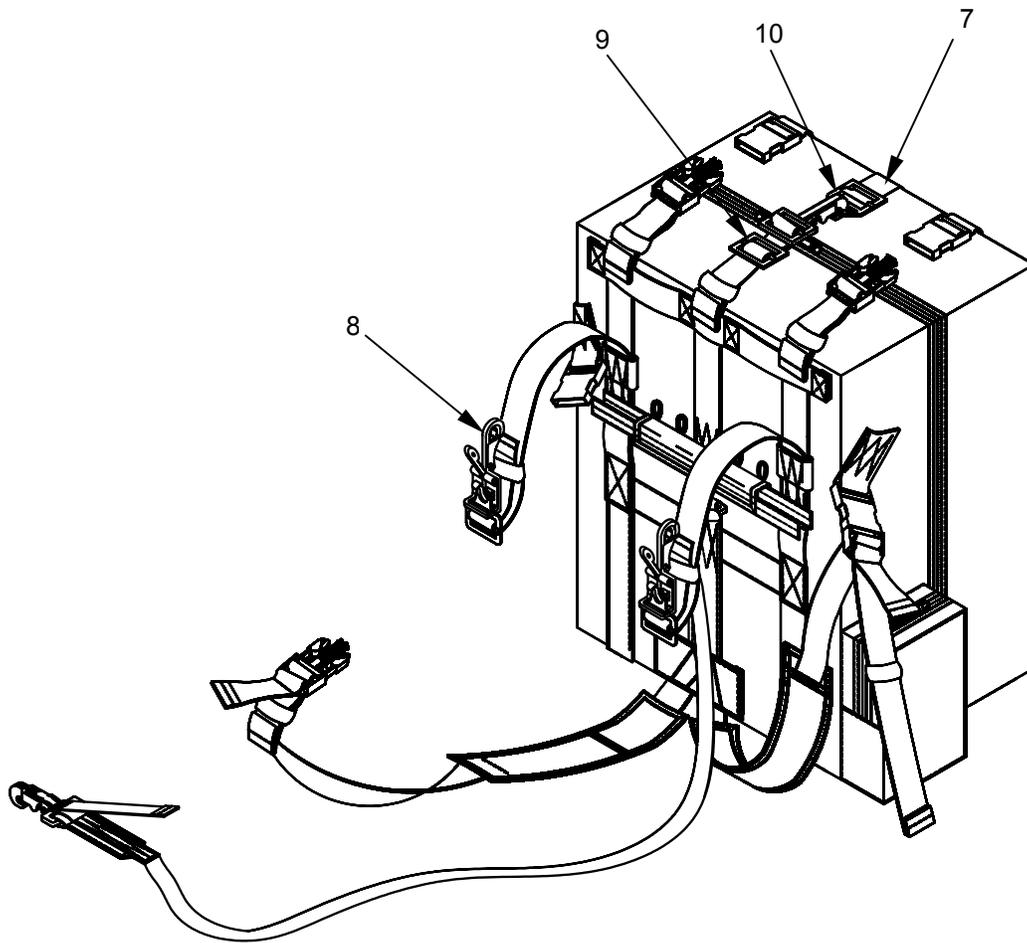

Only minor replacements will be authorized on the Parachutist Drop Bag (PDB), All major repairs will be sent back to manufacture unless authorized per the instruction in following paragraphs:

1. Vertical Straps Assembly, Center Vertical Strap and Restitch and Replace Metal Hardware.
 - a. Center vertical strap **(7)**, webbing, OD, nylon type XIII, if restitching sew using size 5 thread, 4 to 6 stitches per inch, and a MD sewing machine.
 - b. Replace damaged hardware, Ring, V-quick fit, Snap Hook **(8)**, Metal Slide **(9)**, with new metal hardware as in original construction.
 - (1) Replace damaged quick fit V-ring **(10)** by pulling the center vertical strap out from under the Single Point Release (SPR) cross strap, remove all access in center vertical strap and remove damaged quick fit v-ring and replace.
 - (2) Replace by grasping the center vertical strap at the point where it is sewn to the main compartment, trace the strap upwards toward the SPR assembly removing any twists, routing the center vertical strap up through the center of the quick fit v-ring. Ensure the fat portion of the quick fit v-ring is down and facing towards the bottom main compartment, and route back down through quick fit v-ring.
 - (3) Reroute center vertical strap under SPR assembly.
 - c. Replace damaged hardware, Snap Hook **(8)** or Metal Slide **(9)** with new metal hardware as in original construction.

NOTE

If replacing Metal Slide, remove and replace with serviceable hardware.

- (1) Carefully cut and remove the stitching at the folded end of the Center Vertical Strap. Pull the center vertical strap from metal slide, remove snap hook, and replace.
- (2) Replace by grasping the center vertical strap at the point where sewn and routed under the vertical strap loop (Webbing, OD, nylon type XIII).
- (3) Trace the center vertical strap upwards toward the SPR assembly, removing any twists. Route the center vertical strap through the snap hook as in original construction. Fold the end of the strap as in original construction and stitch using size 3 thread, 5 to 8 stitches per inch, and a HD sewing machine.

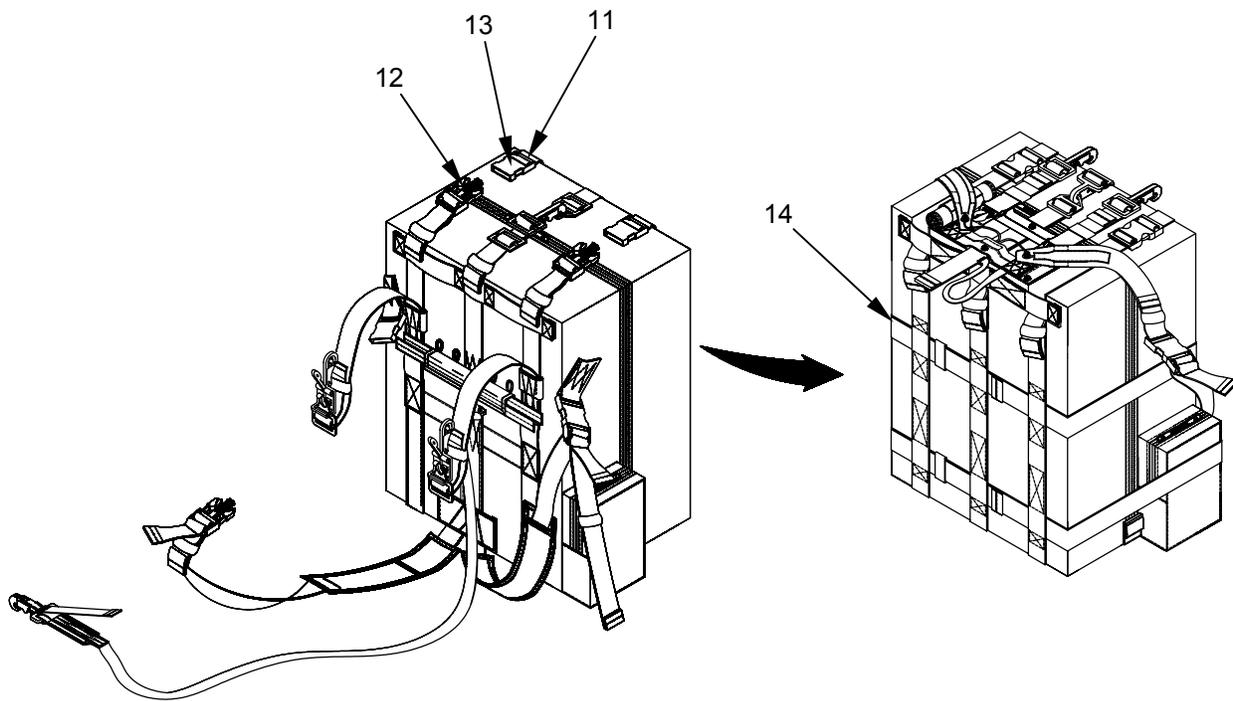

2. Outside Vertical Straps. Restitch and Replace Male and Female Quick Release Buckles.
 - a. Restitch Outside Vertical Strap **(11)**, webbing, OD, nylon seat belt material commercial grade, and restitch using size 5 thread, 4 to 6 stitches per inch and a MD sewing machine as in the original construction. Replace damaged Male quick release buckle **(12)**, or a female quick release buckle **(13)**. Replace with a serviceable quick release buckle as in original construction.
 - b. To replace damaged male quick release buckle **(12)**, or outside vertical strap **(11)**, remove all excess in the outside vertical strap and remove damaged male quick release buckle. Replace with a serviceable quick release buckle.
 - c. Replace by grasping the outside vertical strap at the point where sewn to the main compartment, trace the strap upwards toward the buckle assembly removing any twists, routing the outside vertical strap up through the buckle. Ensure the portion of the buckle with the lip is facing up as you route the strap through the bottom of the buckle and route back down through buckle.
 - d. To replace damaged, female quick release buckle **(13)**, or outside vertical strap, remove all excess in the outside vertical strap **(11)**, and remove damaged female buckle. Replace with a serviceable quick release buckle.
 - e. Replace by grasping the outside vertical strap **(11)** at the point where sewn to the main compartment, trace the strap upwards toward the buckle assembly removing any twists, routing the outside vertical strap up through the buckle. Ensure the portion of the buckle with the lip is facing up as you route the strap through the bottom of the buckle and route back down through buckle.
3. Compression Straps **(14)**. Webbing, OD, nylon seat belt material commercial grade, re-sew using size 5 thread, 4 to 6 stitches per inch and a MD sewing machine as in the original construction. The only authorized repairs will be to restitch or replace female and male quick release buckles. Replace compression strap as described below.

NOTE

No splicing of the compression strap is authorized.

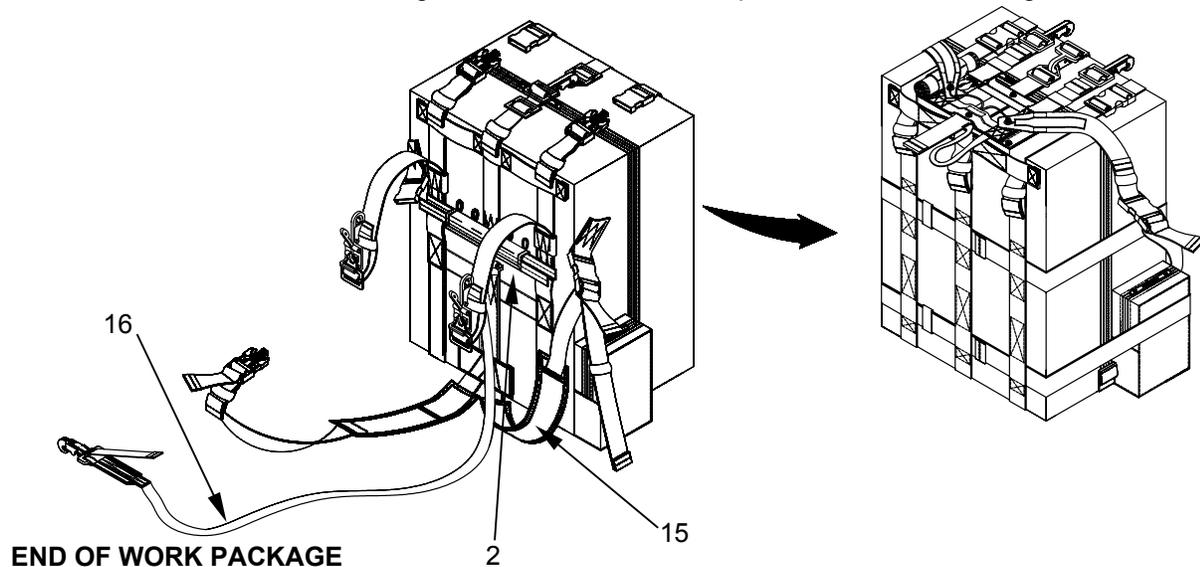

- a. Remove damaged compression strap **(14)** and replace with a new compression strap as in original construction. If restitching, use size FF thread, Box X, stitch formation 6 to 9 stitches per inch and a MD sewing machine.
- b. Remove and replace damaged compression strap, with a new strap as in original construction. Remove compression strap by pulling from one end and removing compression strap from vertical strap channel and discard.
- c. Replace compression strap by re-routing new strap through the vertical strap channels going from one side to the other as in original construction.
- d. If replacing damaged female quick release buckle, remove the compression strap from the main compartment and carefully cut and remove stitching at the folded end and box X, of the compression strap, that secures the damaged buckle.

- e. Remove damaged buckle and replace with a serviceable buckle and sew compression strap as in the original construction using size FF thread, 6 to 9 stitches per inch and a MD sewing machine.
- f. If replacing damaged male quick release buckle, replace by grasping compression strap and trace to the end ensuring all twists are taken out.
- g. Route the compression strap up through the buckle ensuring the portion of the buckle with the lip is facing up as you route the strap through the bottom of the buckle and route back down through buckle.

-
4. Breakaway Leg Strap **(15)**. Webbing, OD, nylon seat belt material commercial grade, re-sew using size 5 thread, 4 to 6 stitches per inch and a MD sewing machine as in the original construction. The only authorized maintenance on the breakaway leg strap is replacement or restitch as described below:
 - a. Replacement of the female quick release buckle is authorized for this item.
 - b. Restitching is authorized only to repair broken stitches. If the leg strap is cut it must be replaced with a new item from stock.
 - c. To replace damaged female buckle, take up excess in the leg strap and remove buckle. Replace with a serviceable buckle as in the original construction.
 - d. When placing a serviceable female buckle back onto the breakaway leg strap, make certain the cable guide, $\frac{1}{2}$ -inch OD nylon tape, is facing up.
 - e. Route the leg strap up through the female buckle; make certain that the lip on the female buckle is facing up.
 5. Lowering Line Assembly **(16)**. The only maintenance authorized on the lowering line assembly is restitching or replacement of hook and pile fastener.
 - a. When restitching broken stitching use size FF thread, 6 to 9 stitches per inch and a MD sewing machine on end loops. If repairing or replacing hook & pile tape fastener use size E thread, 7 to 11 stitches per inch and a LD sewing machine.
 - b. To replace hook and pile fastener on the lowering line proceed as follows:
 - (1) Cut the stitching and remove damaged hook or pile fastener from the lowering line.
 - (2) With pile side facing up, cut lengths as prescribed below. Replace both as in original construction; sew using E thread, 7 to 11 stitches per inch and a LD sewing machine.
 - (3) If replacing pile fastener on the topside looped end, cut 1-inch pile tape to a length of $11 \frac{1}{2}$ -inches.
 - (4) If replacing pile fastener on the snap hook side cut 1-inch pile tape to length of $2 \frac{1}{2}$ -inches. Replace both as in original construction; sew using E thread, 7 to 11 stitches per inch and a LD sewing machine.

- c. To replace hook fastener proceed as follows:
- (1) Cut the stitching and remove damaged hook fastener from the lowering line.
 - (2) With hook side facing up, cut the lengths as prescribed below. Replace as in original construction, sew using size E thread, 7 to 11 stitches per inch and a LD sewing machine.
 - (3) If replacing hook fastener on the looped end, cut 1-inch hook tape to a length of 2-inches.
 - (4) If replacing hook fastener on the snap hook end, cut 1-inch hook tape to a length of 2 1/2-inches.
- d. To replace hook and pile fastener on the lowering line stow pocket (2) proceed as follows:
- (1) To repair or replace hook & pile fastener, use size E thread, 7 to 11 stitches per inch and a LD sewing machine.
 - (2) Cut the stitching and remove damaged hook or pile fastener from the lowering line stow pocket. Lowering line stow pocket opened.
 - (3) To replace the hook fastener, cut a piece of 1-inch hook fastener to length of 13 1/2-inches and place on the pocket as in the original construction, sew using E thread, 7 to 11 stitches per inch and a LD sewing machine.
 - (4) To replace the pile fastener, cut a piece of 1-inch pile fastener to a length of 13 1/2-inches and place on to the pocket as in original construction, sew using E thread, 7 to 11 stitches per inch and a LD sewing machine.
 - (5) To replace the pile fastener on the outside flap, with the lowering line stow pocket closed, cut a piece of 2-inch pile fastener to a length of 8 1/2-inches and place onto pocket as in original construction, sew using E thread, 7 to 11 stitches per inch and a LD sewing machine.

STORAGE CRITERIA

Administrative storage of Ancillary Equipment for Personnel Parachute System will be accomplished in accordance with AR 750-1, and the instructions furnished below.

GENERAL STORAGE REQUIREMENTS

To ensure that serviceability standards of the stored items are maintained, every effort will be exerted to adhere to the following general storage requirements:

1. When available, a heated building should be used to store equipment.
2. Ancillary Equipment will be stored in a dry, well-ventilated location and protected from pilferage, dampness, fire, dirt, insects, rodents, and direct sunlight.
3. Equipment will not be stored in a manner which would prevent ventilation or interfere with light fixtures, heating vents, fire fighting devices, cooling units, exits, or fire doors.
4. Equipment will not be stored in a damaged, dirty, or damp condition.
5. All stored items will be marked, segregated, and located for accessibility and easy identification.
6. Equipment will not be stored in direct contact with any building floor or wall. Storage will be accomplished using bins, shelves, pallets, racks, or dunnage to provide airspace between the storage area floor and the equipment. If the pre-constructed shelving or similar storage accommodations are not available, locally fabricate storage provisions using suitable lumber or wooden boxes.
7. All available material handling equipment should be used as much as possible in the handling of Ancillary Equipment.
8. Periodic rotation of stock, conversion of available space, proper housekeeping policies, and strict adherence to all safety regulations will be practiced at all times.

STORAGE SPECIFICS FOR ANCILLARY EQUIPMENT FOR PERSONNEL PARACHUTE SYSTEM

In addition to the storage requirements stipulated in the general storage requirements paragraph, above, the following is a list of specifics that must be enforced when storing ancillary equipment:

1. Equipment will be secured from access by unauthorized personnel.

2. Equipment that is in storage, and is administered a cyclic inspection, will not be exposed to incandescent light or indirect sunlight for a period of more than 36-hours. In addition, exposure to direct sunlight will be avoided entirely.

IN-STORAGE INSPECTION

General Information. An in-storage inspection is a physical check conducted on a random sample of airdrop equipment that is located in storage. Authorized rigger personnel (MOS 92R(20)) will conduct this inspection.

Intervals. Equipment in storage will be inspected at least semiannually and at more frequent intervals if prescribed by the local parachute maintenance officer.

Inspection. Inspect to ensure that the equipment is ready for issue.

1. Check the items for proper identification.
2. Check that no damage or deterioration has been incurred.
3. Ensure that all modifications, or similar requirements, have been completed.
4. Check the adequacy of the storage facilities, efforts taken to control pests and rodents, and protection against unfavorable climatic conditions.

SHIPMENT

Initial Shipment. The initial packaging and shipping of ancillary equipment is the responsibility of item manufacturers, who are required to comply with federal and military packing specifications, as stipulated in contractual agreements. Equipment are normally shipped to depot activities, by domestic freight or parcel post, and packed to comply with overseas shipping requirements. Except for those items that are unpackaged and subjected to random inspections or testing by depot activity, equipment received by a using unit will be contained in the original packaging materials.

Shipping Between Maintenance Activities. The shipping of equipment between activities will be accomplished on a signature verification basis using whatever means of military transportation is available. Used equipment and other fabric items will be tagged in accordance with DA PAM 738-751, and rolled, folded, or placed loosely in a suitable container, as required. Unused equipment will be transported in original shipping containers. During shipment, every effort will be made to protect equipment from weather elements, dust, dirt, oil, grease, and acids. Military vehicles used to transport equipment will be inspected to ensure the items are protected from the previously cited material damaging conditions.

Other Shipping Instructions. Equipment destined for domestic or overseas shipment will be packaged and marked in accordance with AR 700-15, TM 38-230-1, and TM 38-230-2. Shipment of equipment will be accomplished in accordance with TM 10-1670-201-23.

**UNIT MAINTENANCE
ANCILLARY MILITARY FREE-FALL EQUIPMENT
MAINTENANCE ALLOCATION CHART, INTRODUCTION**

INTRODUCTION

The Army Maintenance System MAC

This introduction provides a general explanation of all maintenance and repair functions authorized at various maintenance levels under the standard Army Maintenance System concept.

The MAC (immediately following the introduction) designates overall authority and responsibility for the performance of maintenance functions on the identified end item or component. The application of the maintenance functions to the end item or component shall be consistent with the capacities and capabilities of the designated maintenance levels, which are shown on the MAC in column (4) as:

Unit - includes two subcolumns, C (operator/crew) and O (unit) maintenance

Direct Support - includes an F subcolumn

General Support - includes an H subcolumn

Depot - includes a D subcolumn

The tools and test equipment requirements (immediately following the MAC) list the tools and test equipment (both special tools and common tool sets) required for each maintenance function as referenced from the MAC.

The remarks (immediately following the tools and test equipment requirements) contain supplemental instructions and explanatory notes for a particular maintenance function.

Maintenance Functions

Maintenance functions are limited to and defined as follows:

1. **Inspect.** To determine the serviceability of an item by comparing its physical, mechanical, and/or electrical characteristics with established standards through examination (e.g., by sight, sound, or feel). This includes scheduled inspection and gagings and evaluation of cannon tubes.
2. **Test.** To verify serviceability by measuring the mechanical, pneumatic, hydraulic, or electrical characteristics of an item and comparing those characteristics with prescribed standards on a scheduled basis, i.e., load testing of lift devices and hydrostatic testing of pressure hoses.
3. **Service.** Operations required periodically to keep an item in proper operating condition, i.e. to clean (includes decontaminate, when required), to preserve, to drain, to paint, or to replenish fuel, lubricants, chemical fluids, or gases. This includes scheduled exercising and purging of recoil mechanisms.
4. **Adjust.** To maintain or regulate, within prescribed limits, by bringing into proper or exact position, or by setting the operating characteristics to specified parameters.
5. **Align.** To adjust specified variable elements of an item to bring about optimum or desired performance.

6. Calibrate. To determine and cause corrections to be made or to be adjusted on instruments of test, measuring, and diagnostic equipment used in precision measurement. Consists of comparisons of two instruments, one of which is a certified standard of known accuracy, to detect and adjust any discrepancy in the accuracy of the instrument being compared.
7. Remove/Install. To remove and install the same item when required to perform service or other maintenance functions. Install may be the act of emplacing, seating, or fixing into position a spare, repair part, or module (component or assembly) in a manner to allow the proper functioning of equipment or system.
8. Replace. To remove an unserviceable item and install a serviceable counterpart in its place. "Replace" is authorized by the MAC and assigned maintenance level is shown as the third position code of the Source, Maintenance, and Recoverability (SMR) code.
9. Repair. The application of maintenance services, including fault location/troubleshooting, removal/installation, and disassembly/assembly procedures, and maintenance actions to identify troubles, and restore serviceability to an item by correcting specific damage, fault, malfunction, or failure in a part, subassembly, module (component or assembly), end item, or system.

NOTE

The following definitions are applicable to the "repair" maintenance function:

Services - Inspect, test, service, adjust, align, calibrate, and/or replace.

Fault location/troubleshooting - The process of investigating and detecting the cause of equipment malfunctioning; the act of isolating a fault within a system or Unit Under Test (UUT).

Disassembly/assembly - The step-by-step breakdown (taking apart) of a spare/functional group coded item to the level of its least component, that is assigned an SMR code for the level of maintenance under consideration (i.e., identified as maintenance significant).

Actions - Welding, grinding, riveting, straightening, facing, machining, and/or resurfacing.

10. Overhaul. That maintenance effort (service/action) prescribed to restore an item to a completely serviceable/operational condition as required by maintenance standards in appropriate technical publications. Overhaul is normally the highest degree of maintenance performed by the Army. Overhaul does not normally return an item to like new condition.
11. Rebuild. Consists of those services/actions necessary for the restoration of unserviceable equipment to a like new condition in accordance with original manufacturing standards. Rebuild is the highest degree of material maintenance applied to Army equipment. The rebuild operation includes the act of returning to zero those age measurements (e.g., hours/miles, etc.) considered in classifying Army equipment/components.

Explanation of Columns in the MAC

Column (1) - Group Number. Column (1) lists FGC numbers, the purpose of which is to identify maintenance significant components, assemblies, subassemblies, and modules with the Next Higher Assembly (NHA).

Column (2) - Component/Assembly. Column (2) contains the item names of components, assemblies, subassemblies, and modules for which maintenance is authorized.

Column (3) - Maintenance Function. Column (3) lists the functions to be performed on the item listed in Column (2). (For a detailed explanation of these functions, refer to "Maintenance Functions" outlined above.)

Column (4) - Maintenance Level. Column (4) specifies each level of maintenance authorized to perform each function listed in column (3), by indicating work time required (expressed as manhours in whole or decimals) in the appropriate subcolumn. This work time figure represents the active time required to perform that maintenance function at the indicated level of maintenance. If the number or complexity of the tasks within the listed maintenance function varies at different maintenance levels, appropriate work time figures are to be shown for each level. The work time figure represents the average time required to restore an item (assembly, subassembly, component, module, end item, or system) to a serviceable condition under typical field operating conditions. This time includes preparation time (including any necessary assembly/disassembly time), troubleshooting/fault location time, and quality assurance time in addition to the time required to perform the specific tasks identified for the maintenance functions authorized in the MAC. The symbol designations for the various maintenance levels are as follows:

- C -- Operator or crew
- O -- Unit Maintenance
- F -- Direct Support Maintenance
- L -- Specialized Repair Activity (SRA)
- D -- Depot Maintenance
- H -- General Support Maintenance

NOTE

The "L" maintenance level is not included in column (4) of the MAC. Functions to this level of maintenance are identified by a work time figure in the "H" column of column (4), and an associated reference code is used in the REMARKS column (6). This code is keyed to the remarks and the SRA complete repair application is explained there.

Column (5) - Tools and Equipment Reference Code. Column (5) specifies, by code, those common tool sets (not individual tools) common Test, Measurement and Diagnostic Equipment (TMDE), and special tools, special TMDE and special support equipment required to perform the designated function. Codes are keyed to the entries in the tools and test equipment table.

Column (6) - Remarks Code. When applicable, this column contains a letter code, in alphabetical order, which is keyed to the remarks table entries.

Explanation of Columns in the Tools and Test Equipment Requirements

Column (1) - Tool or Test Equipment Reference Code. The tool or test equipment reference code correlates with a code used in column (5) of the MAC.

Column (2) - Maintenance Level. The lowest level of maintenance authorized to use the tool or test equipment.

Column (3) - Nomenclature. Name or identification of the tool or test equipment.

Column (4) - National Stock Number (NSN). The NSN of the tool or test equipment.

Column (5) - Tool Number. The manufacturer's part number, model number, or type number.

Explanation of Columns in the Remarks

Column (1) - Remarks Code. The code recorded in Column (6) of the MAC.

Column (2) - Remarks. This column lists information pertinent to the maintenance function being performed as indicated in the MAC.

**UNIT AND DIRECT SUPPORT MAINTENANCE
ANCILLARY EQUIPMENT FOR PERSONNEL PARACHUTE SYSTEM
REPAIR PARTS AND SPECIAL TOOLS LIST INTRODUCTION**

SCOPE

This Repair Parts and Special Tools List (RPSTL) lists and authorizes spare and repair parts; special tools; special test, measurement and diagnostic equipment (TMDE); and other special support equipment required for performance of organizational, direct support and general support maintenance of the Ancillary Equipment for Personnel Parachute Systems. It authorizes the requisitioning, issue, and disposition of spares, repair parts, and special tools as indicated by the Source, Maintenance, and Recoverability (SMR) codes.

GENERAL

In addition to the Introduction Work Package, this RPSTL is divided into the following work packages:

1. Repair Parts List Work Packages. Work packages containing lists of spares and repair parts authorized by this RPSTL for use in the performance of maintenance. These work packages also include parts which must be removed for replacement of the authorized parts. Parts lists are composed of functional groups in ascending alphanumeric sequence, with the parts in each group listed in ascending figure and item number sequence. Bulk materials are listed by item name in FIG. BULK at the end of the work packages.
2. Special Tools List. (Not Applicable). No special tools are required to assemble the Ancillary Equipment. Common tools are normally listed in WP 0034 00 if they are required for maintenance procedures/tasks.
3. Cross-Reference Indexes Work Packages. There are 2 cross-reference indexes work packages in this RPSTL: (the National Stock Number (NSN) Index work package, and the Part Number (P/N) Index work package). The National Stock Number Index work package refers you to the figure and item number. The Part Number Index work package refers you to the figure and item number.

EXPLANATION OF COLUMNS IN THE REPAIR PARTS LIST AND SPECIAL TOOLS LIST WORK PACKAGES

ITEM NO. (Column (1)). Indicates the number used to identify items called out in the illustration.

SMR CODE (Column (2)). The Source, Maintenance, and Recoverability (SMR) code containing supply/requisitioning information, maintenance level authorization criteria and disposition instruction, as shown in the following breakout.

Source Code	Maintenance Code	Recoverability Code
---- XX ----	---- X ----	---- X ----
1st two Positions: How to get an item.	3rd Position: Who can install, replace or use the item.	4th Position: Who can do complete repair* on the item.
		5th Position: Who determines disposition action on unserviceable items.

* Complete Repair: Maintenance capacity, capability, and authority to perform all corrective maintenance tasks of the "Repair" function in a use/user environment in order to restore serviceability to a failed item.

Source Code. The source code tells you how to get an item needed for maintenance, repair, or overhaul of an end item/equipment. Explanation of source codes follow.

Source Code	Explanation
PA	Stock items; use the applicable NSN to request/requisition items with these source codes. They are authorized to the category indicated by the code entered in the third position of the SMR code.
PB	
PC**	
PD	
PE	
PF**	
PG	NOTE: Items coded PC are subject to deterioration.
KB	Items with these codes are not to be requested/requisitioned individually. They are part of a kit which is authorized to the maintenance level indicated in the 3rd position of the SMR code. The complete kit must be requisitioned and applied.
KD	
KF	
MO-(Made at Unit/ AVUM Level)	Items with these codes are not to be requested/requisitioned individually. They must be made from bulk material which is identified by the P/N in the DESCRIPTION AND USABLE ON CODE (UOC) column and listed in the bulk material group work package of the RPSTL. If the item is authorized to you by the 3rd position code of the SMR code, but the source code indicates it is made at a higher level, order the item from the higher level of maintenance.
MF-(Made at DS/ AVIM Level)	
MH-(Made at GS Level)	
ML-(Made at Spe- cialized Repair Act (SRA))	
MD-(Made at Depot)	
AO-(Assembled by Unit/AVUM Level)	Items with these codes are not to be requested/requisitioned individually. The parts that make up the assembled item must be requisitioned or fabricated and assembled at the level of maintenance indicated by the source code. If the third position code of the SMR code authorizes you to replace the item, but the source code indicates the item is assembled at a higher level, order the item from the higher level of maintenance.
AF-(Assembled by DS/AVIM Level)	
AH-(Assembled by GS level)	
AL-(Assembled by SRA)	
AD-(Assembled by Depot)	
XA	Do not requisition an "XA" coded item. Order its next higher assembly. (Also, refer to the NOTE below.)
XB	If an "XB" item is not available from salvage, order it using the CAGEC and part number given.
XC	Installation drawing, diagram, instruction sheet, field service drawing, that is identified by manufacturer's part number.
XD	Item is not stocked. Order an "XD" coded item through normal supply channels using the CAGEC and part number given, if no NSN is available.

NOTE

Cannibalization or controlled exchange, when authorized, may be used as a source of supply for items with the above source codes, except for those source coded "XA" or those aircraft support items restricted by requirements of AR 750-1.

Maintenance Code. Maintenance codes tell you the level(s) of maintenance authorized to use and repair support items. The maintenance codes are entered in the third and fourth positions of the SMR Code as follows:

Third Position. The maintenance code entered in the third position tells you the lowest maintenance level authorized to remove, replace, and use the support item. The maintenance code entered in the third position will indicate authorization to one of the following levels of maintenance.

Maintenance

Code	Application/Explanation
C	Crew or operator maintenance done within unit/AVUM maintenance.
O	Unit level/AVUM maintenance can remove, replace, and use the item.
F	Direct support/AVIM maintenance can remove, replace, and use the item.
H	General support maintenance can remove, replace, and use the item.
L	Specialized repair activity can remove, replace, and use the item.
D	Depot level can remove, replace, and use the item.

Fourth Position. The maintenance code entered in the fourth position tells whether or not the item is to be repaired and identifies the lowest maintenance level with the capability to do complete repair (i.e., perform all authorized repair functions).

NOTE

Some limited repair may be done on the item at a lower level of maintenance, if authorized by the Maintenance Allocation Chart (MAC) and SMR codes.

Maintenance Code

Code	Application/Explanation
O	Unit/AVUM is the lowest level that can do complete repair of the item.
F	Direct support/AVIM is the lowest level that can do complete repair of the item.
H	General support is the lowest level that can do complete repair of the item.
L	Specialized repair activity is the lowest level that can do complete repair of the item.

- D Depot is the lowest level that can do complete repair of the item.
- Z Nonrepairable. No repair is authorized.
- B No repair is authorized. No parts or special tools are authorized for the maintenance of a "B" coded item. However, the item may be reconditioned by adjusting, lubricating, etc., at the user level.

Recoverability Code. Recoverability codes are assigned to items to indicate the disposition action on unserviceable items. The recoverability code is entered in the fifth position of the SMR Code as follows:

Code	Application/Explanation
Z	Nonreparable item. When unserviceable, condemn and dispose of the item at the level of maintenance shown in 3rd position of SMR Code.
O	Reparable item. When uneconomically repairable, condemn and dispose of the item at organizational or aviation unit level.
F	Reparable item. When uneconomically repairable, condemn and dispose of the item at the direct support level.
H	Reparable item. When uneconomically repairable, condemn and dispose of the item at the general support level.
D	Reparable item. When beyond lower level repair capability, return to depot. Condemnation and disposal of item not authorized below depot level.
L	Reparable item. Condemnation and disposal not authorized below Specialized Repair Activity (SRA).
A	Item requires special handling or condemnation procedures because of specific reasons (such as precious metal content, high dollar value, critical material, or hazardous material). Refer to appropriate manuals/directives for specific instructions.

National Stock Number (NSN) (Column (3)). The NSN for the item is listed in this column.

CAGEC (Column (4)). The Commercial and Government Entity Code (CAGEC) is a 5-digit code which is used to identify the manufacturer, distributor, or Government agency/activity that supplies the item.

PART NUMBER (Column (5)). Indicates the primary number used by the manufacturer (individual company, firm, corporation, or Government activity), which controls the design and characteristics of the item by means of its engineering drawings, specifications, standards, and inspection requirements to identify an item or range of items.

NOTE

When you use an NSN to requisition an item, the item you receive may have a different P/N from the number listed.

DESCRIPTION and Usable On Code (UOC) (Column (6)). This column includes the following information:

1. The federal item name and, when required, a minimum description to identify the item.
2. P/Ns of bulk materials are referenced in this column in the line entry to be manufactured/fabricated.
3. Hardness Critical Item (HCI). A support item that provides the equipment with special protection from electromagnetic pulse (EMP) damage during a nuclear attack.
4. The statement "END OF FIGURE" appears just below the last item description in Column (6) for a given figure in both the repair parts list and special tools list work packages.

QTY (Column (7)). The QTY (quantity per figure) column indicates the quantity of the item used in the breakout shown on the illustration/figure, which is prepared for a functional group, subfunctional group, or an assembly. A "V" appearing in this column instead of quantity indicates that the quantity is a variable with each application.

EXPLANATION OF CROSS-REFERENCE INDEXES WORK PACKAGES FORMAT AND COLUMNS

National Stock Number (NSN) Index Work Package.

STOCK NUMBER Column. This column lists the NSN in National item identification number (NIIN) sequence. The NIIN consists of the last nine digits of the NSN, i.e.,

NSN
5305-01-574-1467
NIIN

When using this column to locate an item, ignore the first four digits of the NSN. Use the complete NSN (13 digits) when requisitioning by stock number.

FIG. Column. This column lists the number of the figure where the item is identified/located. The figures are in the repair parts list and special tools list work packages.

ITEM Column. The Item number identifies the item associated with the figure listed in the adjacent FIG. Column. This item is also identified by the NSN listed on the same line.

2. Part Number (P/N) Index Work Package. P/Ns in this index are listed in ascending alphanumeric sequence (i.e., vertical arrangement of letter and number combinations which place the first letter or digit of each group in order A through Z, followed by the numbers 0 through 9, and each following letter or digit in like order).

PART NUMBER Column. Indicates the P/N assigned to the item.

FIG. Column. This column lists the number of the figure where the item is identified/located in the repair parts list and special tools list work packages.

ITEM Column. The item number is the number assigned to the item as it appears in the figure referenced in adjacent figure number column.

SPECIAL INFORMATION

USABLE ON CODE (UOC). The usable on code appears in the lower left corner of the Description Column heading. Usable on codes are shown as "UOC: ..." in the Description Column (justified left) on the first line under the applicable item/nomenclature. Uncoded items are applicable to all models. Identification of the usable on codes used in this RPSTL are:

Code**Used On**

No usable on codes assigned for this end item.

Fabrication Instructions. Bulk materials required to manufacture items are listed in the bulk material functional group of this RPSTL. Part numbers for bulk material are also referenced in the Description Column of the line item entry for the item to be manufactured/fabricated. Detailed fabrication instructions for items source coded to be manufactured or fabricated are found in WP 0051 00, Illustrated List of Manufactured Items.

Detailed assembly instructions for items source coded to be assembled from component spare/repair parts are found in this manual. Items that make up the assembly are listed immediately following the assembled item entry.

Line item entries for repair part kits and sets appear as the last entries in the repair part listing for the figure in which their parts are listed as repair parts.

Index Numbers. Items which have the word BULK in the figure column will have an index number shown in the item number column. This index number is a cross-reference between the NSN / P/N index work packages and the bulk material list in the repair parts list work package.

Illustrations List. The illustrations in this RPSTL contain unit authorized items. Illustrations published in this technical manual contain unit authorized items that appear in this RPSTL. The tabular list in the repair parts list work package contains only those parts coded "O" in the third position of the SMR code, therefore, there may be a break in the item number sequence.

HOW TO LOCATE REPAIR PARTS

1. When NSNs or P/Ns Are Not known.

First. Using the table of contents, determine the assembly group to which the item belongs. This is necessary since figures are prepared for assembly groups and subassembly groups, and lists are divided into the same groups.

Second. Find the figure covering the functional group or subfunctional group to which the item belongs.

Third. Identify the item on the figure and note the number(s).

Fourth. Look in the repair parts list work packages for the figure and item numbers. The NSNs and part numbers are on the same line as the associated item numbers.

2. When NSN is Known.

First, if you have the NSN, look in the STOCK NUMBER column of the NSN index work package. The NSN is arranged in NIIN sequence. Note the figure and item number next to the NSN.

Second. Turn to the figure and locate the item number. Verify that the item is the one you are looking for.

3. When P/N is Known.

First. If you have the P/N and not the NSN, look in the PART NUMBER column of the P/N index work package. Identify the figure and item number.

Second. Look up the item on the figure in the applicable repair parts list work package.

**UNIT MAINTENANCE
ANCILLARY EQUIPMENT FOR PERSONNEL PARACHUTE SYSTEM
EXPENDABLE AND DURABLE ITEMS LIST**

EXPENDABLE AND DURABLE ITEMS LIST

This work package lists expendable and durable items that you will need to maintain the ancillary equipment. These items are authorized to you by CTA 50-790, Expendable/Durable Items (except medical, Class V repair parts, and heraldic items), or CTA 8-100, Army Medical Department Expendable/Durable Items.

Explanation of Columns in the Expendable/Durable Items List

Column (1), Item Number. This number is assigned to the entry in the listing and is referenced in the narrative instructions to identify the item.

Column (2), Level. This column identifies the lowest level of maintenance that requires the item.

Column (3), National Stock Number. This is the national stock number assigned to the item which you can use to requisition it.

Column (4), Item Name, Description, Commercial and Government Entity Code (CAGEC), and Part Number. This provides the other information you need to identify the item.

Column (5), Unit of Measure (U/M). This code shows the physical measurement or Count of an item, such as gallon, dozen, gross, etc.

EXPENDABLE AND DURABLE ITEMS LIST

Table 1. Expendable and Durable Items List.

(1) ITEM NUMBER	(2) LEVEL	(3) NATIONAL STOCK NUMBER	(4) ITEM NAME, DESCRIPTION, PART NUMBER, (CAGEC)	(5) U/M
1	O	9160-00-253-1171	Beeswax, Technical, 1-Lb, C-B-191, (81348)	LB
2	O	7920-00-282-2470	Brush, Scrub, Household, H-B-1490, (81348)	EA
3	O	7520-00-248-9285	Brush, Stenciling, H-B-00621, (81348)	EA
4	O	5350-00-221-0872	Cloth, Abrasive, Ferric Oxide and Quartz, P-C-458, (81348)	EA
5	O	8305-00-926-6870	Cloth, Cotton Duck, Type III, MIL-C-7219	YD
6	O	8305-00-170-9284	Cloth, duck, cotton, CG 483, 14.35 oz (81348) CCC-C-419	YD
7	O	8305-00-107-5834	Cloth, duck, cotton, color 07, MRWRT, 36-inch W, type I, No 6, (81348), CCC-C-419	YD
8	O		Cloth, duck, nylon, CG 483, C14, 8 oz, MIL-C-4373A	YD
9	O	8305-00-107-0079	Cloth, duck, nylon, CG483, 12.5 oz, MIL-C-43375	YD
10	O		Cloth, duck, nylon, Type II	YD
11	O	4020-00-262-2147	Cord, fibrous, nylon, type III, red Nr 70180, (81349) MIL-C-5040	YD
12	O	4020-00-246-0688	Cord, nylon, CG 483 core, type III, (81349) MIL-C-5040	YD
13	O	4020-00-262-2019	Cord, nylon, OD nylon core, type II	YD
14	O	4020-00-240-2146	Cord, nylon, NAT nylon core, type III	YD
15	O	7930-00-281-4731	Dishwashing compound, hand, flake, (81348) P-D-410	LB
16	O	Commercial	Dyed dark gray nylon, 9.0 oz	
17	O	8305-00-227-1247	Felt, 1/4-inch thick, gray, class 12R2, 92-inch long, (81348) 72-inch wide, C-F-206	SF
18	O	8305-00-290-5584	Felt, 1/4-inch, polyester, needle punched, MIL-F-44405	SF
19	O	8305-00-633-9844	Felt, 1-inch thick, 72-inch wide Type I, (81348), C-F-206	SF

Table 1. Expendable and Durable Items List.

(1) ITEM NUMBER	(2) LEVEL	(3) NATIONAL STOCK NUMBER	(4) ITEM NAME, DESCRIPTION, PART NUMBER, (CAGEC)	(5) U/M
20	O	5325-00-231-6589	Grommet, spur, Type III, (81349), MIL-G-16491	EA
21	O	7510-00-286-5362	Ink, marking, parachute, strata-blue, (81349), MIL-I-6903	PT
22	O	8330-00-299-8552	Leather, cattlehide, natural, (81348) KKL201	SF
23	O	9150-01-260-2534	Lubricant, Solid film (81349), MIL-L-2398	BX
24	O	9150-00-999-7548	Lubricant, stick form	BX
25	O	7520-00-230-2734	Mark, felt tip, black (81348) GG-M-00114	EA
26	O	7520-00-491-2917	Pen, ballpoint (81348) GG-B-60	EA
27	O	7920-00-205-3570	Rag, wiping, (81348) DDD-R-30	BL
28	O	4030-00-431-5538	Sleeve, swaging, wire cable, 5/32-inch W, (96906), MS51844-25	EA
29	O	9310-00-160-7858	Stencilboard, oiled, Type II, (81348) UU-S-265	SH
30	O	8315-00-616-0850	Tape, Binding, Nylon, Type III, 3/4-inches wide, MIL-T-5038	YD
31	O	8305-00-281-3012	Tape, Binding, Nylon, Type 12 (81349) MIL-W-4088	YD
32	O	8315-00-151-6481	Tape, fastener, Hook, 1-1/2-inch wide, CG 483	YD
33	O	8315-00-450-9837	Tape, fastener, hook, CG 483, 2-inch wide, (81349), MIL-F-21840	RL
34	O	8315-00-151-6480	Tape, fastener, hook, CG483, 1-inch wide, (81349) MIL-F-21840	RL
35	O	8315-00-151-6483	Tape, fastener, pile, CG 483, 1-1/2-inch wide, (81349), MIL-F-21840	RL
36	O	8315-00-151-6484	Tape, fastener, pile, CG 483, 1-inch wide, (58536), A-A-55126	RL
37	O	8315-00-151-6482	Tape, fastener, pile, CG 483, 2-inch wide, (58536), A-A-55126	RL
38	O	4020-00-753-6555	Tape, Lacing, and Tying	YD
39	O	8315-00-255-7673	Tape, nylon, Type III, CG 483, 1/2-inch W, (81349), MIL-T-5038	YD

Table 1. Expendable and Durable Items List.

(1) ITEM NUMBER	(2) LEVEL	(3) NATIONAL STOCK NUMBER	(4) ITEM NAME, DESCRIPTION, PART NUMBER, (CAGEC)	(5) U/M
40	O	7510-00-266-5016	Tape, pressure sensitive, 2-inch W, Type IV, (81348) PPP-T-60	RL
41	O	8315-00-253-6289	Tape, textile, cotton, 3/4-inch W, Type I, MIL-T-43566	YD
42	O	8315-00-253-6292	Tape, textile, cotton, 1-1/2-inch wide, CG 483, Type I, (81349), MIL-T-43566	YD
43	O	8315-00-253-6290	Tape, textile, cotton, 1-inch wide, CG 483, Type I, (81349), MIL-T-43566	YD
44	O	8315-00-260-2561	Tape, Textile, Cotton, type II, 1-inch wide, (81349), MIL-W-5665	YD
45	O	8305-00-261-8579	Tape, textile, webbing, Type IV, CG 483, MIL-T-5038	YD
46	O	8310-00-917-3945	Thread, cotton, ticket 8/7, natural, (58536), A-A-52094	RL
47	O	8310-00-267-3027	Thread, nylon, size 3, CG 483, (81348), V-T-295	RL
48	O	8310-00-262-2777	Thread, nylon, size 5, CG 483, (81348), V-T-295	RL
49	O	8310-00-262-2780	Thread, nylon, size 6, CG 483, (81348), V-T-295	RL
50	O	8310-00-262-2772	Thread, nylon, size E, CG 483, (81348), V-T-295	RL
51	O	8310-00-227-1244	Thread, nylon, size FF, CG 483, (81348), V-T-295	RL
52	O	8310-00-285-2044	Wax, paraffin, Type I, technical, grade A, (81348) VV-W-95	LB
53	O		Webbing, Absorb-edge, 24k breaking strength, gray, 4-inch wide	YD
54	O	8305-00-263-2462	Webbing, cotton, 1-inch wide, type III, (81349), MIL-W-530	YD
55	O	8305-00-260-2564	Webbing, cotton, Type VII, CG 483	YD
56	O	8305-00-260-2564	Webbing, cotton/nylon, Type VIII, CG 483, 1.75-inch wide, (81349), MIL-W-5665	YD
57	O	8305-00-263-3592	Webbing, nylon, 1-inch wide, Type II, (81349), MIL-W-4088	YD
58	O	8315-00-263-3604	Webbing, Nylon, 1-inch wide, Type III, CG 483	YD
59	O	8305-00-261-8856	Webbing, nylon, CG 483, Type I, 9/16-inch W (81349), MIL-W-4088	YD

**UNIT MAINTENANCE
ANCILLARY EQUIPMENT FOR PERSONNEL PARACHUTE SYSTEMS
ILLUSTRATED LIST OF MANUFACTURED ITEMS**

INTRODUCTION**Scope**

This work package includes complete instructions for making items authorized to be manufactured or fabricated at the unit maintenance level.

How to Use the Index of Manufactured Items

A part number index in alphanumeric order is provided for cross-referencing the part number of the item to be manufactured to the page which covers fabrication criteria.

Explanation of the Illustrations of Manufactured Items

All instructions needed by maintenance personnel to manufacture the item are included on the illustrations. All bulk materials needed for manufacture of an item are listed by part number or specification number in a tabular list on the illustration.

EQUIPMENT	PART NUMBER	NOMENCLATURE	FIG NO
Accessory Set, SCUBA	11-1-308-1	Strap, Support	2
	11-1-308-3	Harness, Backstrap	3
	11-1-308-4	Strap, Waistband Extension	4
Jump Pack Parachutist	11-1-2716	Pocket Assembly, Lowering Line	5
Harness Single Point Release	11-1-3009-3	Strap, Cross Adjustable	6
Pack, Assembly, AT4	11-1-3401	Pocket Assembly, Lowering Line	7
	11-1-3403	Forward End Cross Strap	8
Case, Parachutist's M-1950 (Nylon)	2-2-629	Pocket Assembly, Lowering	11
	2-2-629	Lower Strap Pocket Assembly	12
	2-2-632	Lower Leg Strap Assembly	13

EQUIPMENT	PART NUMBER	NOMENCLATURE	FIG NO
Parachutist's Weapons And Individual Equipment Pack and Harness Assembly	5-4-697-3-24	Upper Suspension Strap	14
	5-4-697-3-42	Pocket Assembly, Lowering	15
	5-4-697-3-15	Handle	16
Jump Pack Stinger Missile	11-1-3890-15	Strap, Carrying	17
Arctic Rigging Extension	N/A	Waistband, Modified	18
Container Front Mount	11-1-6832	Horizontal Restraint Assembly	19
		Vertical Restraint Assembly	20
		Closing Flap Assembly	21
		Lowering Line Pocket, Flaps and Loop	22
		Side Container Assembly	23
		Kit, Bag Assembly	24
		Bridle Assembly	25
		Attaching Strap	26
Release Handle Assembly	27		
Container Side Mount	11-1-6866	Upper Cap Assembly	28
		Lower Cap Assembly	29
		Lower Line Bridle Assembly	30

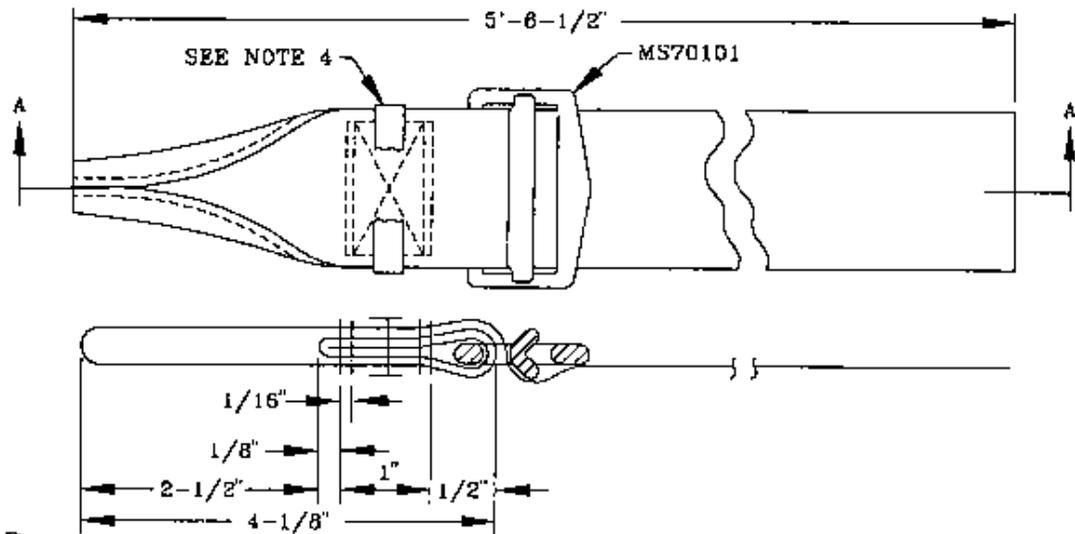

Fig. 2 (ACCESSORY SET, SCUBA) STRAP, SUPPORT

PROCEDURE	MATERIALS	NOTE
1. CUT 6-FT 4-IN LENGTH OF NYLON WEBBING.	WEBBING, NYLON, TYPE VIII, CLASS R, CG 483, MIL-W-27265	DIMENSIONS SHOWN ARE INCHES.
2. SEAR ONE END AS DESCRIBED IN WP 0013 00.	RUBBER BAND, TYPE I OR II	TOLERANCE IS 1/8-IN.
3. INSTALL QUICK FIT ADAPTER.	THREAD, NYLON, SIZE 3, TYPE I OR II, V-T-295	
4. FOLD AND SEW WEBBING AS SHOWN USING SIZE 3 THREAD 5 TO 8 STITCHES PER INCH AND A HD SEWING MACHINE.		
5. CUT OTHER END OF WEBBING TO LENGTH INDICATED AND SEAR END AS DESCRIBED IN WP 0013 00.		

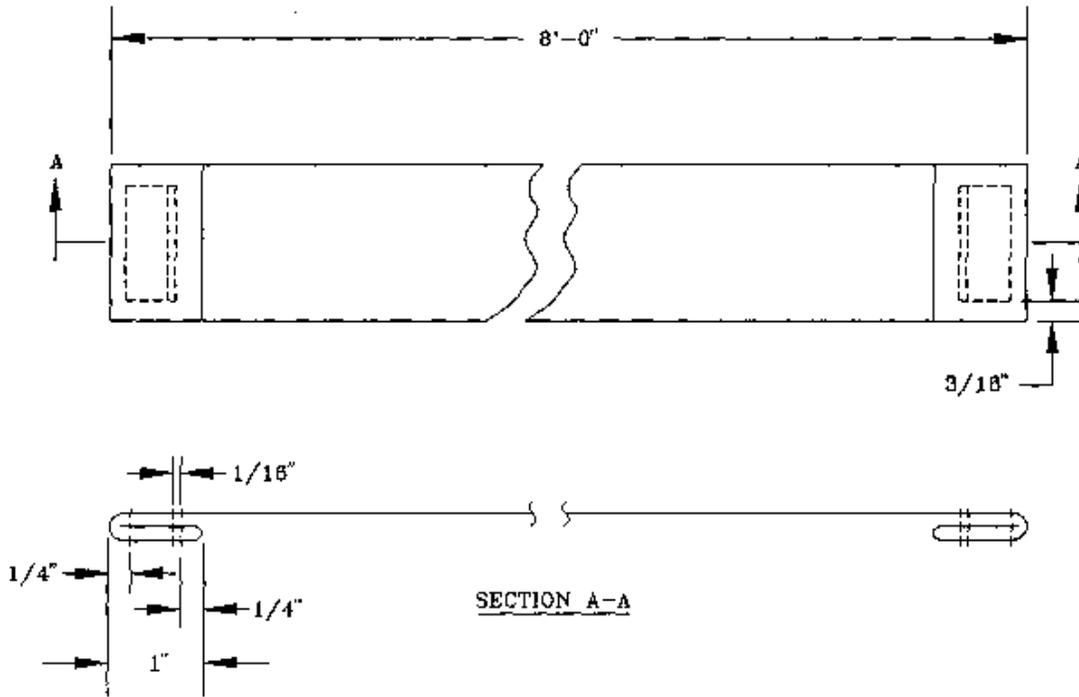

Fig. 3 (ACCESSORY SET, SCUBA) HARNESS, BACKSTRAP

PROCEDURE	MATERIALS	NOTE
1. CUT 8-FT 4-IN LENGTH OF WEBBING MATERIAL.	WEBBING, NYLON, TYPE VIII, CLASS R, CG 483, MIL-W-27265	DIMENSIONS SHOWN ARE IN INCHES.
2. SEAR ENDS AS DESCRIBED IN WP 0013 00.	THREAD, SIZE 6, OD, V-T-295	TOLERANCE IS 1/8-IN.
3. FOLD AS SHOWN AND SEW USING SIZE 6 THREAD, 5 TO 8 STITCHES PER INCH AND A HD SEWING MACHINE.		

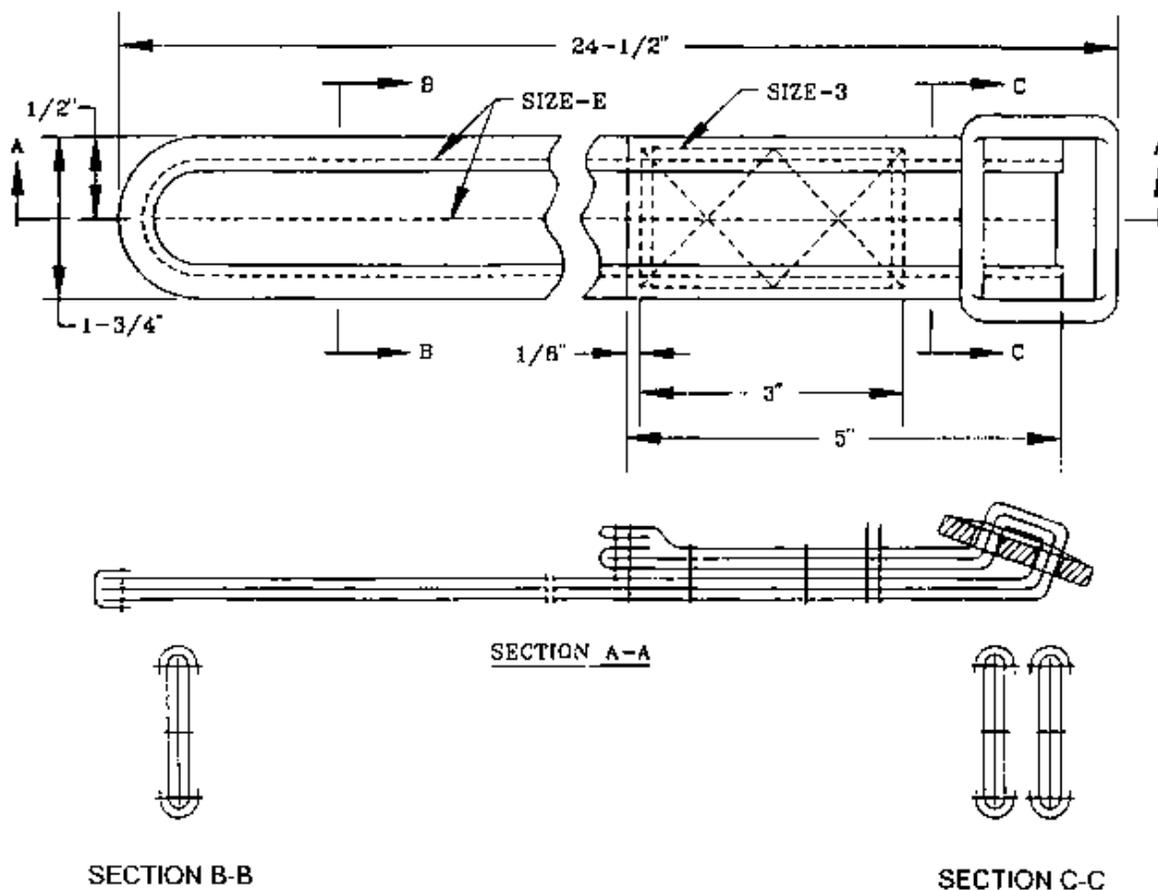

Fig. 4 (ACCESSORY SET, SCUBA) STRAP, WAISTBAND EXTENSION

PROCEDURE	MATERIALS	NOTE
1. CUT A 29-1/2-IN LENGTH OF WEBBING MATERIAL AND SEAR ENDS.	WEBBING, NYLON, OD, MIL-W-27265	DIMENSIONS SHOWN ARE IN INCHES.
2. CUT TWO 30-IN LENGTHS OF 1-3/4-IN WIDE NYLON CLOTH.	CLOTH, NYLON DUCK, TYPE III, MIL-C-7219	TOLERANCE IS 1/8-IN.
3. SANDWICH WEBBING BETWEEN NYLON CLOTH STRIPS AND SEW ALONG CENTER AS SHOWN USING SIZE E THREAD, 7 TO 11 STITCHES PER INCH AND A LD SEWING MACHINE.	THREAD, NYLON, SIZE 3, V-T-295 TAPE, BINDING, NYLON TYPE III, 3/4-IN WIDE, MIL-T-5038	
4. CUT ROUNDED END ON OTHER END OF ASSEMBLY AS SHOWN.	THREAD, NYLON, SIZE E, V-T-295	
5. TURN BINDING UNDER 1/2-IN AND SEW TO ASSEMBLY USING METHOD 3 ABOVE.		
6. INSTALL ADAPTER ON STRAP.		
7. FOLD STRAP AS SHOWN AND APPLY BOX X STITCH USING SIZE 3 THREAD, 5 TO 8 STITCHES PER INCH AND A HD SEWING MACHINE.		

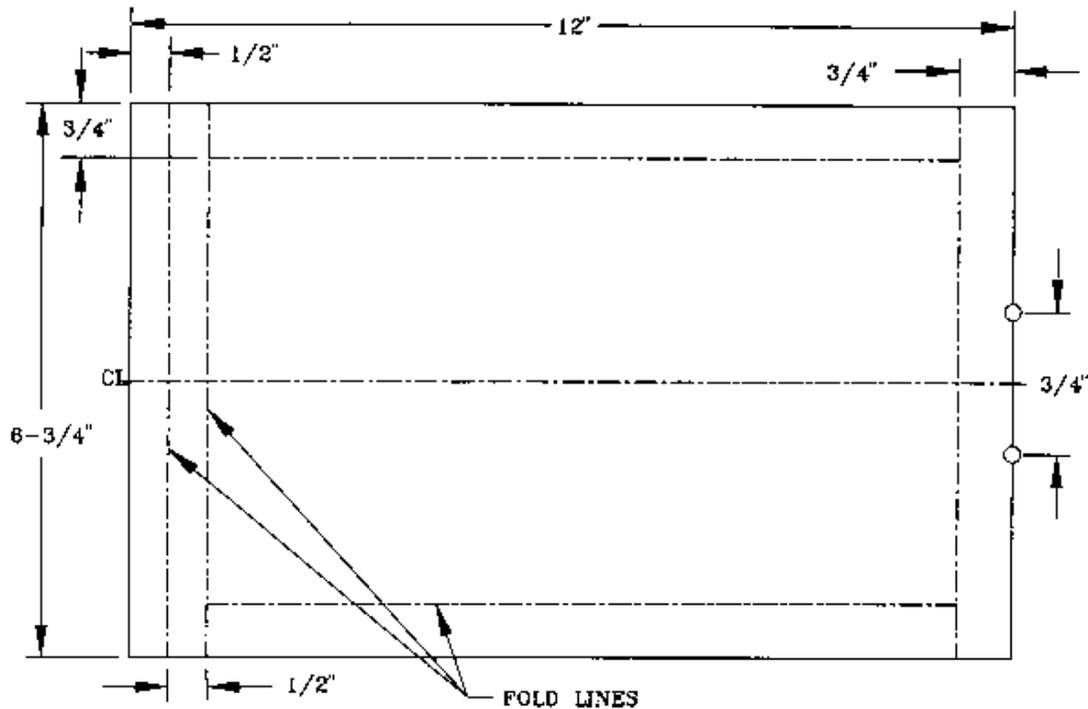

Fig. 5 (JUMP PACK, PARACHUTIST) POCKET ASSEMBLY, LOWERING LINE

PROCEDURE	MATERIALS	NOTE
1. CUT CLOTH TO DIMENSIONS SHOWN.	CLOTH, DUCK, COTTON, TYPE X	DIMENSIONS SHOWN ARE IN INCHES.
2. FOLD CLOTH ALONG FOLD LINES INTO POCKET SHOWN.	THREAD, NYLON, SIZE E	TOLERANCE IS 1/8-IN.
3. SEW LENGTHWISE FOLDS AS SHOWN.		
4. PLACE POCKET ONTO PACK AND SEW AS SHOWN IN VIEW D. USE 7 TO 11 STITCHES PER INCH AND A LD SEWING MACHINE.		

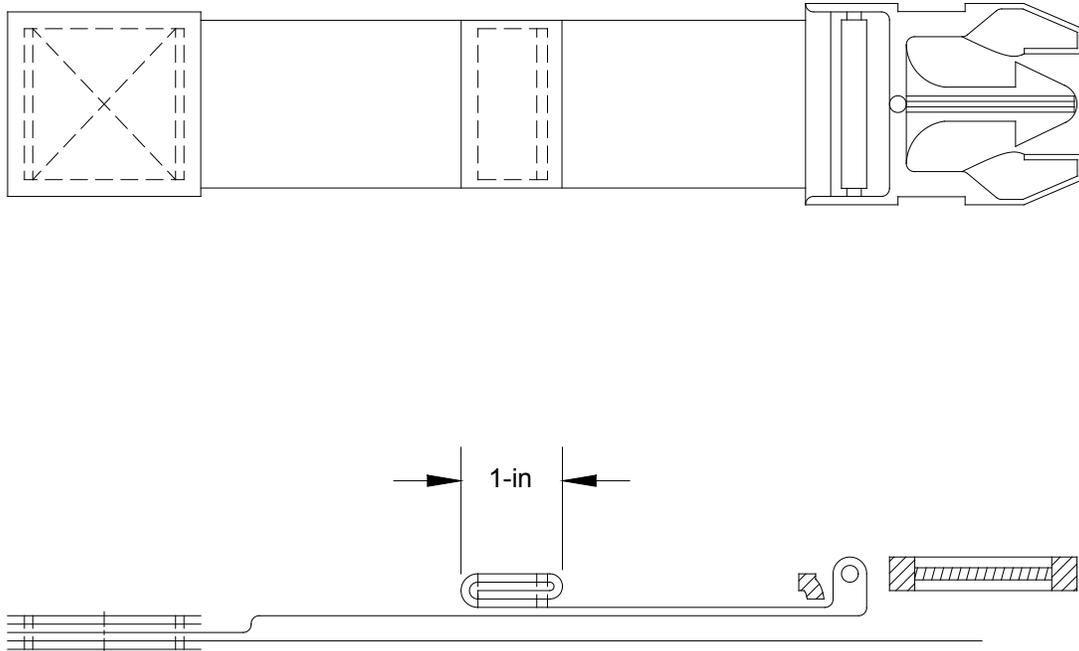

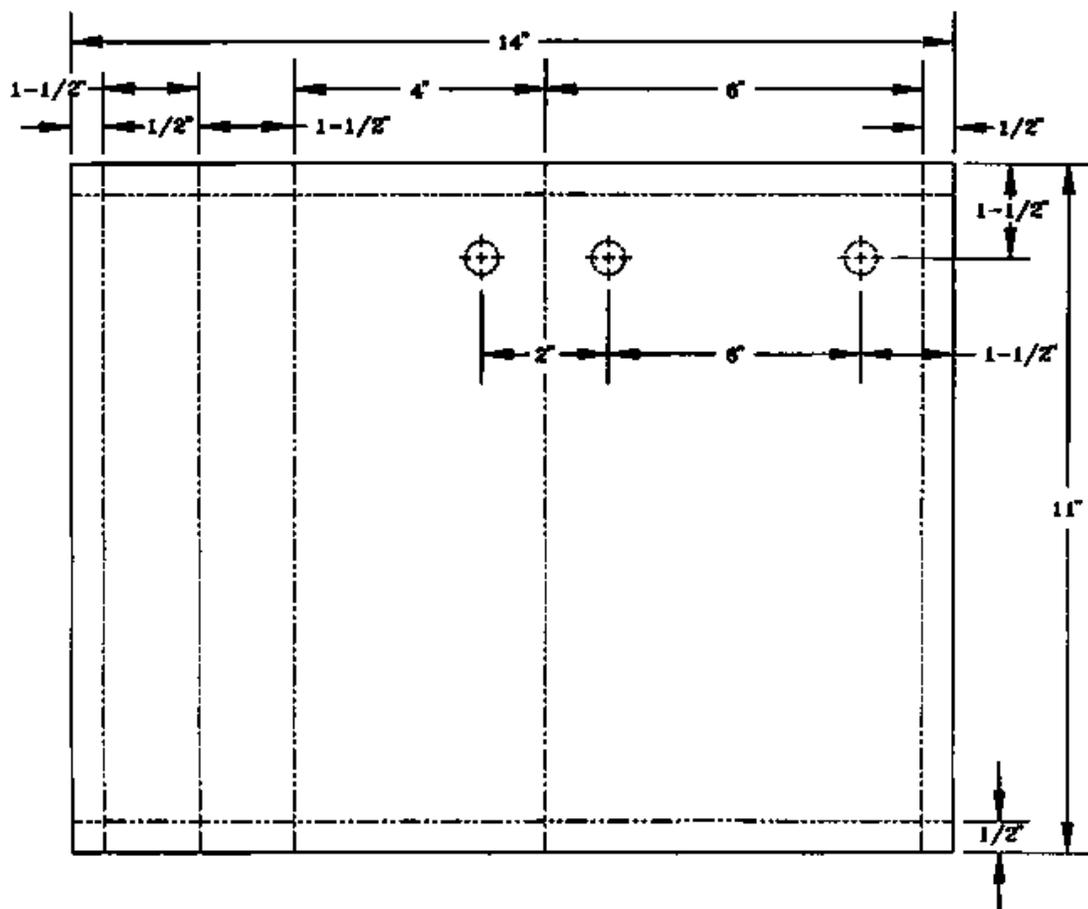

Fig. 6 (HARNESS, SINGLE POINT RELEASE) STRAP, CROSS ADJUSTABLE

PROCEDURE	MATERIALS	NOTE
1. CUT 62-IN LENGTH OF WEBBING AND SEAR ENDS.	WEBBING, NYLON, TYPE VIII.	DIMENSIONS SHOWN ARE IN INCHES.
2. THREAD ON END OF WEBBING THROUGH SIDE RELEASE BUCKLE AND FOLD END FOUR TIMES. SEW WITH SIZE 3 THREAD, 5 TO 8 STITCHES PER INCH AND HD SEWING MACHINE.	THREAD, NYLON, SIZE 3	TOLERANCE IS 1/8-IN.

VIEW A

Fig. 7 (AT4 PACK) POCKET ASSEMBLY LOWERING LINE (SHEET 1 OF 2)

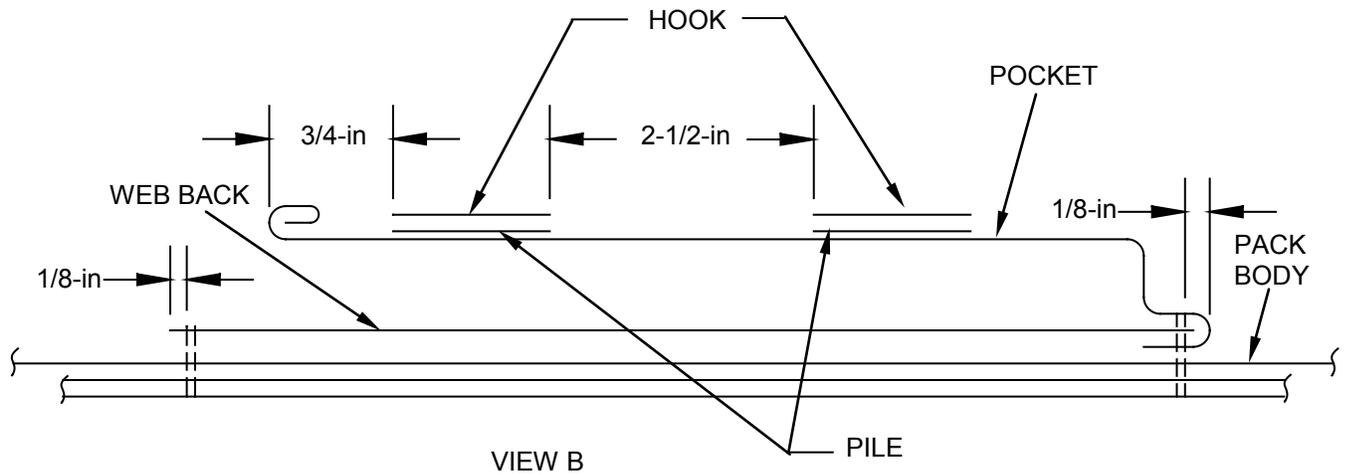

Fig. 7 (AT4 PACK) POCKET ASSEMBLY LOWERING LINE (SHEET 2 OF 2)

PROCEDURE	MATERIALS	NOTE
1. CUT CLOTH TO DIMENSIONS SHOWN IN VIEW A.	CLOTH, DUCK, NYLON, TYPE X.	DIMENSIONS SHOWN ARE IN INCHES.
2. DOUBLE FOLD TOP EDGE OF POCKET 1/2-IN. STITCH WITH SIZE FF THREAD, 6 TO 9 STITCHES PER INCH AND A MD SEWING MACHINE.	THREAD, NYLON, SIZE FF THREAD, NYLON, SIZE 3	TOLERANCE IS 1/8-IN.
3. ALIGN CORNERS (1) AND (2) AND SEW SIDES 1/2-IN FROM EDGE. SEW CORNERS (3) AND (4) IN SAME MANNER.	TAPE, FASTENER, PILE 2-IN WIDE TAPE, FASTENER, HOOK 2-IN WIDE	
4. REPLACE HOOK AND PILE TAPE AS SHOWN IN VIEW B. SEW AS IN 2. ABOVE.		
5. CUT AN 11-IN LENGTH OF NYLON WEBBING AND SEAR ENDS.		

(AT4 PACK) POCKET ASSEMBLY LOWERING LINE-CONTINUED

6. TURN UNDER RAW EDGE OF POCKET 1/2-IN AND POSITION ON WEBBING BACK 1-IN FROM EDGE LOCATING TOP AND BOTTOM HOOK AND PILE RETAINERS 1-IN AND 4-IN FROM THE TOP OF POCKET. STITCH POCKET SIDES AND BOTTOM TO REINFORCEMENT WEBBING 3/16-IN FROM EDGE. SEW AS IN 2. ABOVE,
7. PLACE POCKET ON PACK AND STITCH TO PACK 1/8-IN FROM POCKET EDGE WITH SIZE 3 THREAD, 5 TO 8 STITCHES PER INCH AND A MD SEWING MACHINE.

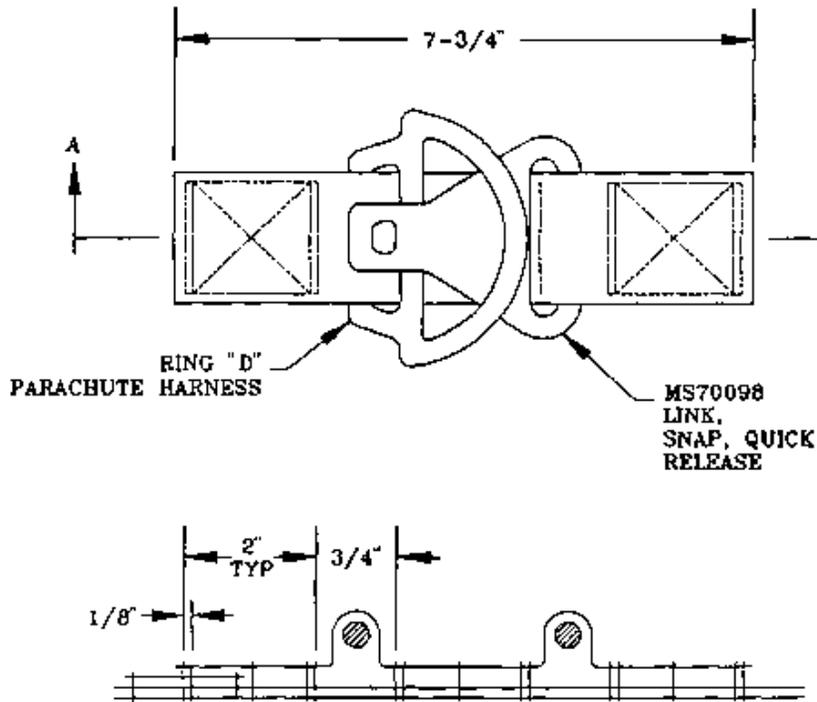

Fig. 8 (AT4 PACK) FORWARD END CROSS STRAP

PROCEDURE	MATERIALS	NOTE
1. CUT WEBBING TO LENGTH SHOWN AND SHEAR ENDS.	WEBBING, NYLON, TYPE VIII	DIMENSIONS SHOWN ARE IN INCHES.
2. MARK WEBBING 2-1/8-IN FROM EACH END.	THREAD, NYLON, SIZE 3	TOLERANCE IS 1/8-IN.
3. POSITION CHAPE ON PACK AND SEW USING SIZE 3 THREAD, 5 TO 8 STITCHES PER INCH AND A HD SEWING MACHINE.		

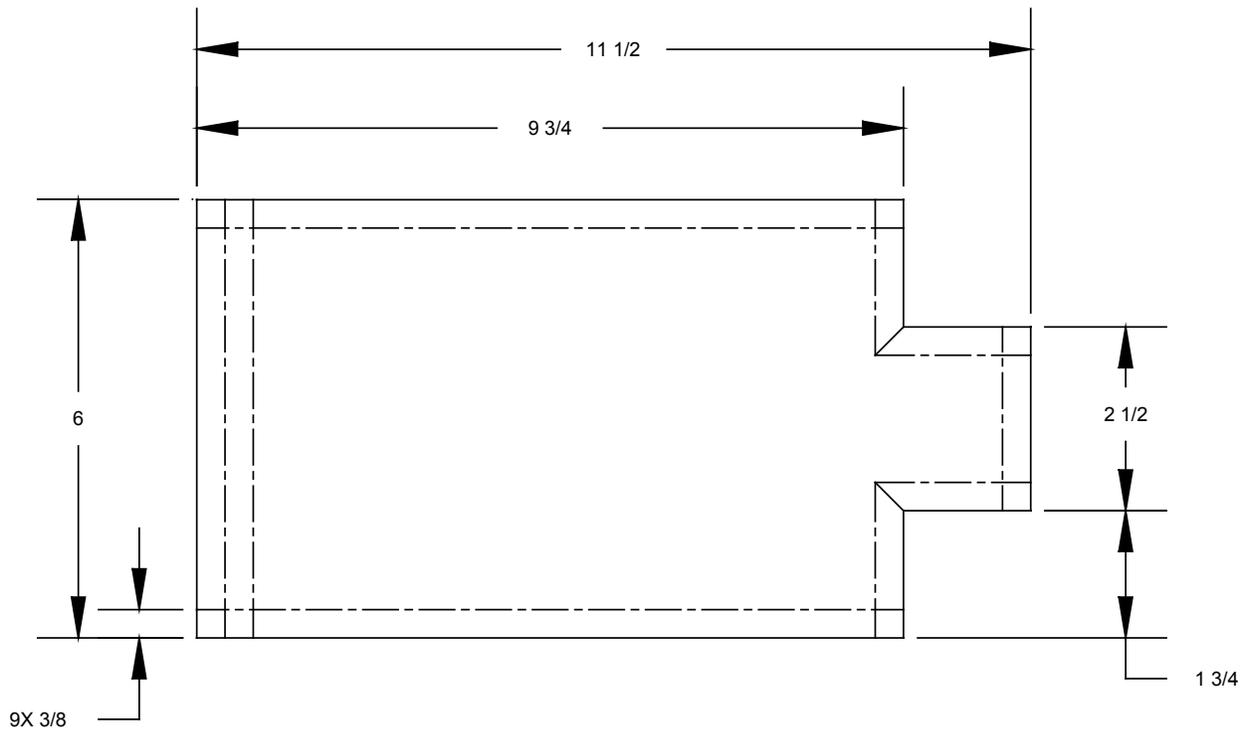

Fig. 11 (INDIVIDUAL WEAPONS CASE, M-1950, NYLON) POCKET ASSEMBLY, LOWERING

PROCEDURE	MATERIALS	NOTE
1. CUT AN 11-1/2-IN BY 6-IN LENGTH OF CLOTH. ENSURE THAT ONE OF THE 11-1/2-IN SIDES RUN ALONG THE SELVAGED EDGE OF THE MATERIAL.	CLOTH, DUCK, NYLON, 12.5 OUNCE, CLASS 2-DYED, WATER REPELLANT, PER MIL-C-43375, COLOR CAMOUFLAGE GREEN NO.483	DIMENSIONS SHOWN ARE IN INCHES.
2. MARK FOLD LINES ON MATERIAL AS SHOWN.	THREAD, NYLON, SIZE FF	TOLERANCE IS 1/8-IN.
3. TURN UNDER SELVAGED EDGE 3/8-IN AND SEW ALONG MATERIAL 3/8-IN FROM EDGE. USE SIZE FF THREAD, 6 TO 9 STITCHES PER INCH AND A MD SEWING MACHINE.		
4. FOLD CLOTH ALONG FOLD LINES, PLACING SELVAGE ON INSIDE. SEW MATERIAL ALONG FOLD LINE 3/8-IN FROM FOLD.		

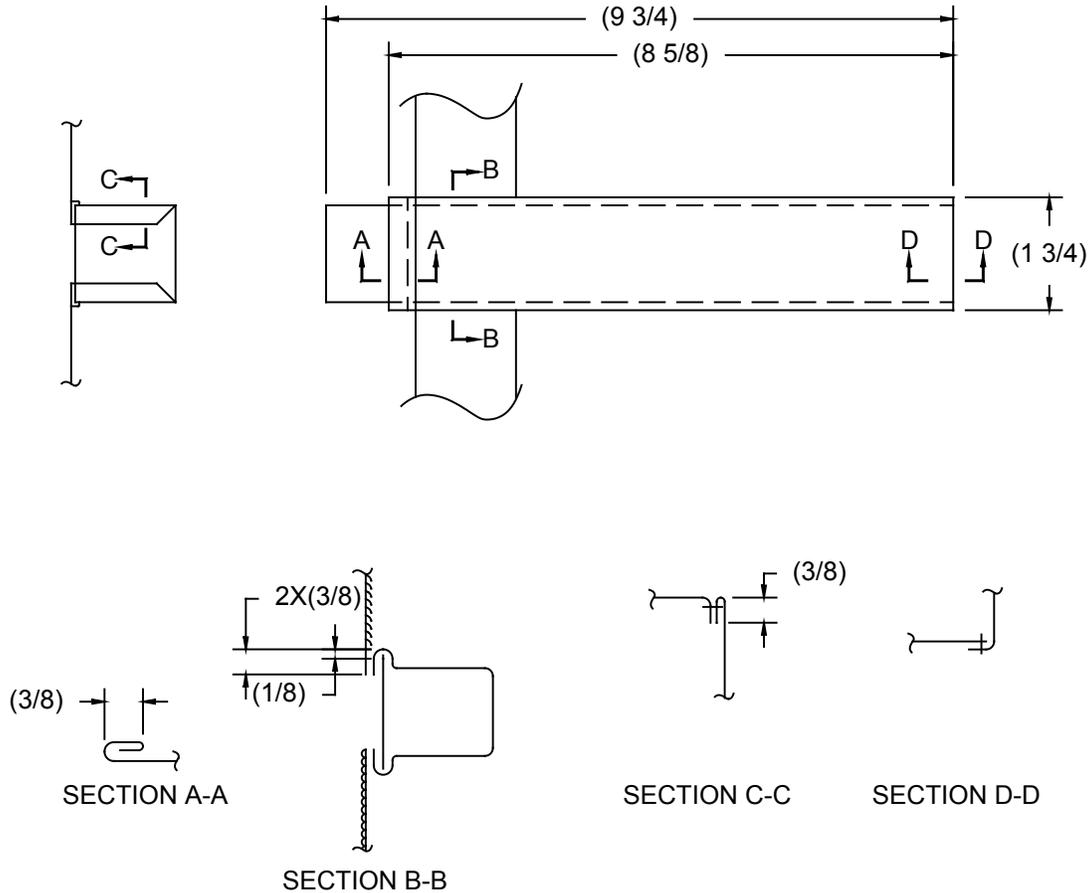

Fig. 12 (INDIVIDUAL WEAPONS CASE, M-1950, NYLON) LOWER STRAP POCKET ASSEMBLY

PROCEDURE	MATERIALS	NOTE
1. FABRICATE LOWER STRAP POCKET ASSEMBLY	WEBBING, TEXTILE TYPE XII	DIMENSIONS SHOWN ARE IN INCHES.
2. FUSE ALL EXPOSED ENDS OF NYLON TAPE EVEN TO PREVENT FRAYING. AVOID FORMING SHARP EDGES.	FASTENER, PILE 1-1/2-IN WIDE FASTENER, HOOK, 1-1/2-IN WIDE THREAD, NYLON, SIZE FF	ALL STITCHING SHALL BE BACKSTITCHED NOT LESS THAN 1-IN UNLESS TURNED UNDER BY A HEM OR HELD DOWN BY OTHER STITCHING. ALL STITCHING TO BE 1/8-IN FROM EDGE OR SPACED 1/8-IN APART. TOLERANCES: 1/8-IN OR MORE BUT LESS THAN 2-IN: 1/16-IN. 2-IN OR MORE BUT LESS THAN 10-IN: 1/8-IN.

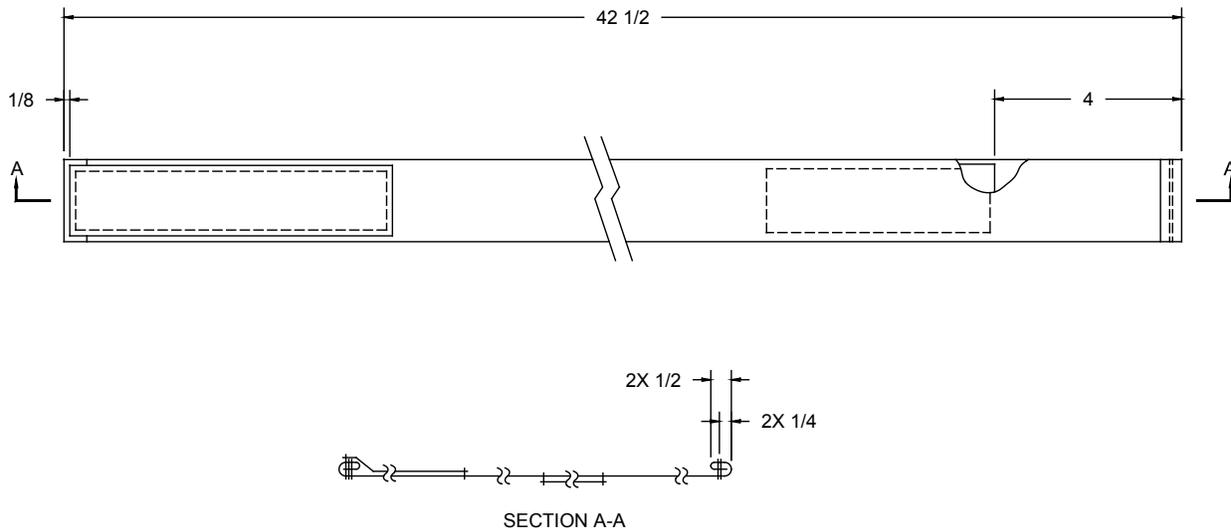

Fig. 13 (INDIVIDUAL WEAPONS CASE, M-1950 (NYLON)) LOWER LEG STRAP ASSEMBLY

PROCEDURE	MATERIALS	NOTE
1. FABRICATE LOWER LEG STRAP ASSEMBLY	WEBBING, NYLON TYPE VIII	DIMENSIONS SHOWN ARE IN INCHES.
2. FUSE ALL EXPOSED ENDS OF NYLON TAPE EVEN TO PREVENT FRAYING. AVOID FORMING SHARP EDGES.	FASTENER, PILE 1-1/2-IN WIDE FASTENER, HOOK 1-1/2-IN WIDE THREAD, NYLON, SIZE FF	TOLERANCES: 1/8-IN OR MORE BUT LESS THAN 2-IN: 1/16-IN. 2-IN OR MORE BUT LESS THAN 10-IN: 1/8-IN. 10-IN OR MORE BUT LESS THAN 30-IN: 1/4-IN. 30-IN OR MORE: 1/2-IN

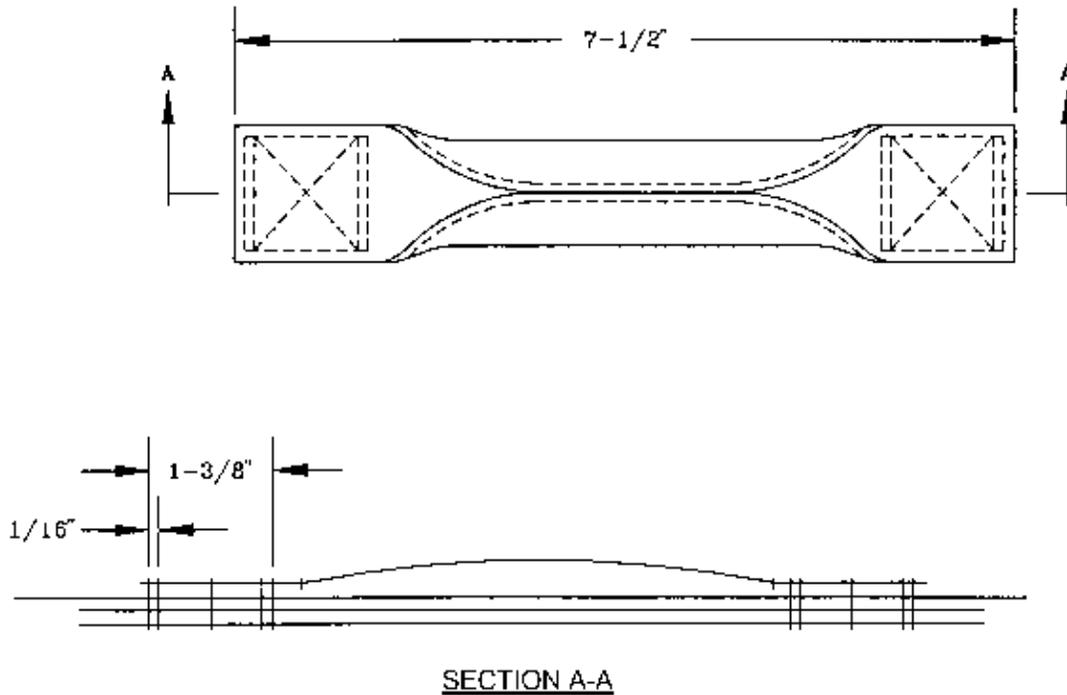

Fig. 17 (STINGER MISSILE PACK) STRAP, CARRYING

PROCEDURE	MATERIALS	NOTE
1. FABRICATE HANDLE AS SHOWN AND SEW USING SIZE 3 THREAD, 5 TO 8 STITCHES PER INCH AND A HD SEWING MACHINE.	WEBBING, NYLON, TYPE VIII THREAD, NYLON, SIZE 3	DIMENSIONS SHOWN ARE IN INCHES. TOLERANCE IS 1/8-IN.

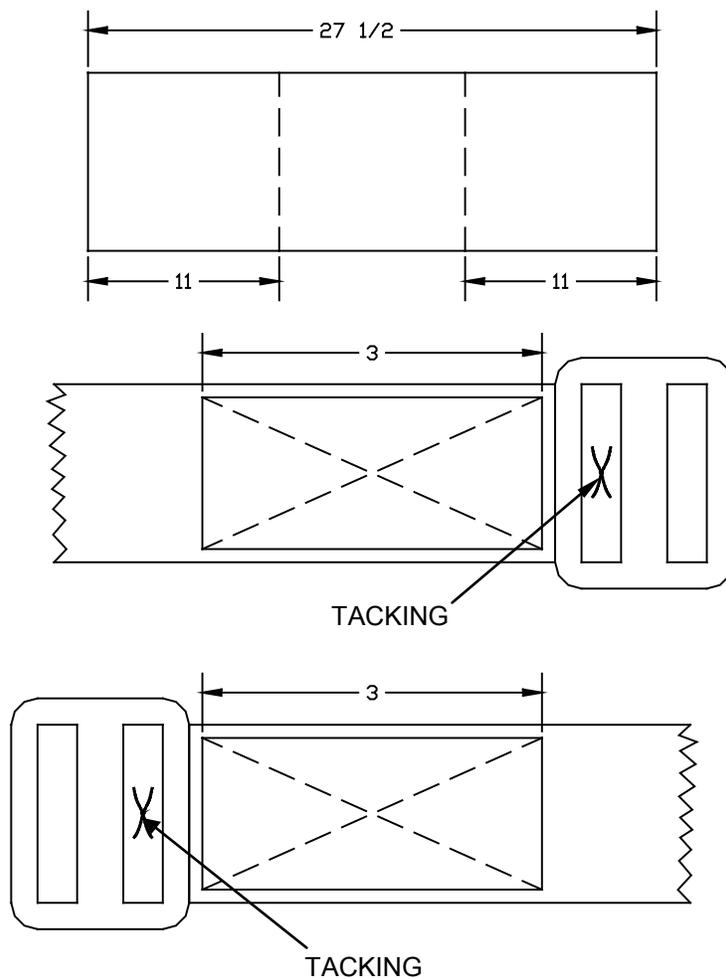

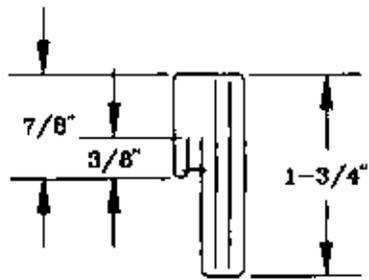

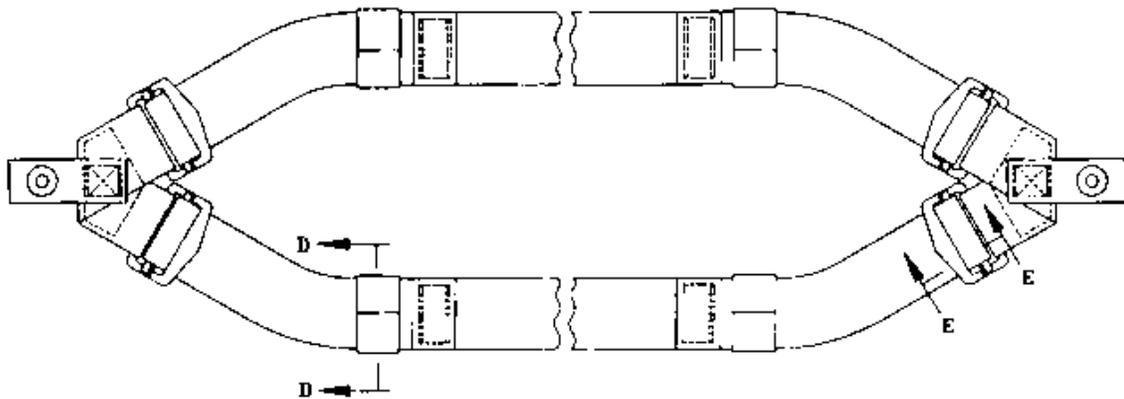

Fig. 18 (ARCTIC RIGGING EXTENSION) WAISTBAND, MODIFIED

PROCEDURE	MATERIALS	NOTE
1. CUT A 27-1/2-IN LENGTH OF TYPE X WEBBING, SEAR BOTH ENDS.	BUCKLE, 2EA, MS22014-3, 5340-00-360-0235, FC31 (FROM BER T-10 PACK TRAY)	DIMENSIONS SHOWN ARE IN INCHES.
2. PLACE MARKS 11-IN FROM THE EDGE OF BOTH ENDS.	27-1/2-IN TYPE X WEBBING.	TOLERANCE IS 1/4-IN.
3. ROUTE BUCKLE INTO WEBBING.	72-IN TYPE X WEBBING (WAISTBAND)	
4. FOLD RUNNING ENDS TO MARKS AND STITCH WITH SINGLE 3-IN BOX X STITCH FORMATION. USING SIZE 3 THREAD, 5 TO 8 STITCHES PER INCH AND A HD SEWING MACHINE	THREAD TYPE 5 NYLON CORD	THIS MODIFIED WAISTBAND STRAP IS USED IN LIEU OF THE STANDARD WAISTBAND WHEN PARACHUTING WITH SNOWSHOES.
5. HAND TACK EACH BUCKLE WITH ONE TURN DOUBLE TAPE, LACING AND TYING WITH AND OVERHAND KNOT.	TAPE, LACING, NYLON, MIL-T-43435 (SUPER TACK)	SEE FM 57-220 CHAPTER 13 FOR RIGGING PROCEDURES.
6. CUT A 72-IN LENGTH OF TYPE X WEBBING FOR THE WAISTBAND, SEAR BOTH ENDS WITH HOT KNIFE.		
7. FINISHED LENGTH OF WAISTBAND ADAPTER STRAP 16-IN.		

SECTION D-D

SECTION E-E

Fig. 19 (CONTAINER FRONT MOUNTED) HORIZONTAL RESTRAINT ASSEMBLY

PROCEDURE	MATERIALS	NOTE
1. FABRICATE HORIZONTAL RESTRAINT ASSEMBLY AS SHOWN.	WEBBING, NYLON, TYPE VIII THREAD, NYLON, SIZE 3	DIMENSIONS SHOWN ARE IN INCHES. TOLERANCE IS 1/8-IN.

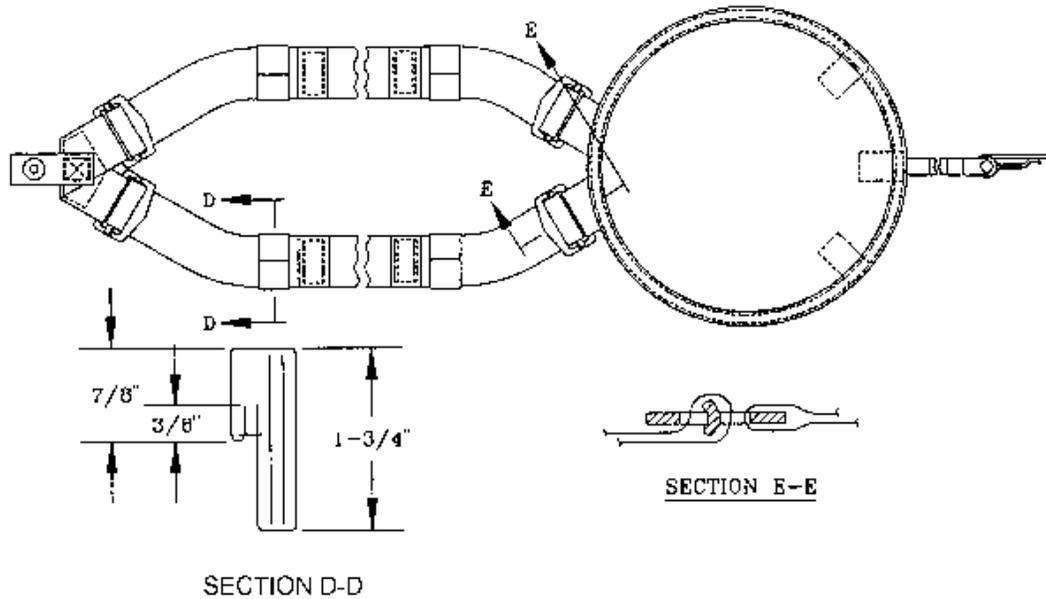

Fig. 20 (CONTAINER FRONT MOUNTED) VERTICAL RESTRAINT ASSEMBLY (SHEET 1 OF 3)

PROCEDURE	MATERIALS	NOTE
1. FABRICATE VERTICAL RESTRAINT ASSEMBLY AS SHOWN.	WEBBING, NYLON, TYPE III	DIMENSIONS SHOWN ARE IN INCHES.
	THREAD, NYLON, SIZE 3	TOLERANCE IS 1/8-IN.
	WEBBING, NYLON, TYPE VIII	
	WEBBING, NYLON, TYPE III	
	WEBBING, NYLON, TYPE I	
	CORD, POLYESTER, CORDLESS	
	TAPE, FASTENER, PILE	

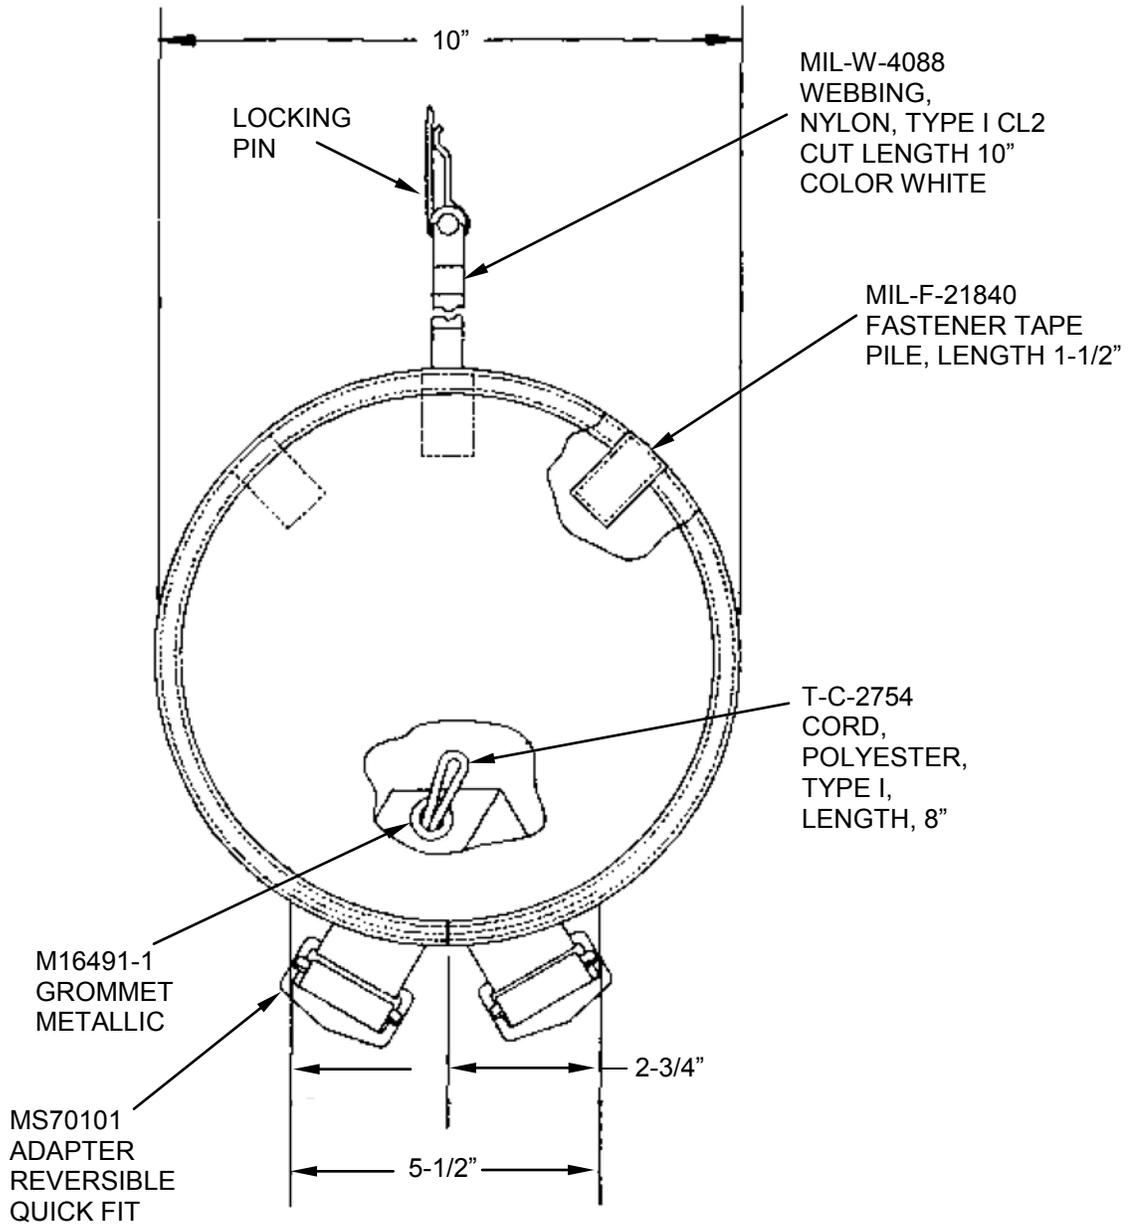

Fig. 20 (CONTAINER FRONT MOUNTED) VERTICAL RESTRAINT ASSEMBLY (SHEET 2 OF 3)

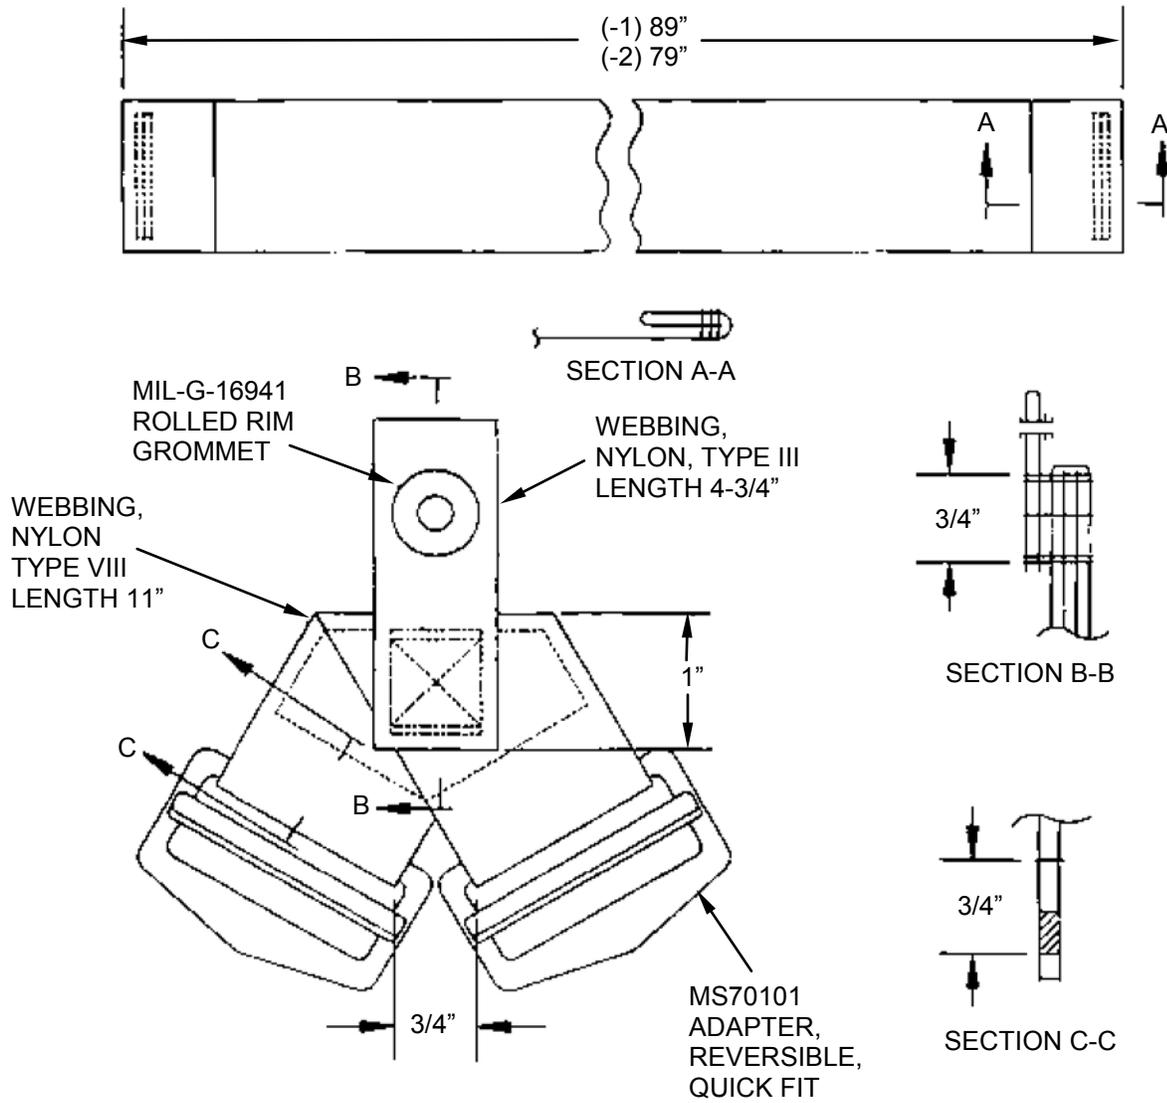

Fig. 20 (CONTAINER FRONT MOUNTED) VERTICAL RESTRAINT ASSEMBLY (SHEET 3 OF 3)

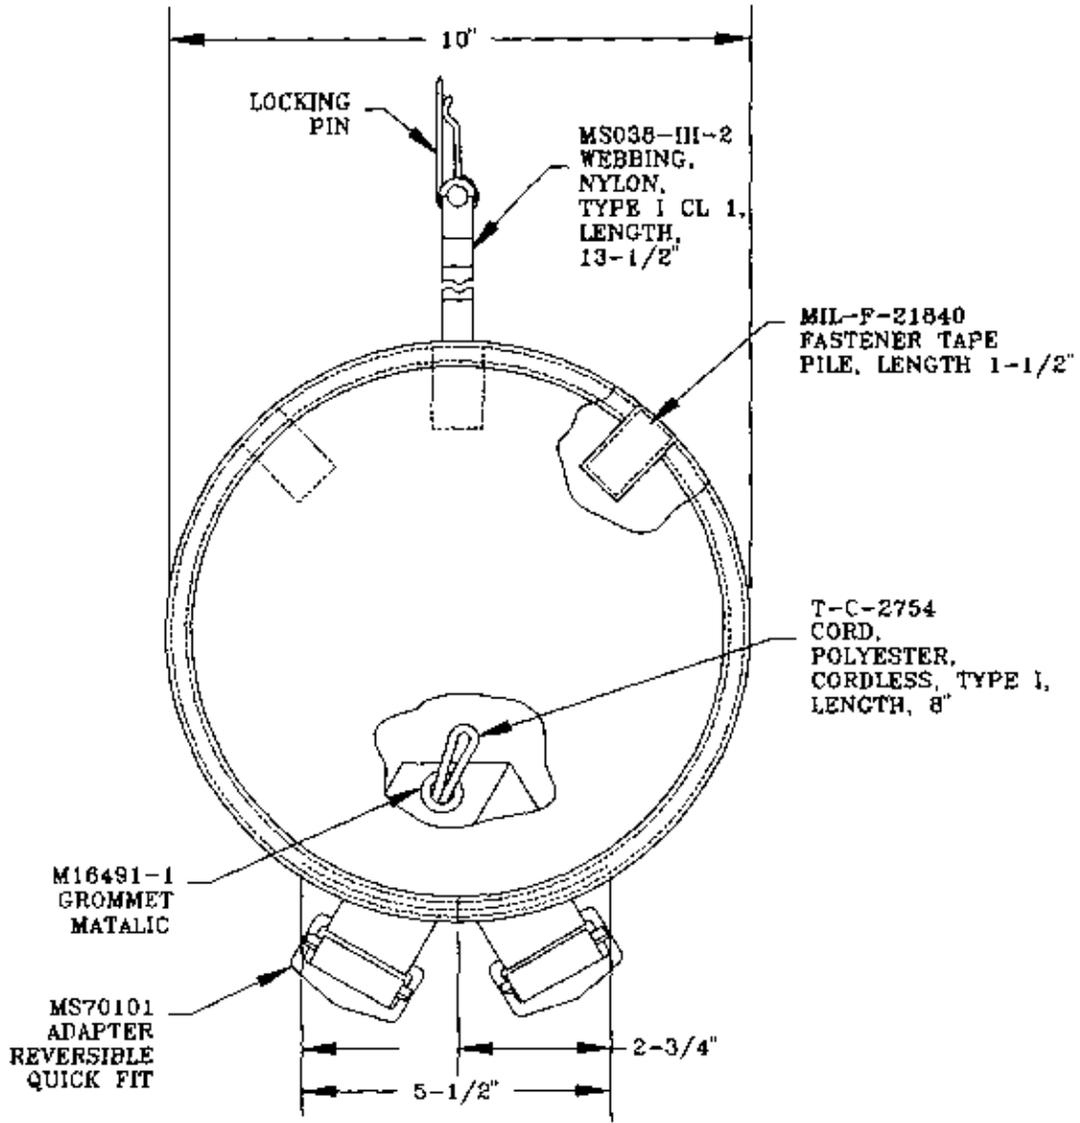

Fig. 21 (CONTAINER FRONT MOUNTED) CLOSING FLAP ASSEMBLY

PROCEDURE	MATERIALS	NOTE
1. FABRICATE CLOSING FLAP ASSEMBLY AS SHOWN.	WEBBING, NYLON, TYPE I	DIMENSIONS SHOWN ARE IN INCHES.
	CORD, POLYESTER, CORDLESS, TYPE I	TOLERANCE IS 1/8-IN.

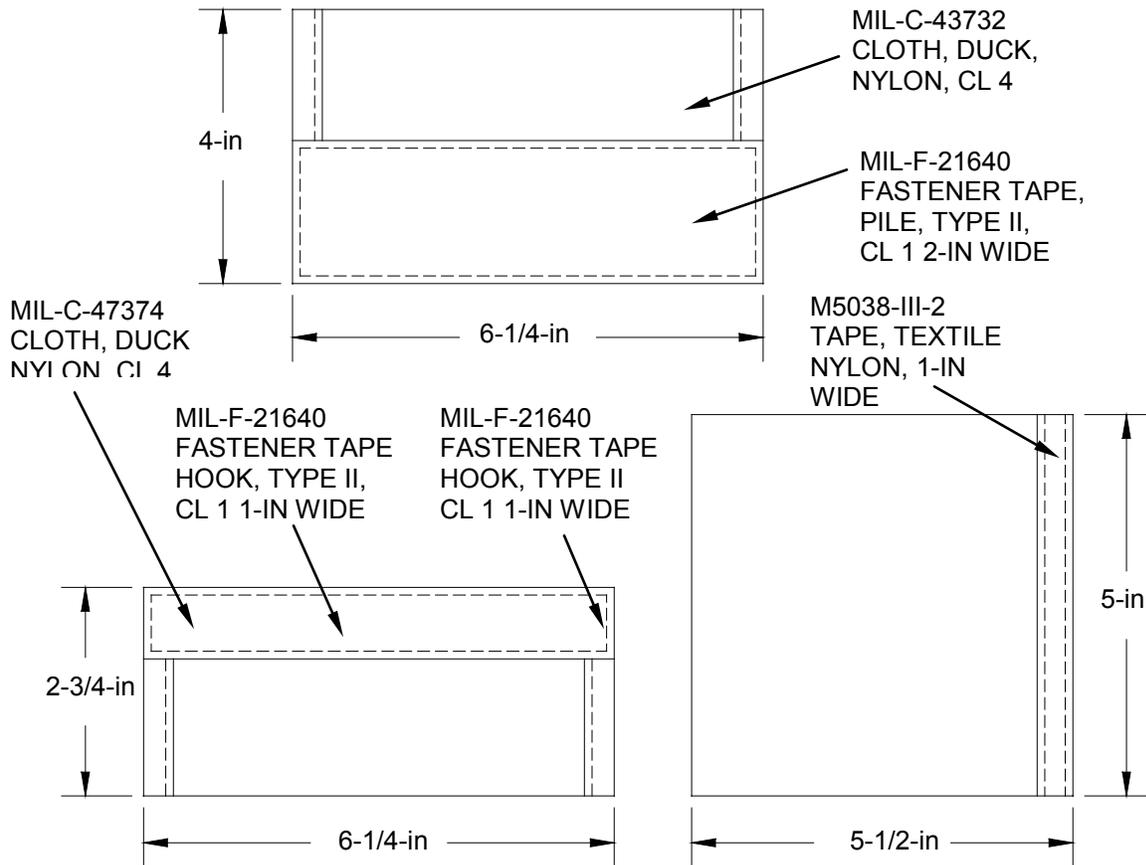

Fig. 22 (CONTAINER FRONT MOUNTED) LOWERING LINE POCKET, FLAPS AND LOOP

PROCEDURE	MATERIALS	NOTE
1. FABRICATE LOWERING LINE POCKET FLAPS AND LOOP AS SHOWN.	CLOTH, DUCK, NYLON CLASS 4.	DIMENSIONS SHOWN ARE IN INCHES.
	TAPE, FASTENER, PILE TYPE II, 2-IN WIDE	TOLERANCE IS 1/8-IN.
	TAPE, TEXTILE, NYLON 1-IN WIDE	
	TAPE, FASTENER, HOOK TYPE II, 1-IN WIDE.	

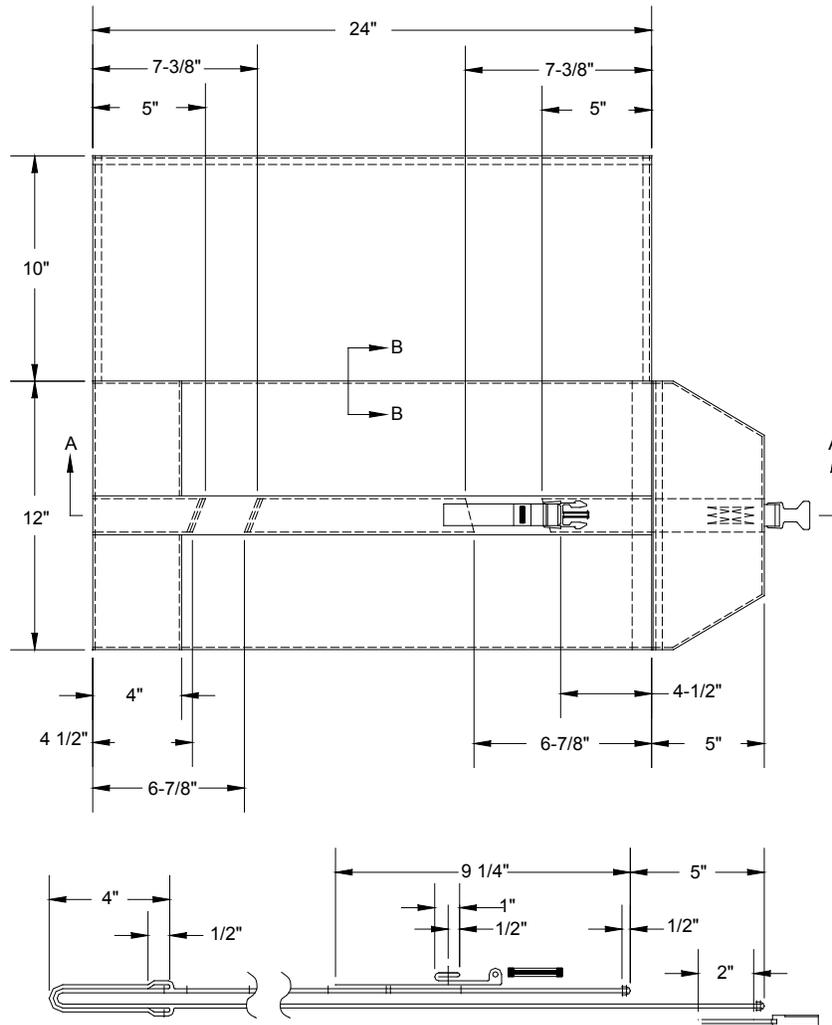

Fig. 23 (CONTAINER FRONT MOUNTED) SIDE CONTAINER ASSEMBLY

PROCEDURE	MATERIALS	NOTE
1. FABRICATE SIDE CONTAINER ASSEMBLY AS SHOWN.	CLOTH, DUCK, NYLON CLASS 4.	DIMENSIONS SHOWN ARE IN INCHES.
	TAPE, REINFORCING NYLON, 1-IN WIDE.	TOLERANCE IS 1/4-IN.
	WEBBING, NYLON TYPE VIII	
	THREAD, NYLON, SIZE 3 TYPE 301 STITCH, 5 TO 8 STITCHES PER INCH	

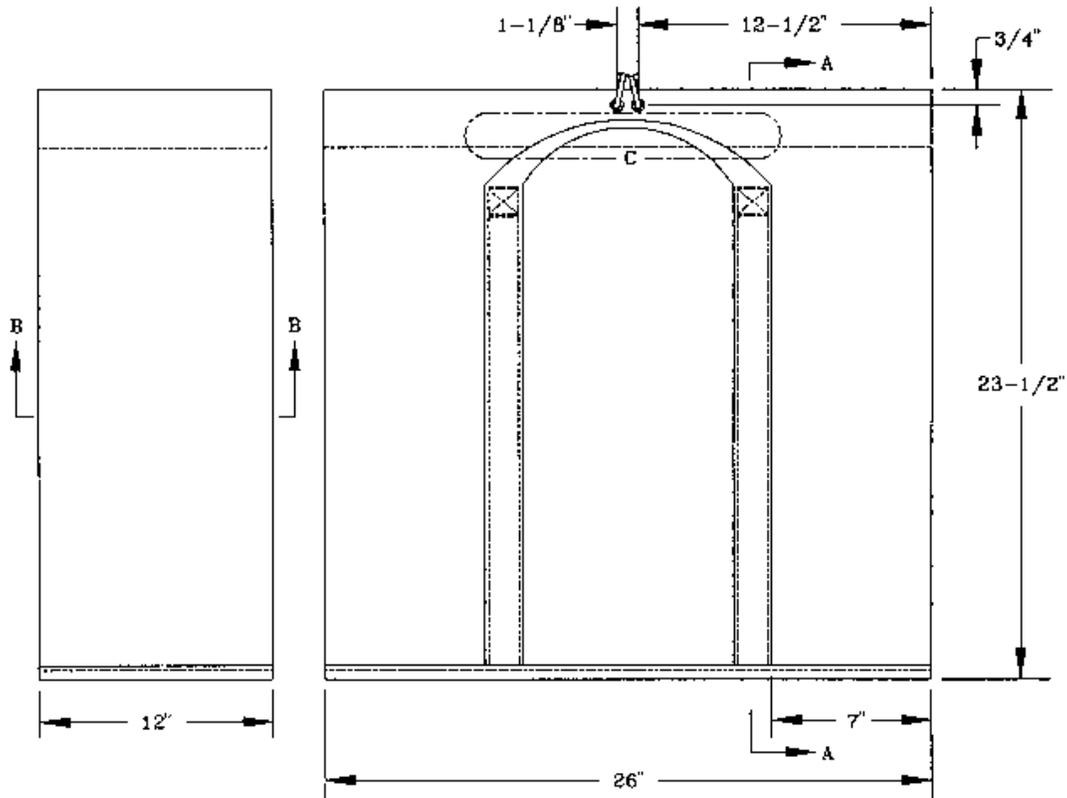

Fig. 24 (CONTAINER FRONT MOUNTED) KIT, BAG ASSEMBLY (SHEET 1 OF 2)

PROCEDURE	MATERIALS	NOTE
1. FABRICATE BAG ASSEMBLY AS SHOWN.	CLOTH, DUCK, NYLON CLASS 4.	DIMENSIONS SHOWN ARE IN INCHES.
	TAPE, REINFORCING NYLON, 1-IN WIDE.	TOLERANCE IS 1/4-IN.
	WEBBING, NYLON, TYPE VIII.	
	THREAD, NYLON, SIZE FF, TYPE 301 STITCH, 6 TO 9 SPI	
2. BARTACK	SIZE E THREAD, 42-48 SPI	
3. BINDING TAPE (MIL-T-5038)	SIZE E THREAD, TYPE 301 STITCH, 7 TO 11 SPI	
4. BOX STITCH	SIZE 3 THREAD, TYPE 301 STITCH, 5 TO 8 SPI	

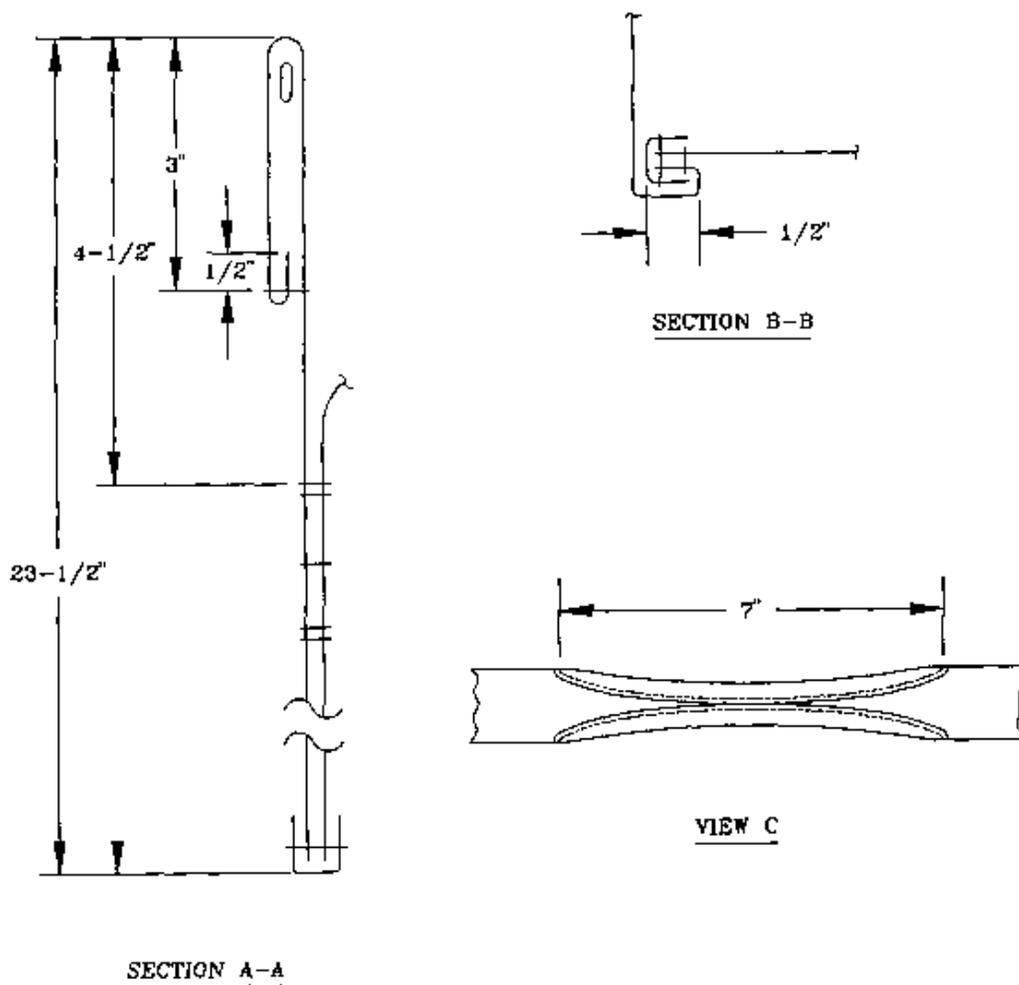

Fig. 24 (CONTAINER FRONT MOUNTED) KIT, BAG ASSEMBLY (SHEET 2 OF 2)

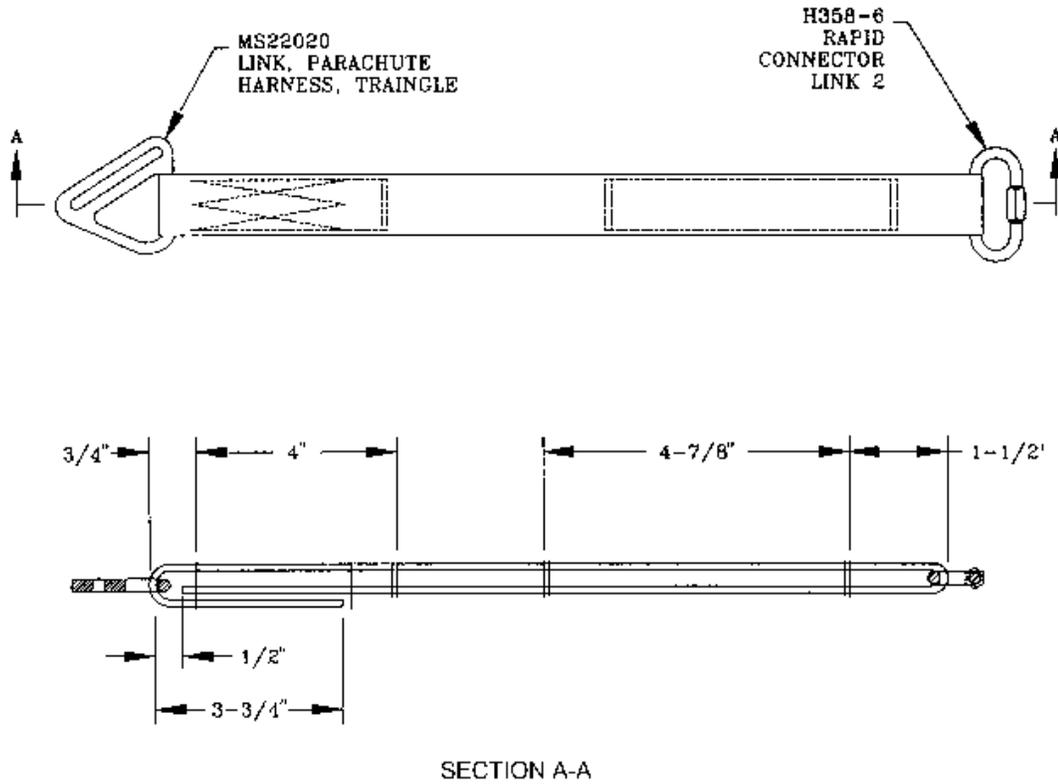

Fig. 25 (CONTAINER FRONT MOUNTED) BRIDLE ASSEMBLY

PROCEDURE	MATERIALS	NOTE
1. FABRICATE BRIDLE ASSEMBLY AS SHOWN.	WEBBING, NYLON, TUBULAR 1-IN WIDE.	DIMENSIONS SHOWN ARE IN INCHES.
	THREAD, NYLON, SIZE 3, TYPE 301 STITCH, 5 TO 8 SPI	TOLERANCE IS 1/4-IN.

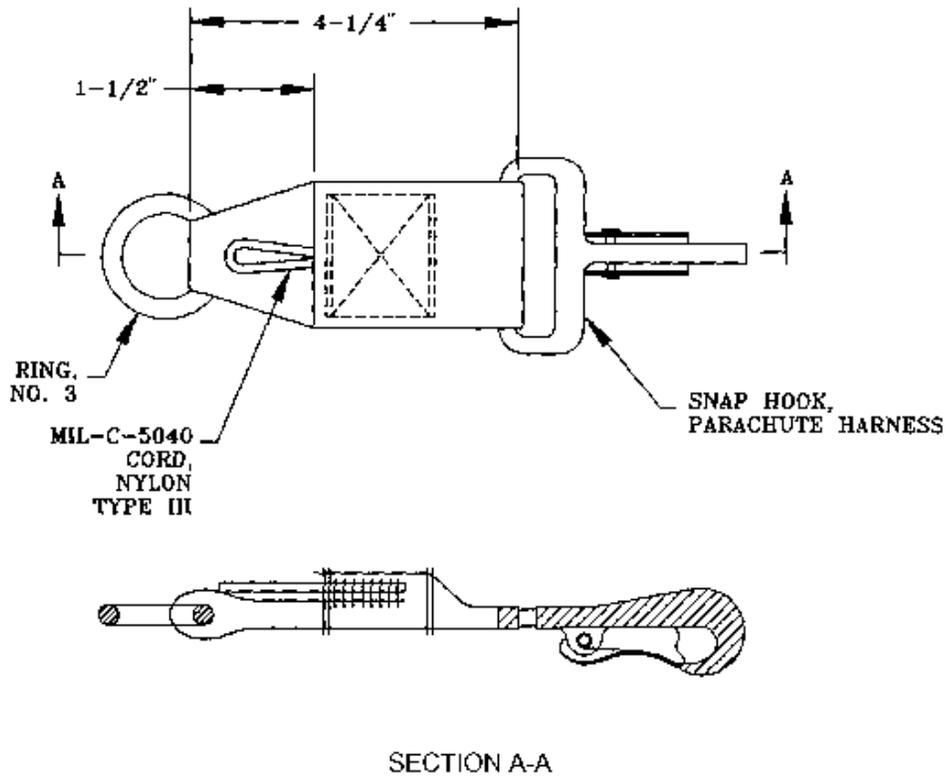

Fig. 26 (CONTAINER FRONT MOUNTED) ATTACHING STRAP

PROCEDURE	MATERIALS	NOTE
1. FABRICATE ATTACHING STRAP AS SHOWN.	WEBBING, NYLON, TYPE VII.	DIMENSIONS SHOWN ARE IN INCHES.
	THREAD, NYLON, SIZE 3	TOLERANCE IS 1/4-IN.
	CORD, NYLON, TYPE III	

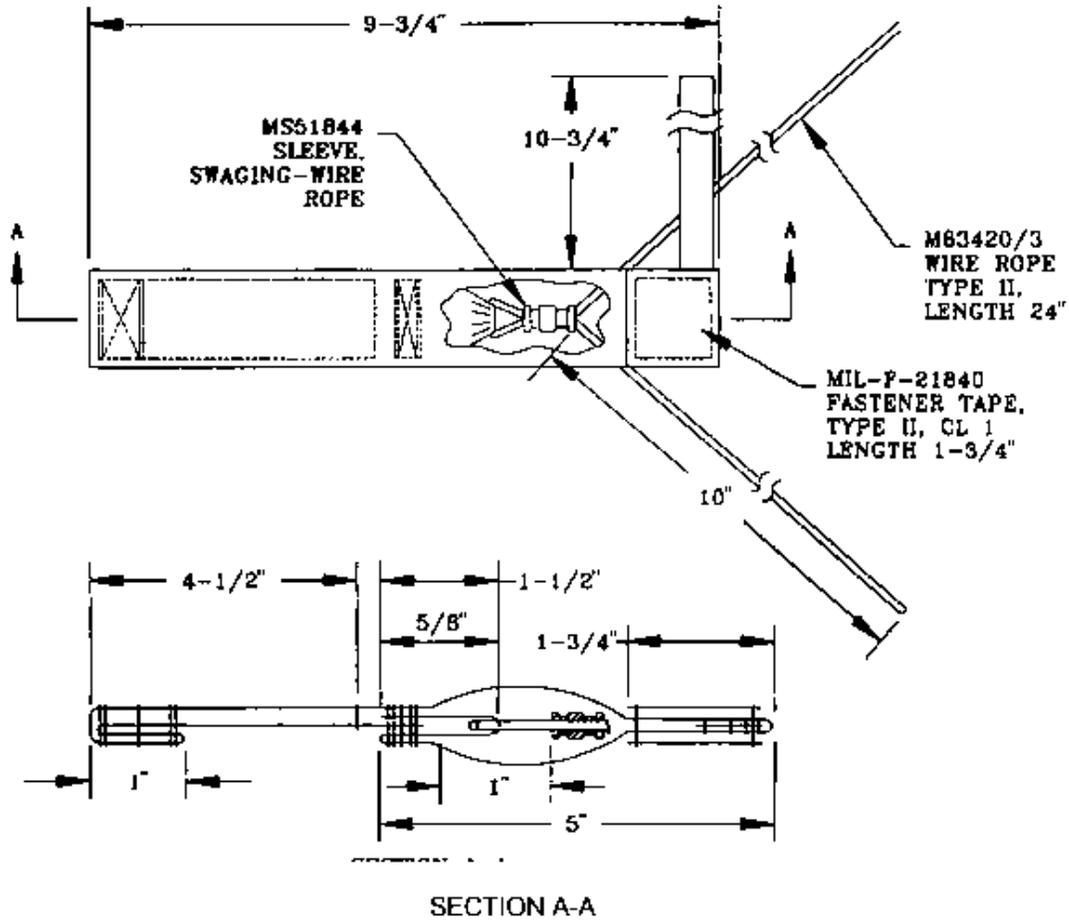

Fig. 27 (CONTAINER FRONT MOUNTED) RELEASE HANDLE ASSEMBLY

PROCEDURE	MATERIALS	NOTE
1. FABRICATE RELEASE HANDLE ASSEMBLY AS SHOWN.	WEBBING, NYLON, TYPE VIII.	DIMENSIONS SHOWN ARE IN INCHES.
	WEBBING, NYLON, TUBULAR, 1/2-IN WIDE	TOLERANCE IS 1/4-IN.
	TAPE, FASTENER, PILE TYPE II.	
	WIRE ROPE, TYPE II.	
	THREAD, NYLON, SIZE 3	

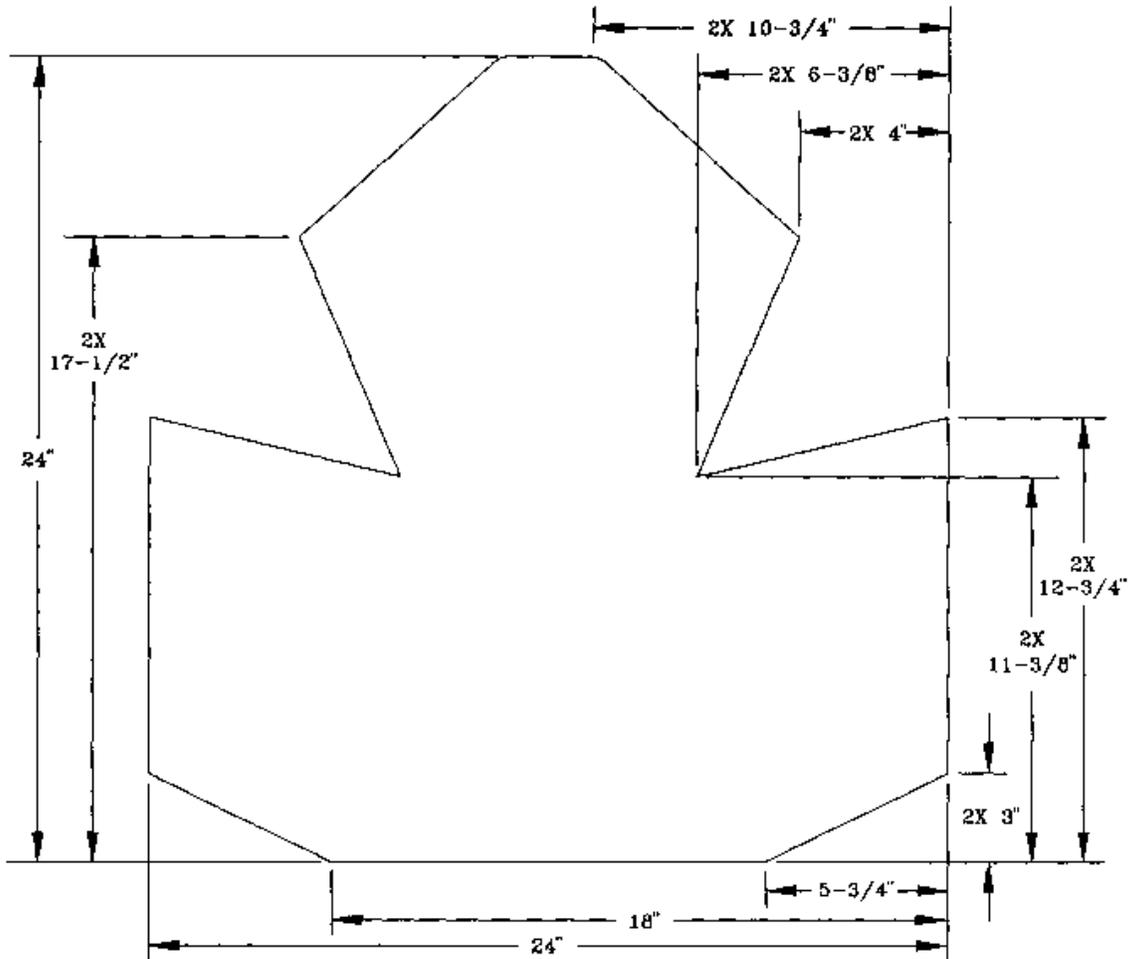

Fig. 28 (CONTAINER SIDE MOUNTED) UPPER CAP ASSEMBLY (SHEET 1 OF 2)

PROCEDURE	MATERIALS	NOTE
1. FABRICATE UPPER CAP ASSEMBLY AS SHOWN.	CLOTH, DUCK, TEXTURED TYPE VIII.	DIMENSIONS SHOWN ARE IN INCHES. TOLERANCE IS 1/4-IN.

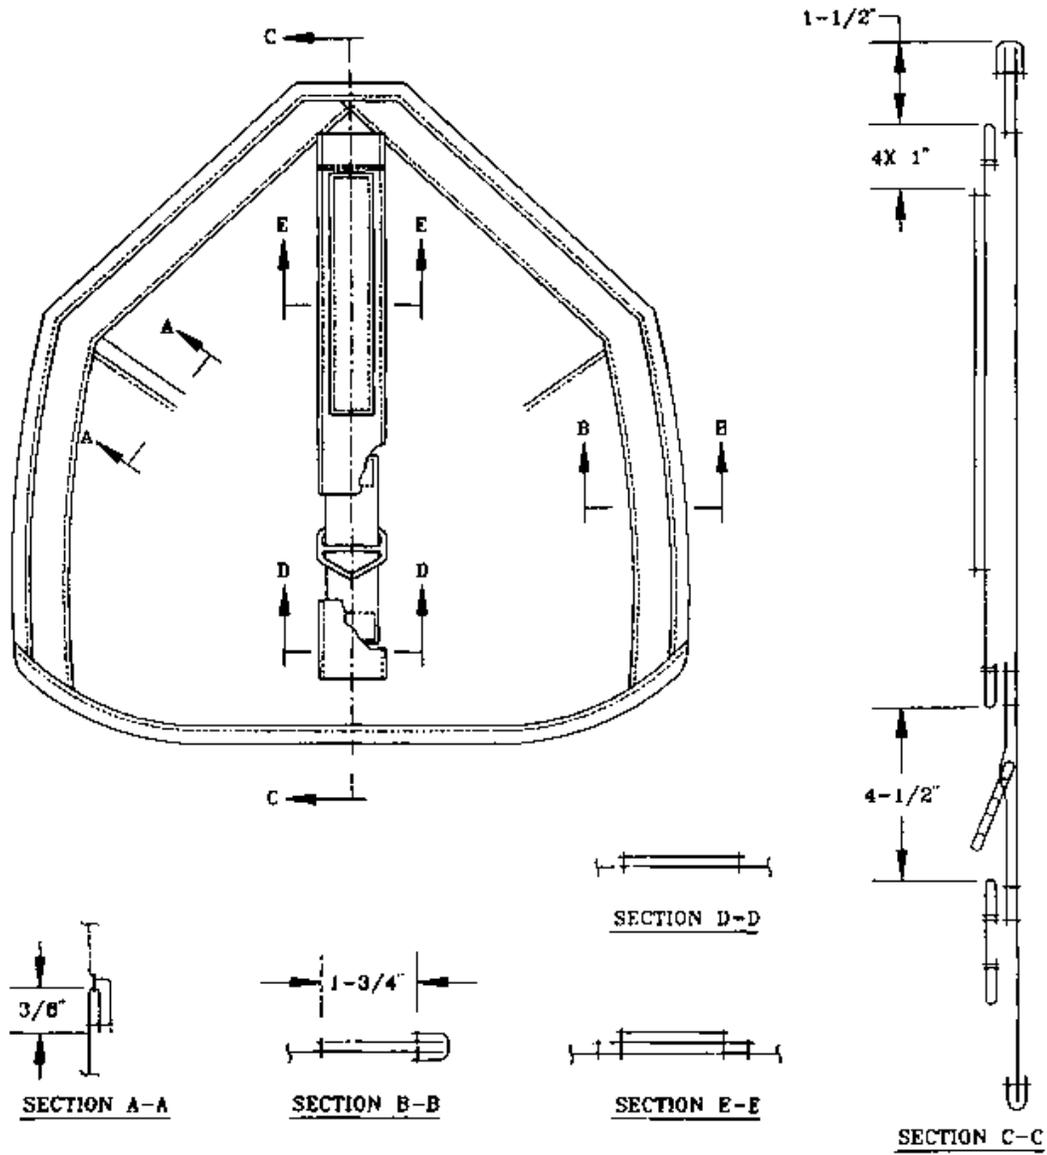

Fig. 28 (CONTAINER SIDE MOUNTED) UPPER CAP ASSEMBLY (SHEET 2 OF 2)

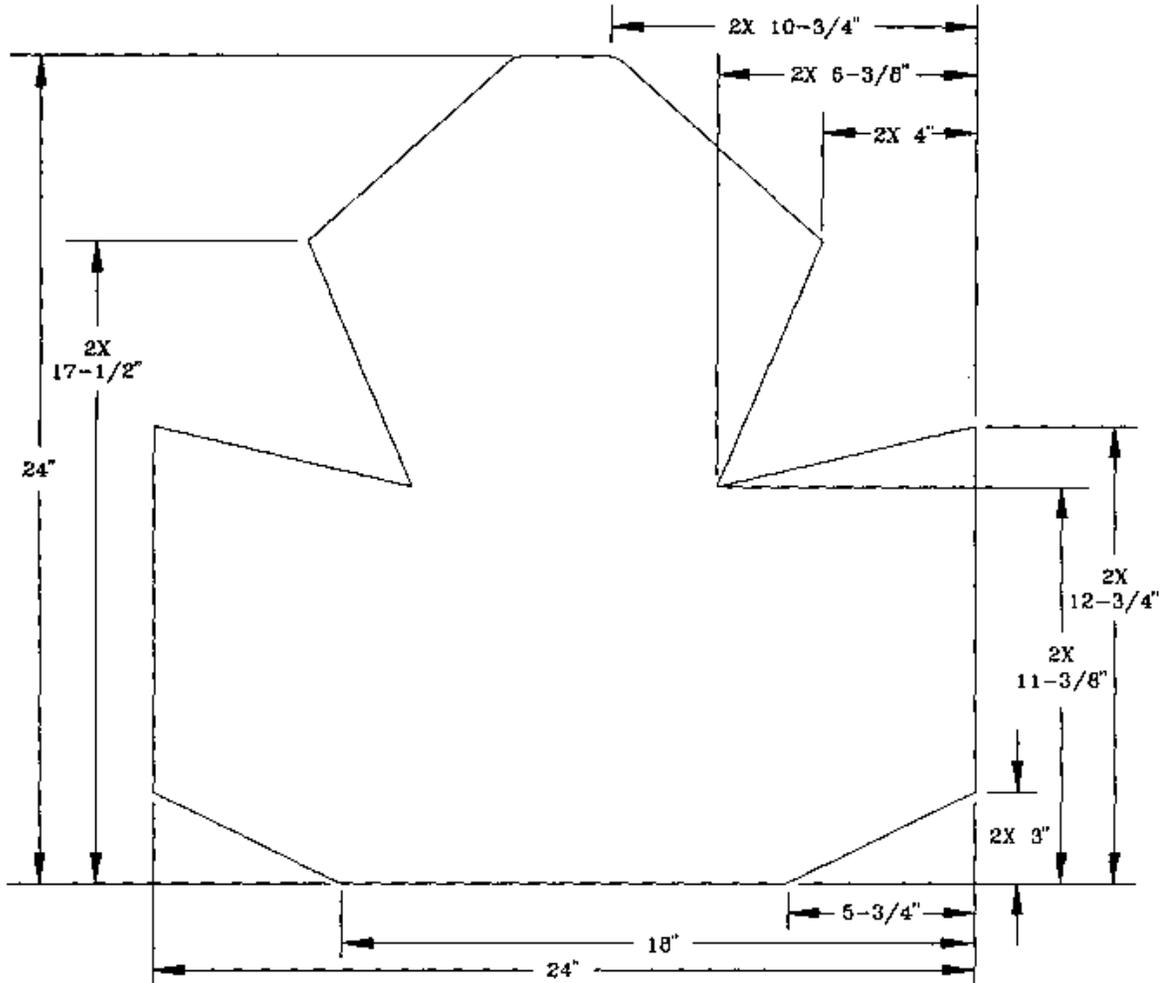

Fig. 29 (CONTAINER SIDE MOUNTED) LOWER CAP ASSEMBLY (SHEET 1 OF 2)

PROCEDURE

1. FABRICATE UPPER CAP ASSEMBLY AS SHOWN.

MATERIALS

CLOTH, DUCK, TEXTURED TYPE VIII.

SIZE FF THREAD, TYPE 301 STITCH, 6 TO 9 SPI

NOTE

DIMENSIONS SHOWN ARE IN INCHES.

TOLERANCE IS 1/4-IN.

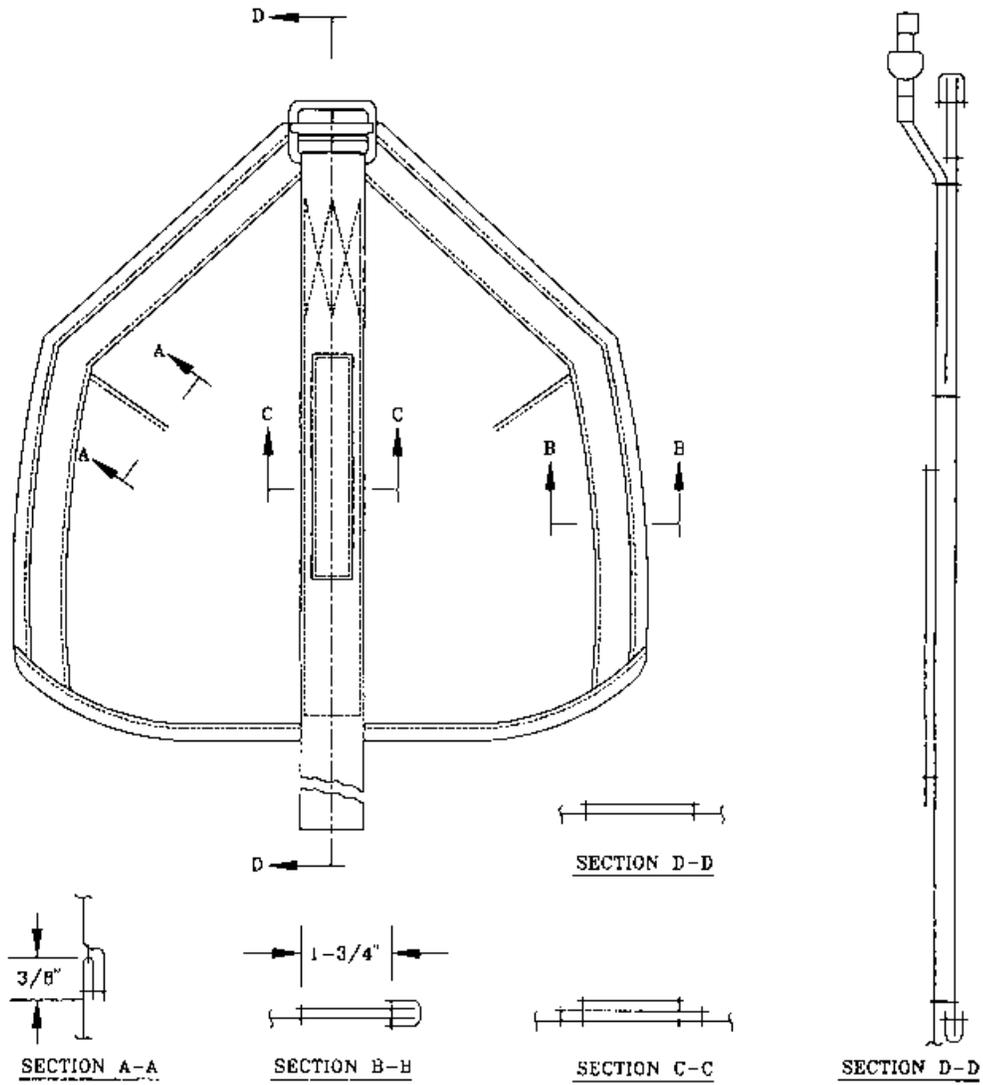

Fig. 29 (CONTAINER SIDE MOUNTED) LOWER CAP ASSEMBLY (SHEET 2 OF 2)

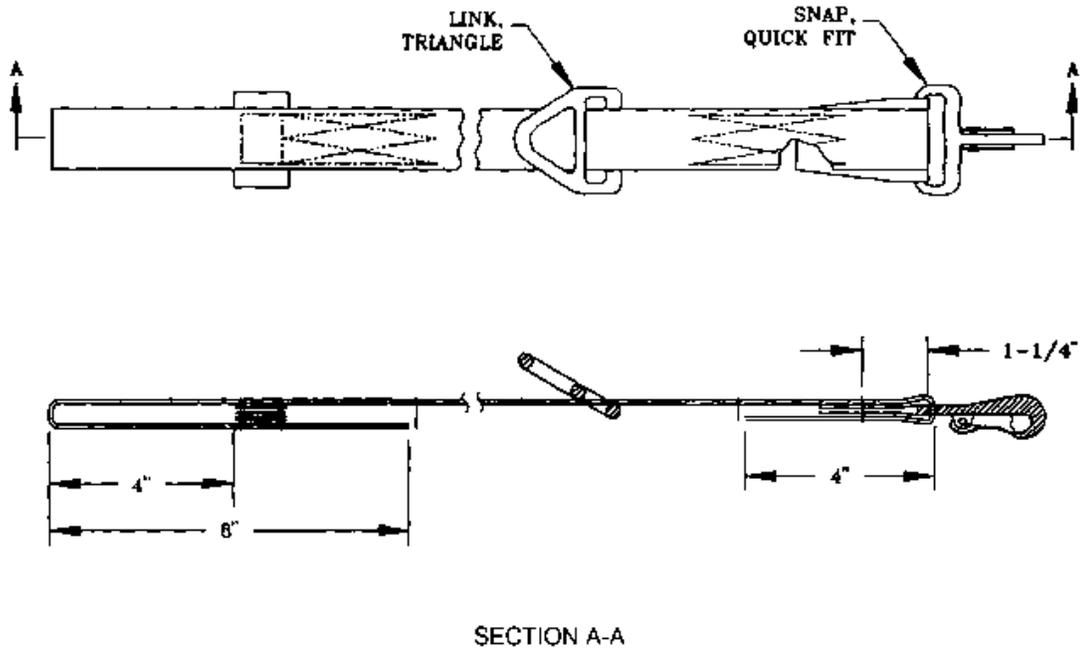

Fig. 30 (CONTAINER SIDE MOUNTED) LOWER LINE BRIDLE ASSEMBLY

PROCEDURE	MATERIALS	NOTE
1. FABRICATE LOWERING LINE BRIDLE ASSEMBLY AS SHOWN.	CLOTH, DUCK, TEXTURED VIII.	DIMENSIONS SHOWN ARE IN INCHES.
	THREAD, NYLON, SIZE 3, TYPE 301 STITCH, 5 TO 8 SPI	TOLERANCE IS 1/4-IN.

By Order of the Secretaries of the Army, Air Force and Navy (Including the Marine Corps):

PETER J. SCHOOMAKER
General, United States Army
Chief of Staff

Official:

JOEL B. HUDSON
Administrative Assistant to the
Secretary of the Army
0415601

MICHAEL E. RYAN
General, USAF
Chief of Staff

Official:

GEORGE T. BABBETT
General, USAF
Commander, Air Force Materiel Command

D.G. MORRAL
Rear Admiral, USN
Program Executive Officer
For Expeditionary Warfare
Naval Sea Systems Command

R.P. SHOCKEY
Director, Program Support
Marine Corps Systems Command

DISTRIBUTION:

To be distributed in accordance with Initial Distribution Number (IDN) 256295 requirements for TM 10-1670-299-20&P.

The Metric System and Equivalents

Linear Measure

1 centimeter = 10 millimeters = .39 inch
 1 decimeter = 10 centimeters = 3.94 inches
 1 meter = 10 decimeters = 39.37 inches
 1 dekameter = 10 meters = 32.8 feet
 1 hectometer = 10 dekameters = 328.08 feet
 1 kilometer = 10 hectometers = 3,280.8 feet

Weights

1 centigram = 10 milligrams = .15 grain
 1 decigram = 10 centigrams = 1.54 grains
 1 gram = 10 decigrams = .035 ounce
 1 dekagram = 10 grams = .35 ounce
 1 hectogram = 10 dekagrams = 3.52 ounces
 1 kilogram = 10 hectograms = 2.2 pounds
 1 quintal = 100 kilograms = 220.46 pounds
 1 metric ton = 10 quintals = 1.1 short tons

Liquid Measure

1 centiliter = 10 milliliters = .34 fl. ounce
 1 deciliter = 10 centiliters = 3.38 fl. ounces
 1 liter = 10 deciliters = 33.81 fl. ounces
 1 dekaliter = 10 liters = 2.64 gallons
 1 hectoliter = 10 dekaliters = 26.42 gallons
 1 kiloliter = 10 hectoliters = 264.18 gallons

Square Measure

1 sq. centimeter = 100 sq. millimeters = .155 sq. inch
 1 sq. decimeter = 100 sq. centimeters = 15.5 sq. inches
 1 sq. meter (centare) = 100 sq. decimeters = 10.76 sq. feet
 1 sq. dekameter (are) = 100 sq. meters = 1,076.4 sq. feet
 1 sq. hectometer (hectare) = 100 sq. dekameters = 2.47 acres
 1 sq. kilometer = 100 sq. hectometers = .386 sq. mile

Cubic Measure

1 cu. centimeter = 1000 cu. millimeters = .06 cu. inch
 1 cu. decimeter = 1000 cu. centimeters = 61.02 cu. inches
 1 cu. meter = 1000 cu. decimeters = 35.31 feet
