\*This manual supersedes TM 10-4510-207-14 dated 30 AUGUST 2000 and TM 10-4510-207-24P dated 31 JULY 2002, including all changes.

**DISTRIBUTION STATEMENT A** – Approved for public release, distribution is unlimited.

---

**HEADQUARTERS, DEPARTMENT OF THE ARMY**

**10 JUNE 2013**

## **WARNING SUMMARY**

The following safety and hazardous materials warnings appear throughout this manual. Review these warnings to ensure that you understand them and can apply them during operation and maintenance of the equipment. Failure to follow these warnings may result in serious injury or death to personnel.

## **FIRST AID**

First aid is the emergency care given to the sick, injured, or wounded before being treated by medical personnel. Refer to FM 4-25.11 for first aid treatment information.

## WARNING SUMMARY – (Continued)

### EXPLANATION OF SAFETY WARNING ICONS

**EAR PROTECTION** – Headphones over ears shows that noise level will harm ears.

**ELECTRICAL** – Electrical wire to hand with electricity symbol running through hand shows that shock hazard is present.

**ELECTRICAL** – Electrical wire to arm with electricity symbol running through human body shows that shock hazard is present.

**HEAVY OBJECT** – Heavy object on human figure shows that heavy parts present a danger to life or limb.

**HEAVY PARTS** – Human figure stooping over heavy object shows physical injury potential from improper lifting technique.

**FLYING PARTICLES** – Arrows bouncing off face shield show that particles flying through the air will harm face.

**FLYING PARTICLES** – Arrows bouncing off face show that particles flying through the air will harm face.

**SLIPPING** – Legs angled out and off the ground indicate a person slipping.

## WARNING SUMMARY – (Continued)

### SAFETY WARNINGS DESCRIPTION

#### WARNING

#### EAR PROTECTION

Hearing protection must be worn when using power equipment.

#### WARNING

#### ELECTRICAL

Never work on electrical equipment unless there is another person nearby who is familiar with the operation and hazards of the equipment and who is competent in administering first aid. When the technician is aided by operators, he must warn them about dangerous areas.

Never wear jewelry when working around electrical equipment.

Be careful not to contact high-voltage connections of 115-volt ac input connections when installing or operating this equipment.

Whenever the nature of the operation permits, keep one hand away from the equipment to reduce the hazard of current flowing through vital organs of the body.

Do not disconnect power cables when power is on or generator set is operating.

High voltage is used in the 12-head shower module. Care must be taken to avoid personal injury or death from energizing circuits.

Lights from the light set must be installed in the TEMPER. Never install lights anywhere directly on the 12-head shower facility.

Be sure that source power has been shut off before removing the power cable.

Failure to follow this warning may result in serious injury or death to personnel.

#### WARNING

#### HEAVY OBJECT

## WARNING SUMMARY – (Continued)

Be sure to use at least two operators to lift the shower bases, shower cabinet and shower frame. Failure to follow this warning may result in serious injury to personnel.

Be sure to use at least four operators to lift the pump assembly. Failure to follow this warning may result in serious injury to personnel.

Be sure to use at least six operators to lift the water heater. Failure to follow this warning may result in serious injury to personnel.

### WARNING HEAVY PARTS

The shower head manifold assembly will be loose when the U-bolts are removed. The manifold must be supported to prevent injury to personnel. Failure to follow this warning may result in serious injury to personnel.

### WARNING FLYING OBJECTS

Metal debris from drilling out rivets poses an eye hazard. Wear eye protection when removing and replacing rivets.

Flying debris from using wood fasteners can be an eye hazard. Wear eye protection when removing and replacing rivets.

Failure to comply with this warning can result in injury to personnel and damage to equipment.

### WARNING SLIPPING

Be careful when walking on wet surfaces. Wet surfaces can be slippery. Failure to heed this warning may result in injury to personnel.

Hoses will contain water. Care must be taken to contain spills and minimize the danger of slipping.

**WARNING SUMMARY – (Continued)**

**WARNING**

**MOVING PARTS**

Be careful when installing the shower frame legs onto the shower cabinet support poles not to put your fingers directly on the location where the frame legs and support posts join. Severely pinched fingers may result. Failure to follow this warning may cause injury to personnel.

## WARNING SUMMARY – (Continued)

### EXPLANATION OF HAZARDOUS MATERIALS ICONS

**EYE PROTECTION** – Person with goggles shows that the material can injure the eyes.

**FIRE** – Flames shows that a material may ignite and cause burns.

**VAPOR** – Human figure in a cloud shows that material vapors present a danger to life or health.

### HAZARDOUS MATERIALS WARNING DESCRIPTION

#### WARNING

#### FIRE

Adhesives and paint products are flammable. Keep away from heat and open flames. Use in a well-ventilated area. Failure to follow this warning may result in serious injury or death to personnel.

For immediate decontaminating procedures use **ONLY** hot soapy water for spot decontamination of Shower.

#### WARNING

#### VAPOR

Adhesives and paint products are potentially dangerous to personnel. Do not apply solvents or apply paint products in a closed room. Be sure there is good ventilation or the adhesive or paint vapors will build up in the air and become a poisonous mixture which can cause physical injury or even death.

Sealing compounds are potentially dangerous to personnel. Be sure there is good ventilation when applying sealing compound. Failure to adhere to this warning may cause injury or death to personnel.

#### WARNING

**WARNING SUMMARY – (Continued)**

**EYE PROTECTION**

Wear eye protection when applying adhesives or when painting. Failure to follow this warning may result in serious injury to personnel.

## LIST OF EFFECTIVE PAGES/WORK PACKAGES

**NOTE:** This manual supersedes TM 10-4510-207-14 dated 30 August 2000 and TM 10-7360-206-24P dated 31 July 2002. Zero in the "Change No." column indicates an original page or work package.  
10 June 2013

**REPORTING ERRORS AND RECOMMENDING IMPROVEMENTS**

You can help improve this publication. If you find any errors, or if you would like to recommend any improvements to the procedures in this publication, please let us know. The preferred method is to submit your DA Form 2028 (Recommended Changes to Publications and Blank Forms) through the Internet, on the TACOM Unique Logistics Support Applications (TULSA) Web site. The Internet address is <https://tulsa.tacom.army.mil>. Access to all applications requires CAC authentication, and you must complete the Access Request form the first time you use it. The DA Form 2028 is located under the TULSA Applications on the left-hand navigation bar. Fill out the form and click on SUBMIT. Using this form on the TULSA website will enable us to respond more quickly to your comments and better manage the DA Form 2028 program. You may also mail, e-mail, or fax your comments or DA Form 2028 directly to the U.S. Army TACOM Life Cycle Management Command. The postal mail address is U.S. Army TACOM Life Cycle Management Command, ATTN: AMSTA-LCL-MPP / TECH PUBS, 6501 E. 11 Mile Road, Warren, MI 48397-5000. The e-mail address is [tacomlcmc.daform2028@us.army.mil](mailto:tacomlcmc.daform2028@us.army.mil). The fax number is DSN 786-1856 or Commercial (586) 282-1856. A reply will be furnished to you.

**CURRENT AS OF 15 JANUARY 2013**

\*This manual supersedes TM 10-4510-207-14 dated 30 August 2000 and TM 10-4510-207-24P dated July 2002, including all changes.

**DISTRIBUTION STATEMENT A** – Approved for public release, distribution is unlimited.

## HOW TO USE THIS MANUAL

### INTRODUCTION

#### HOW TO OBTAIN TECHNICAL MANUALS

When a new system is introduced to the Army inventory, it is the responsibility of the receiving units to notify and inform the unit publications clerk that a technical manual is available for the new system. Throughout the life cycle of the new system, the publications proponent will also provide updates and changes to the technical manual.

To receive new technical manuals or change packages to fielded technical manuals, provide the unit publications clerk the full technical manual number, title, date of publication, and number of copies required. The unit publications clerk will then justify the request through the unit publications officer. When the request is approved, DA Form 12-R is used to order the technical manual from the Army Publishing Directorate (APD).

#### Instructions for Unit Publications Clerk

Obtain the form and request a publications account from the APD Web site at <http://www.apd.army.mil>. Once on the Web site, click on the "Orders/Subscriptions/Reports" tab. From the drop-down menu, select "Establish an Account," then select "Tutorial," and follow the instructions in the tutorial presentation.

Complete information for obtaining Army publications can be found in DA PAM 25-33.

#### ORGANIZATION OF THIS MANUAL

In this manual, primary chapters appear in uppercase/capital letters; work packages are presented in numeric sequence, e.g., 0001, 0002; paragraphs within a work package are not numbered and are presented in a titled format. For a first level paragraph, titles are in all uppercase/capital letters, e.g., FRONT MATTER. Subordinate paragraph titles will have the first letter of the first word of each principle word all uppercase/capital letters, e.g., Manual Organization and Page Numbering System. The location of additional material that must be referenced is clearly marked. Illustrations supporting maintenance procedures/text are located underneath, or as close as possible to, their referenced paragraph.

FRONT MATTER. Front matter consists of front cover, warning summary, title block, table of contents, and how to use this manual page.

CHAPTER 1 – GENERAL INFORMATION, EQUIPMENT DESCRIPTION, AND THEORY OF OPERATION. Chapter 1 contains introductory information on the shower and its associated equipment as well as theory of operation.

CHAPTER 2 – OPERATOR INSTRUCTIONS. Chapter 2 provides operator instructions required for use of the shower by the operator, including description and use of controls and indicators, operational deployment cycles, and cleaning.

CHAPTER 3 – TROUBLESHOOTING. Chapter 3 provides a troubleshooting index and operator and field troubleshooting procedures.

CHAPTER 4 – PREVENTIVE MAINTENANCE INSTRUCTIONS. Chapter 4 provides Preventative Maintenance Checks and Services (PMCS) instructions authorized at the operator and field maintenance levels.

CHAPTER 5 – OPERATOR MAINTENANCE INSTRUCTIONS. Chapter 5 provides maintenance procedures authorized at the operator level that includes service upon receipt, cleaning and replacement procedures.

CHAPTER 6 – FIELD MAINTENANCE INSTRUCTIONS. Chapter 6 provides maintenance procedures authorized at the maintainer level that includes repair and replacement of key components.

CHAPTER 7 – PARTS INFORMATION. Chapter 7 provides Repair Parts and Special Tools List (RPSTL) information, including authorized repair parts, special tools, special test, measurement, and diagnostic equipment (TMDE), and other special support equipment required for performance of operator and field maintenance of the shower. This chapter also contains national stock number and part number cross reference tables.

CHAPTER 8 – SUPPORTING INFORMATION. Chapter 8 provides supporting information that includes the document reference table, the Maintenance Allocation Chart, tools list, remarks, Components of End Item List, Basic Issue Items List, Additional Authorization List, the Expendable/Durable Suppliers and Material List, and the Mandatory Replacement Parts List.

REAR MATTER. Rear matter consists of alphabetical index, DA Form 2028, authentication page, and back cover.

## HOW TO USE THIS MANUAL – (Continued)

### Manual Organization and Page Numbering System

The manual is divided into eight chapters that detail the topics mentioned above. Within each chapter are work packages covering a wide range of topics. Each work package is numbered sequentially starting at page 1. The work package has its own page-numbering scheme and is independent of the page numbering used by other work packages. Each page of a work package has a page number of the form XXXX-YY where XXXX is the work package number (e.g., 0010 is work package 10) and YY represents the number of the page within that work package. A page number such as 0010-1/blank means that page 1 contains information, but page 2 of that work package has been intentionally left blank.

### Finding Information

The table of contents permits the reader to find information in the manual quickly. The reader should start here first when looking for a specific topic. The table of contents lists the topics, figures, and tables contained within each chapter and the work package sequence number where it can be found.

Example: If the reader were looking for instructions on Operating Under Usual Conditions, the table of contents indicates that information can be found in Chapter 2. Scanning down the listings for Chapter 2, information on how to operate the shower can be found in WP 0005, Operation Under Usual Conditions (i.e., work package 5). An alphabetical index can be found at the back of the manual; specific topics are listed with the corresponding work package number.vii

**CHAPTER 1**  
**GENERAL INFORMATION, EQUIPMENT DESCRIPTION AND THEORY OF**  
**OPERATION**  
**FOR**  
**12-HEAD SHOWER SYSTEM**

---

**OPERATOR INSTRUCTIONS****GENERAL INFORMATION**

---

**SCOPE**

This manual covers operator and field maintenance instructions of the 12-head shower system, shown in Figure 1. The 12-head shower system provides six two-person shower stalls for field personnel.

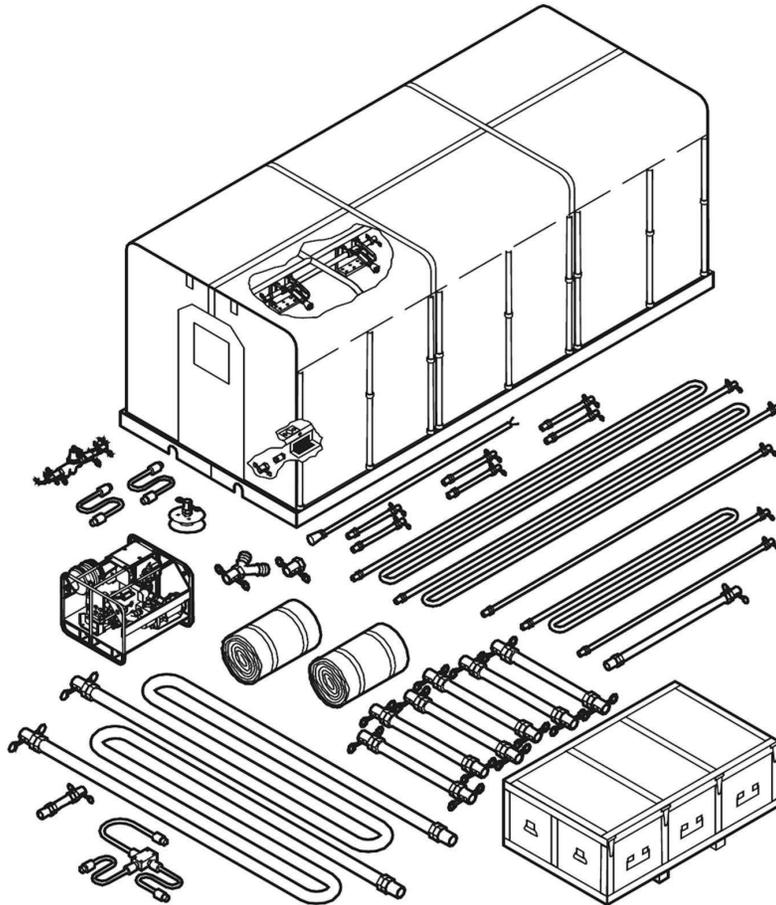

Figure 1. Shower and Associated Components.

---

**GENERAL INFORMATION - (CONTINUED)**

The manual also contains a RPSTL that lists and authorizes spare and repair parts, special tools, special tests, measurement, and diagnostic equipment (TMDE), and other special support equipment required for performance of operator and field maintenance of the shower. It authorizes the requisitioning, issue, and disposition of spare and repair parts and special tools as indicated by the source, maintenance, and recoverability (SMR) codes.

**Type of Manual**

Operator and Field Maintenance Manual including Repair Parts and Special Tools List for 12-Head Shower Module.

**Purpose of Equipment**

The shower provides six two-person shower stalls for field personnel.

**MAINTENANCE FORMS, RECORDS, AND REPORTS**

Department of the Army forms and procedures used for equipment maintenance will be those prescribed by (as applicable) DA PAM 750-8, The Army Maintenance Management System (TAMMS) Users Manual; DA PAM 738-751, Functional Users Manual for the Army Maintenance Management Systems - Aviation (TAMMS-A); or AR 700-138, Army Logistics Readiness and Sustainability.

**REPORTING EQUIPMENT IMPROVEMENT RECOMMENDATIONS (EIR)**

If your shower needs improvement, let us know. Send us an EIR. You, the user, are the only one who can tell us what you don't like about your equipment. Let us know why you don't like the design or performance. If you have Internet access, the easiest and fastest way to report problems or suggestions is to go to <https://aeps.ria.army.mil/aepspublic.cfm> (scroll down and choose the "Submit Quality Deficiency Report" bar). The Internet form lets you choose to submit an Equipment Improvement Recommendation (EIR), a Product Quality Deficiency Report (PQDR), or a Warranty Claim Action (WCA). You may also submit your information using an SF 368 (Product Quality Deficiency Report). You can send your SF 368 via e-mail, regular mail, or facsimile using the addresses/facsimile numbers specified in DA PAM 750-8, The Army Maintenance Management System (TAMMS) Users Manual. We will send you a reply.

**CORROSION PREVENTION AND CONTROL (CPC)**

Corrosion Prevention and Control (CPC) of Army material is a continuing concern. It is important that any corrosion problems with this item be reported so that the problem can be corrected and improvements can be made to prevent the problem in future items.

Corrosion specifically occurs with metals. It is an electrochemical process that causes the degradation of metals. It is commonly caused by exposure to moisture, acids, bases, or salts. An example is the rusting of iron. Corrosion damage in metals can be seen, depending on the metal, as tarnishing, pitting, fogging, surface residue, and/or cracking.

Plastics, composites, and rubbers can also degrade. Degradation is caused by thermal (heat), oxidation (oxygen), solvation (solvents), or photolytic (light, typically UV) processes. The most common exposures are excessive heat or light. Damage from these processes will appear as cracking, softening, swelling, and/or breaking.

SF Form 368, Product Quality Deficiency Report should be submitted to the address specified in DA PAM 750-8, The Army Maintenance Management System (TAMMS) Users Manual.

**OZONE DEPLETING SUBSTANCES**

There are no Ozone Depleting Substances in the 12-Head Shower.

**DESTRUCTION OF MATERIEL**

Destruction of Army materiel to prevent enemy use shall be in accordance with TM 750-244-3.

**PREPARATION FOR STORAGE OR SHIPMENT**

Prepare the equipment for storage or shipment as described in WP 0019.

**GENERAL INFORMATION - (CONTINUED)****WARRANTY INFORMATION**

The 12-head shower is warranted for 365 days from the date of shipment. Report all defects in material or workmanship to your supervisor who will take appropriate action.

**NOMENCLATURE CROSS-REFERENCE LIST**

Following is a cross reference of official names and nomenclature.

**Table 1. Nomenclature Cross-Reference List**

**SAFETY, CARE AND HANDLING, WARNINGS, CAUTIONS AND NOTES**

Always pay attention to warnings, cautions, and notes appearing throughout the manual. They will appear prior to applicable procedures. Ensure you read and understand their content to prevent serious injury to yourself and others or damage to equipment.

**COMMON TOOLS AND EQUIPMENT**

For authorized common tools and equipment, refer to the Modified Table of Organization and Equipment (MTOE), CTA 50-970, Expendable/Durable Items (Except: Medical, Class V, Repair Parts, and Heraldic Items), or CTA 8-100, Army Medical Department Expendable/Durable Items, as applicable to your unit.

Repair parts are listed and illustrated in WP 0045.

All special tools, TMDE, and support equipment for the shower are listed in Chapter 7.

**END OF WORK PACKAGE**

---

## OPERATOR INSTRUCTIONS

### EQUIPMENT DESCRIPTION AND DATA

---

#### EQUIPMENT CHARACTERISTICS, CAPABILITIES AND FEATURES

The shower is made up of six two-person shower stalls. Each shower stall is made up of a base and frame to support the soft-sided shower cabinet. Shower heads and hard, plastic separators are attached to the frame. The six shower stalls are joined to make a 12 person walk-through shower facility. Shower cabinet door panels, secured using hook and loop strips, are provided on the two open ends of the facility.

Water is supplied to the shower through a water supply, using a water supply pump to draw water from a clean closed or open water supply source. Water is drained from the shower using a reciprocating pump that draws water from the shower bases to a water discharge site. These two pumps are housed within a single pump assembly.

Typical installation of the 12-head shower module is inside a TEMPER tent. Heated water for the 12-head shower module is provided by a portable hot water system.

The 12-head shower is typically used in environments where the ambient air temperature is above 32° Fahrenheit (0° Celsius). The shower cannot be used in environments where the temperature is below 32 °F (0 °C) without taking special precautions to prevent damage to the equipment.

#### CHARACTERISTICS

The shower is a portable shower designed to be used in environments where ambient air temperature is above 32 °F (0 °C). A portable hot water system provides heated water to the shower heads. An electric supply pump is used to supply the shower with water. An electric reciprocating pump is used to drain the water.

#### CAPABILITIES

With an unlimited water supply and continuous operation of the WH-400 water heater, the 12-head shower can provide 7 minute showers for 500 people in a 24-hour period. It can also produce 9 gallons of water per minute heated to between 100 °F (37 °C) and 210 °F (98 °C).

#### Features

The 12-head shower houses six two-person shower stalls. Typical installation of the shower is inside a TEMPER tent. The temperature of the water is controlled by a temperature regulator that normally keeps the temperature between 95 °F (35 °C) and 105 °F (40 °C).

#### LOCATION AND DESCRIPTION OF MAJOR COMPONENTS

The following are the major components of the shower. A brief description of the function of each component and its location is detailed below. Each of the components are illustrated in Figure 1.

##### Shower Cabinet

There are six two-person canvas shower cabinets. These cabinets are joined together to make up the 12 person walk-through shower facility.

##### Pump Assembly

The pump assembly consists of the pump frame, diaphragm tank, supply pump, reciprocating pump, temperature regulator, and the electrical switch box.

The supply pump draws cold water from a clean, open or closed, water source, supplying cold water to the cold water side of the temperature regulator and to the inlet side of the hot water heater (e.g., WH-400). Cold water is provided to the temperature regulator through a direct connection from within the pump assembly. Cold water to the water heater is provided by a hose connection from the outlet side of the supply pump.

The reciprocating pump draws waste water away from the shower to a waste water disposal facility.

EQUIPMENT DESCRIPTION AND DATA - (CONTINUED)

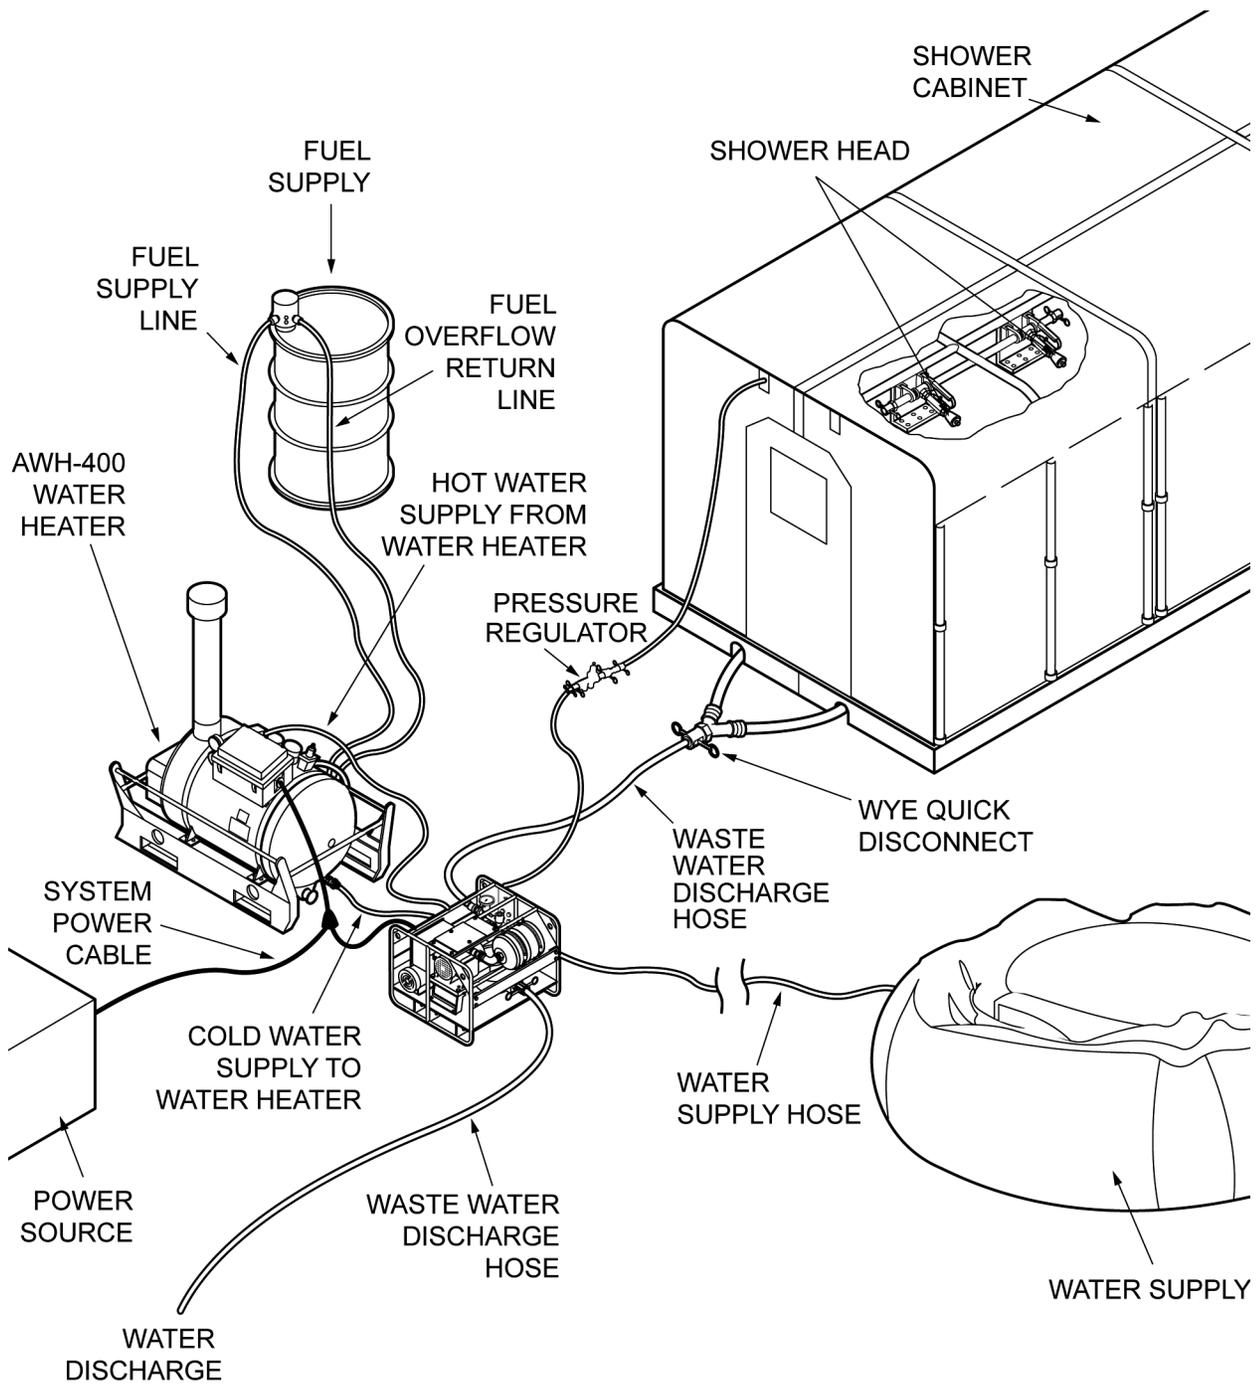

Figure 1. 12-Head Shower System Major Components (Sheet 1 of 3).

EQUIPMENT DESCRIPTION AND DATA - (CONTINUED)

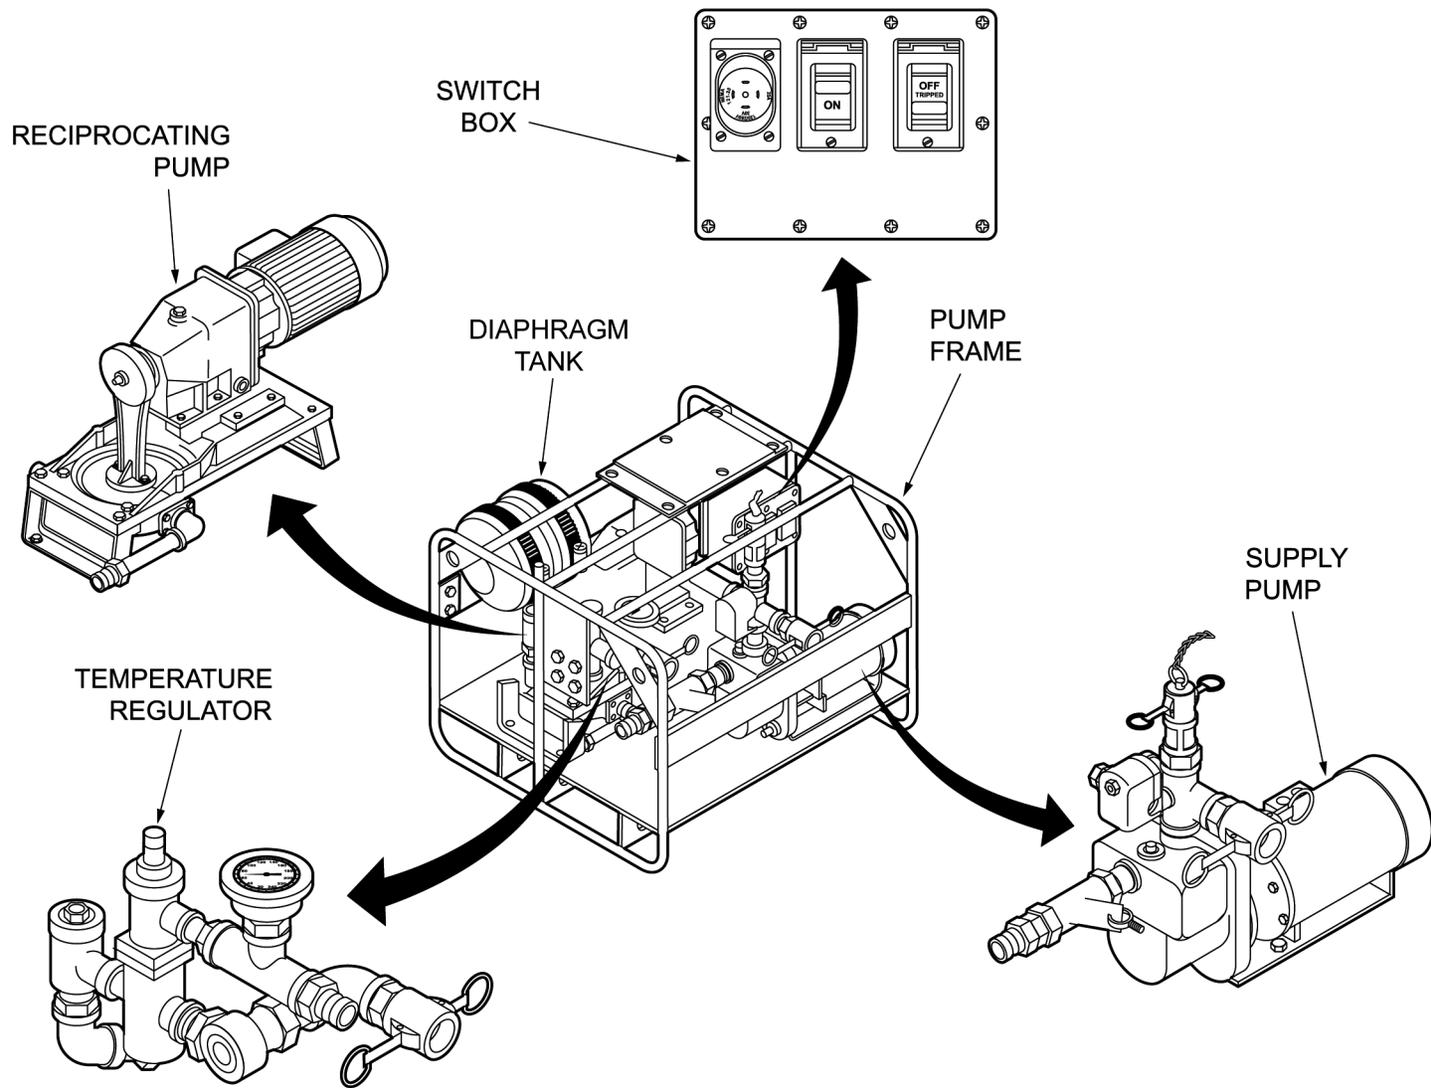

Figure 1. 12-Head Shower System Major Components (Sheet 2 of 3).

## EQUIPMENT DESCRIPTION AND DATA - (CONTINUED)

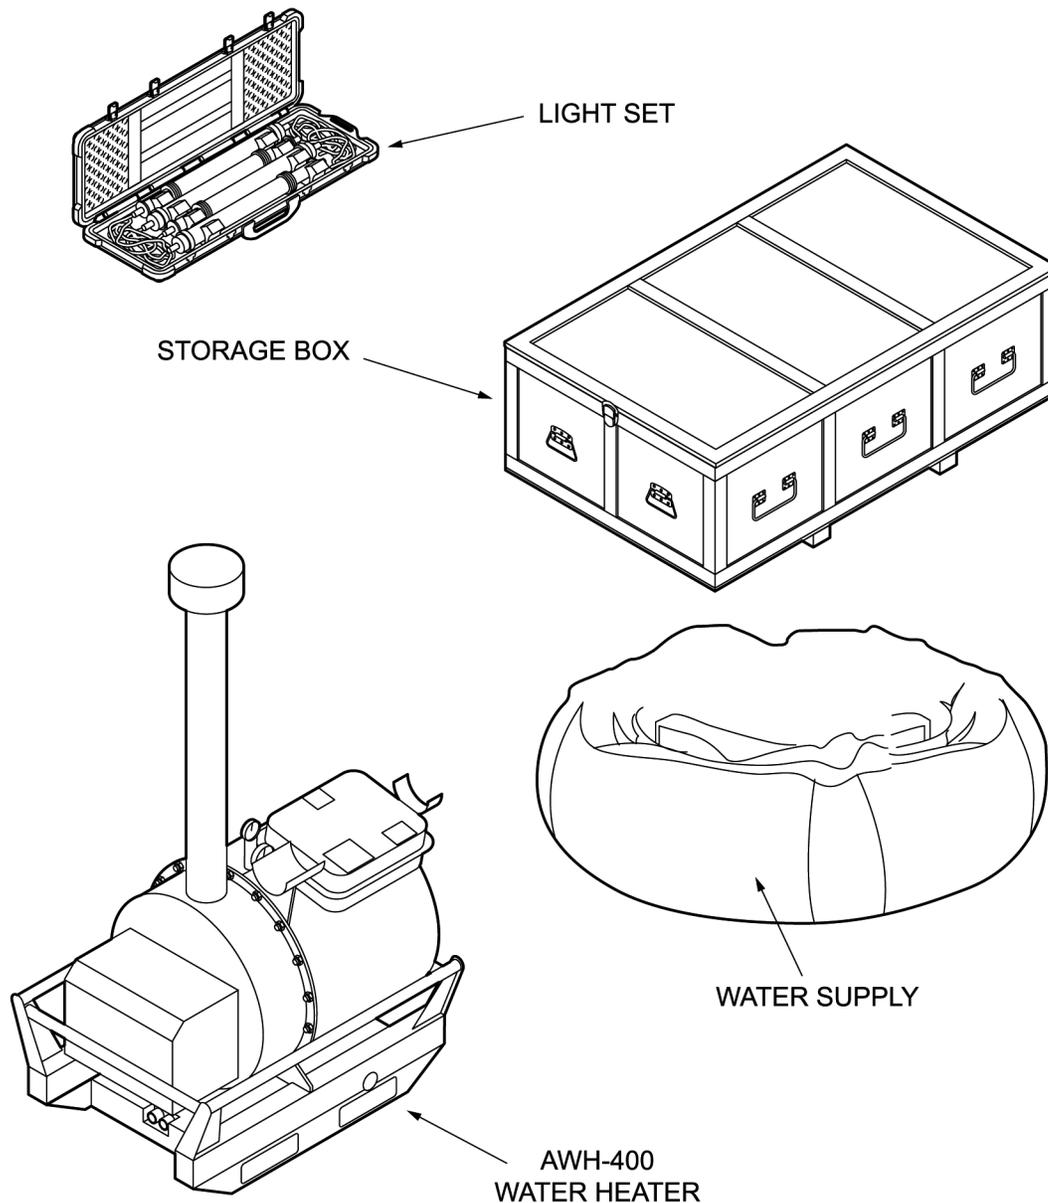

Figure 1. 12-Head Shower System Major Components (Sheet 3 of 3).

**Water Heater**

The WH-400 water heater delivers heated water at a rate of 9 gallons per minute at temperatures between 60 °F (16 °C) and 190 °F (88 °C). For additional information about the WH-400 water heater, refer to TM 10-4520-266-13&P.

**Temperature Regulator**

The adjustable temperature regulator is used to control the water temperature within the shower. The water temperature is monitored through the use of a temperature gauge attached to the regulator.

**Switch Box**

The switch box is attached to the water pump assembly frame. The switch box contains a 120/280 V power receptacle, the supply pump on and off switch, and the reciprocating pump on and off switch. The power switches

---

**EQUIPMENT DESCRIPTION AND DATA - (CONTINUED)**

for the supply pump and reciprocating pump have trip capabilities to provide overload protection to the pump motors.

**Regulator Valve**

The regulator valve is an in-line valve that uses an adjustable flow meter to control the water pressure being supplied to the shower.

**Power Cable Assemblies**

Two power cable assemblies are used for the shower, an input power cable assembly and a system power cable assembly. The input power cable assembly provides power from the source power supply to the system power cable assembly. The system power cable assembly distributes power through the system switch box to the supply pump and reciprocating pump.

**Check Valve**

The check valve is an in-line valve used to maintain water flow in a single direction. It prevents water in the hose from flowing back into the water source when the supply pump is off.

**Suction Strainer**

The suction strainer is an in-line filter used to filter debris when water is being drawn from an open source water supply (e.g., pond or lake).

**Hoses and Fittings**

Water flows to, from, and within the shower through a series of non-metallic hoses that are connected together by quick-disconnect fittings.

**WYE Quick Disconnect Fitting**

The WYE quick-disconnect fitting allows an operator to easily connect or disconnect the waste water hose from the shower.

**Storage Container**

The storage container, constructed of wood, is used to pack the shower components for storage or shipment.

**Light Set**

The light set is designed to be used when the shower is housed inside a TEMPER and provides general illumination for the shower. The light set consists of four EMI hardened stringable lights, two replacement bulb kits and four 130-inch horizontal anchor straps with mounted vertical straps for hanging and placement.

**EQUIPMENT DESCRIPTION AND DATA - (CONTINUED)**

**EQUIPMENT DATA**

The following technical and identification data (Table 1) pertains to selected components of the shower. Refer to the shower identification plate (Figure 2) located on the top of the pump frame assembly for additional information.

**Equipment Specification Data**

**Table 1. Components, Dimensions, and Weights**

<b>Overall Shower Cabinet Dimensions</b>

EQUIPMENT DESCRIPTION AND DATA - (CONTINUED)

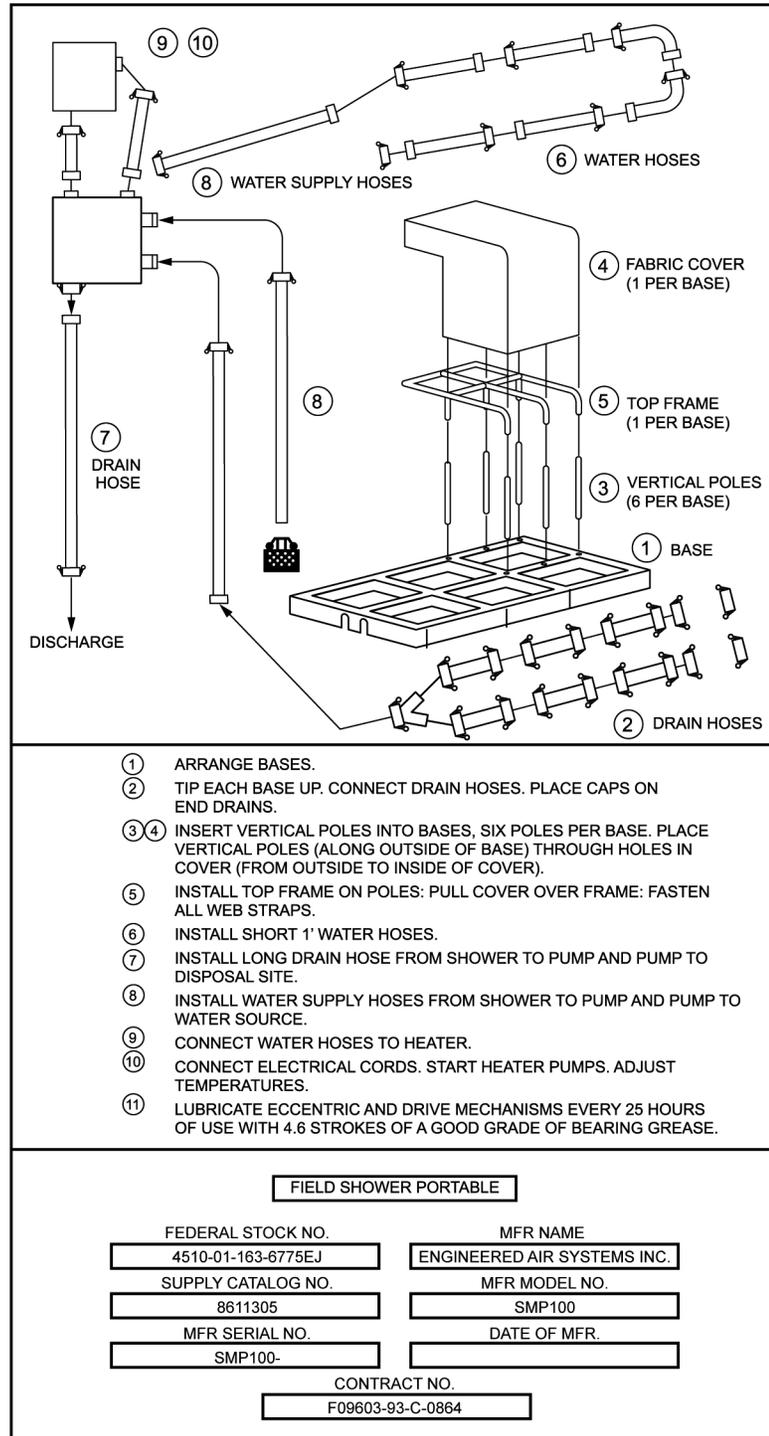

Figure 2. Shower Identification Plate.

END OF WORK PACKAGE

---

## OPERATOR INSTRUCTIONS

### THEORY OF OPERATION

---

#### SUPPLY PUMP

The supply pump draws water from a clean, open or closed water source, supplying cold water through a direct connection from within the pump assembly to the temperature regulator, and to the inlet side of the hot water heater (e.g., WH-400) by a hose connection from the outlet side of the supply pump. (Figure 1). A diaphragm tank is used to maintain constant pressure on the system, preventing excessive pump wear from short cycling.

#### WATER HEATER (e.g., WH-400)

The water heater used for the shower is an WH-400 field water heater. The WH-400 is capable of supplying heated water at 9 gallons per minute at temperatures between 60 °F (16 °C) and 190 °F (88 °C). Once heated, hot water is then supplied to the hot water inlet of the temperature regulator.

#### TEMPERATURE REGULATOR

Supply water temperature is regulated between 95 °F (35 °C) and 105 °F (41 °C) by mixing the cold water from the supply pump with the hot water from the hot water heater. The temperature regulator manual adjustment knob is used to control the mixing of the hot and cold water to provide the desired water temperature to the shower heads.

#### PRESSURE REGULATOR

The pressure regulator is connected to the water supply hose between the outlet side of the temperature regulator and the shower heads. The pressure regulator can be manually adjusted to provide the desired water pressure to the shower.

#### SHOWER HEAD

Two different shower heads that can be used to provide either a fixed position spray or a swivel type directional spray.

#### RECIPROCATING PUMP

The reciprocating pump draws drain water from the base of the shower and discharges it through hoses to a greywater holding tank or processing facility.

THEORY OF OPERATION - (CONTINUED)

SHOWER WATER FLOW SCHEMATIC

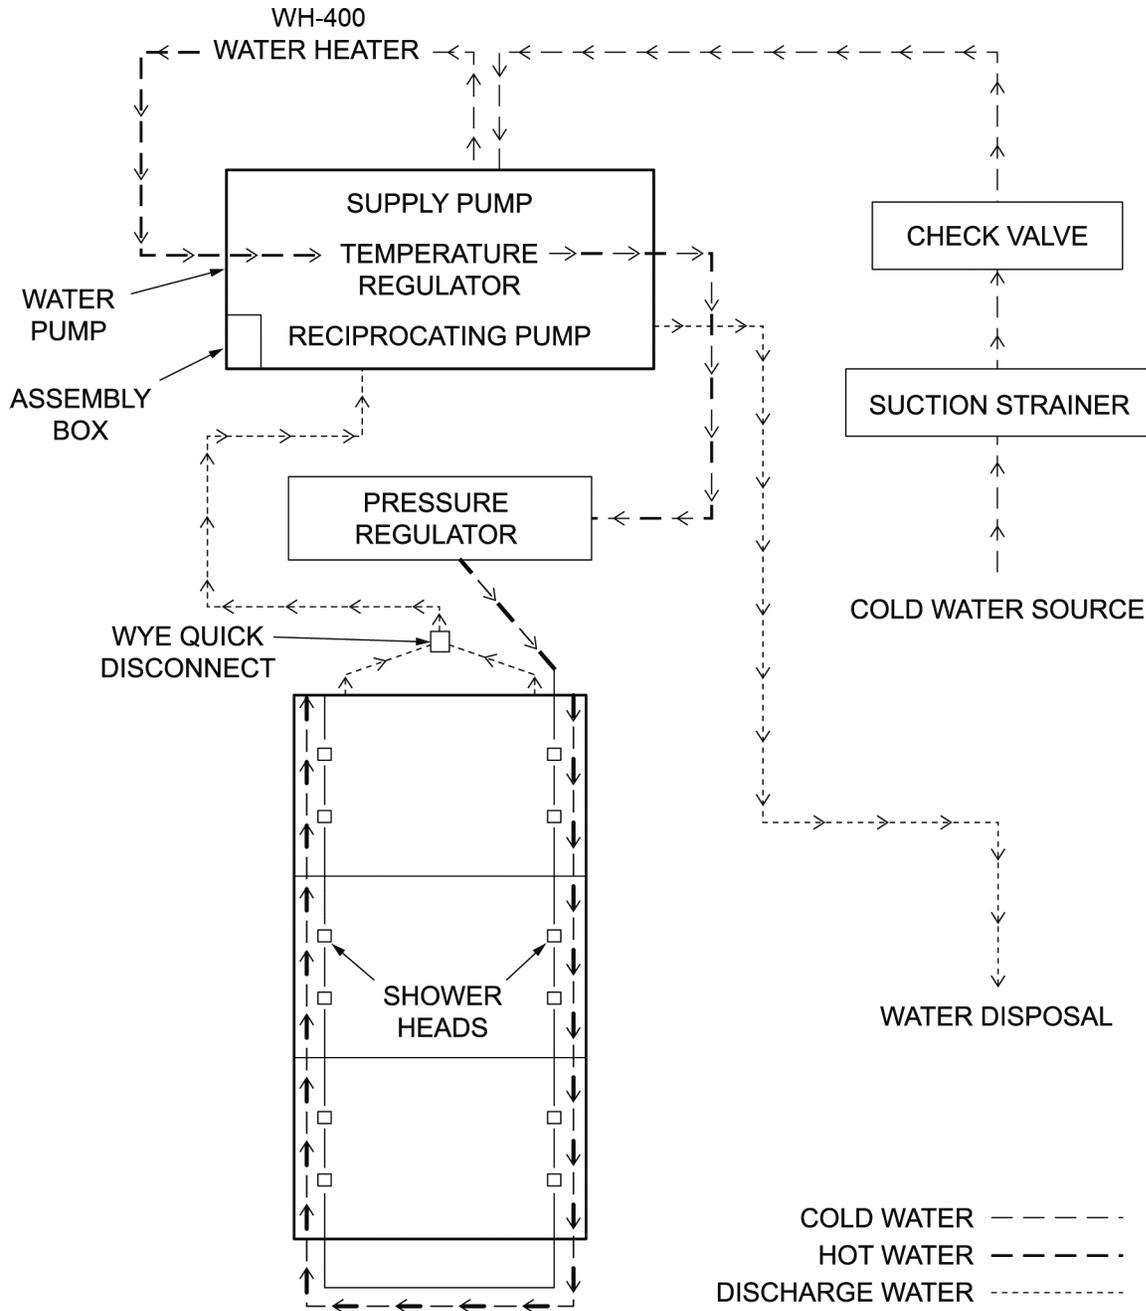

Figure 1. Shower Water Flow Schematic.

END OF WORK PACKAGE

**CHAPTER 2**  
**OPERATOR INSTRUCTIONS**  
**FOR**  
**12-HEAD SHOWER SYSTEM**

**OPERATOR INSTRUCTIONS**

**DESCRIPTION AND USE OF OPERATOR CONTROLS AND INDICATORS**

**DESCRIPTION AND USE OF OPERATOR CONTROLS AND INDICATORS**

Figure 1 and the associated table show the location of the controls and indicators and identifies the function of each component.

**Table 1. Pump Assembly Controls And Indicators**

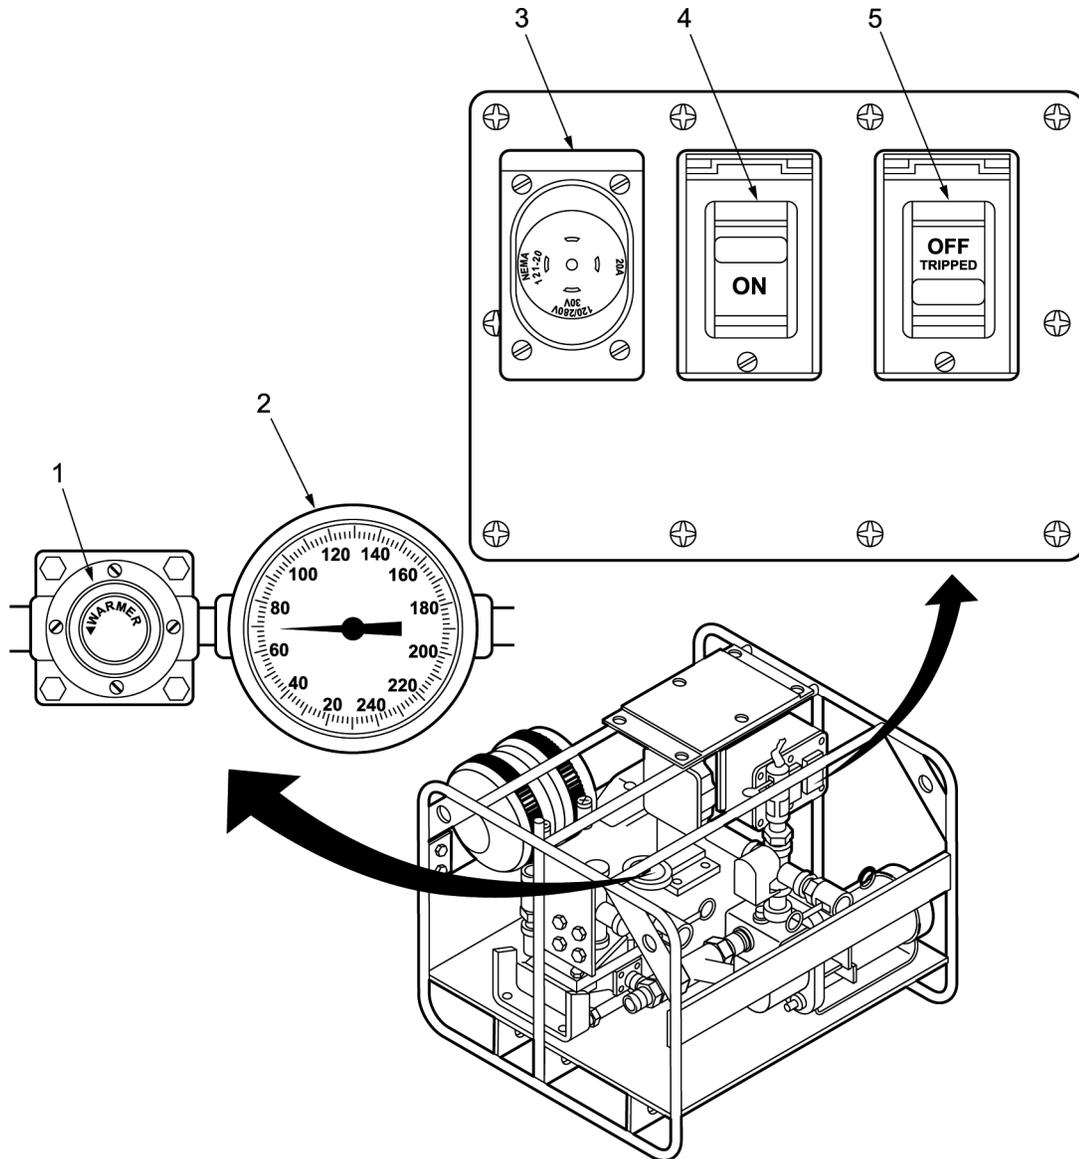

Figure 1. Pump Assembly Operating Controls and Indicators.

## DESCRIPTION AND USE OF OPERATOR CONTROLS AND INDICATORS - (CONTINUED)

KEY	CONTROL/INDICATOR	FUNCTION
1	Temperature Regulator	The temperature regulator has a manually adjusted control knob that can be set to deliver the desired water temperature to the shower stall. Turning the control knob counterclockwise increases the delivered water temperature and clockwise decreases it.
2	Temperature Gauge	The temperature regulator temperature gauge indicates the water temperature being sent to the shower stall. Monitor this indicator whenever adjusting the temperature regulator.
3	Power Receptacle	The power receptacle provides a 120/280 V power source.
4	Supply Pump Switch	The supply pump switch controls power to the supply pump as well as overload protection for the motor. Place the switch in the ON position for operation and the OFF position when not in use. If the motor overloads, the switch will move to a midway TRIPPED position and power will be interrupted. If the switch is in the TRIPPED position, it must be switched to OFF then ON to reset it.
5	Reciprocating Pump Switch	The reciprocating pump switch controls power to the reciprocating pump as well as providing overload protection for the motor. Place the switch in the ON position to operate and in the OFF position when not in use. If the motor overloads, the switch will move to a midway TRIPPED position and power will be interrupted. If the switch is in the TRIPPED position, it must be switched to OFF then ON to reset it.

---

## OPERATOR INSTRUCTIONS

### OPERATION UNDER USUAL CONDITIONS

---

**INITIAL SETUP:****Tools and Special Tools**

Tool Set, General Mechanics (WP 0051, Table 2, Item 5)

Shower/Laundry and Clothing Repair Specialist, (92S) - 6

**Personnel Required**

Quartermaster and Chemical Equipment Repairer, (91J) - 1

**References**

TM 10-4520-266-13&P  
TM 10-8340-244-13&P  
WP 0008

---

**GENERAL INFORMATION**

This work package provides instructions for shower siting, assembly, operation, and shutdown. The instructions in this section are for personnel who operate the shower.

**SITING REQUIREMENTS**

The following should be considered when selecting a site for the 12-head shower. Carefully review these assembly requirements to determine the optimum location.

If possible, find a location where the shower can be set up next to a natural slope to allow water to flow away from the shower.

The 12-head shower should be assembled on an area that is level and as well-drained as possible. If possible, select a site where there is a gravel pad measuring 30 ft by 90 ft on which to set up the 12-head shower bases.

The site must have overhead clearance higher than a TEMPER tent, Type II (10 x 16 x 32 feet).

The distance from the shower to a clean, potable water supply is determined by the length of the supply hose, about 50 ft. A closed water source is preferable if available, such as a 3K bag.

The shower must be near an electrical power source and wastewater disposal site. If these items are not available, they must be provided before the shower is assembled.

**END OF TASK****ASSEMBLY AND PREPARATION FOR USE****NOTE**

The following is a suggested layout of supplied components and may differ from that required for any specific installation.

The 12-head shower is shipped disassembled with parts in six storage containers. Table 1 lists the contents of each container. The pump assembly, 3K bag, and water heater are the only items packed separately.

Refer to Figure 1 and Table 1 as references when assembling the 12-head shower cabinets.

OPERATION UNDER USUAL CONDITIONS - (CONTINUED)

**Unpacking the Shower**

1. To aid in assembly, remove components from the storage containers (Table 1), lay them out, and organize them by size and length similar to the way pictured in Figure 2. Be sure to place components away from the area where the shower will be assembled.
2. Place any packaging material into the storage containers, then move the containers to a suitable storage site.

**OPERATION UNDER USUAL CONDITIONS - (CONTINUED)**

Figure 2. Shower Frames, Unloaded.

**END OF TASK****ASSEMBLING THE SHOWER FACILITY****WARNING**

Be sure to use at least two operators to lift the shower bases. Failure to follow this warning may result in serious injury to personnel.

**NOTE**

If the shower is to be installed inside a TEMPER tent, the TEMPER must be set up first.

1. If the shower is going to be housed inside a TEMPER tent, set up the TEMPER in accordance with the operator instruction in the TEMPER operators manual. Set the TEMPER up before assembling the 12-head shower.
2. Using two operators, move the shower bases to the location where the shower will be installed.
3. Set each of the bases on its side, arranged as shown in Figure 3 so that the drain hose assemblies can be easily installed. Be sure that the connections for the drain hose assemblies are facing out and that the drain hose connections are on the side closest to the ground (Figure 3).

## OPERATION UNDER USUAL CONDITIONS - (CONTINUED)

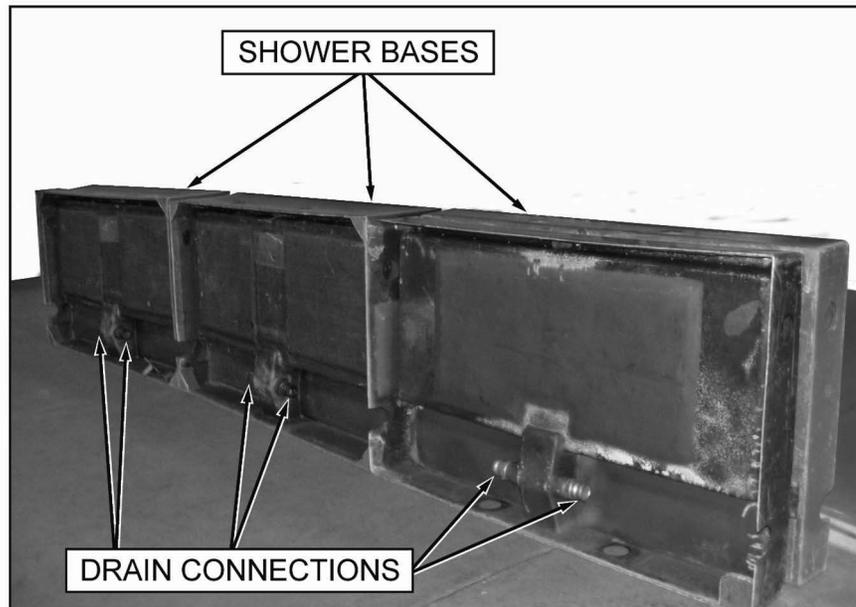

Figure 3. Positioning the Shower Bases.

4. If not already installed, install two drain caps (Figure 4) onto the end of the drain assemblies that are at the opposite end of where the shower pump assembly will be located. This will prevent water from flowing out of the entrance side of the shower.
5. Install six 2-inch diameter by 5 foot long drain hoses (Figure 4), so that the two drain hoses on the pump assembly side of the shower extend beyond the shower bases (Figure 4).

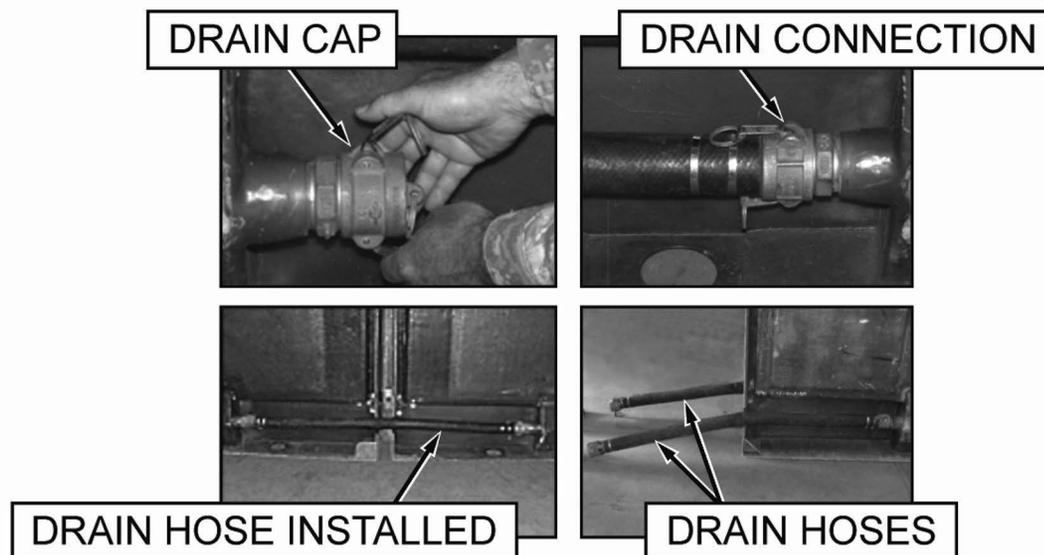

Figure 4. Installing Drain Hose Assemblies.

**OPERATION UNDER USUAL CONDITIONS - (CONTINUED)****CAUTION**

Be sure that all drain assemblies are properly connected. A loose connection could cause the drain hose connector to press against the shower base and cause damage.

Laying out the shower bases requires six operators.

6. Inspect each drain assembly connection to make sure that all drain assemblies are properly connected.
7. With one operator on the drain side of each shower base, carefully and at the same time lower the six shower bases to the ground. Push bases together into final position as shown in (Figure 5).

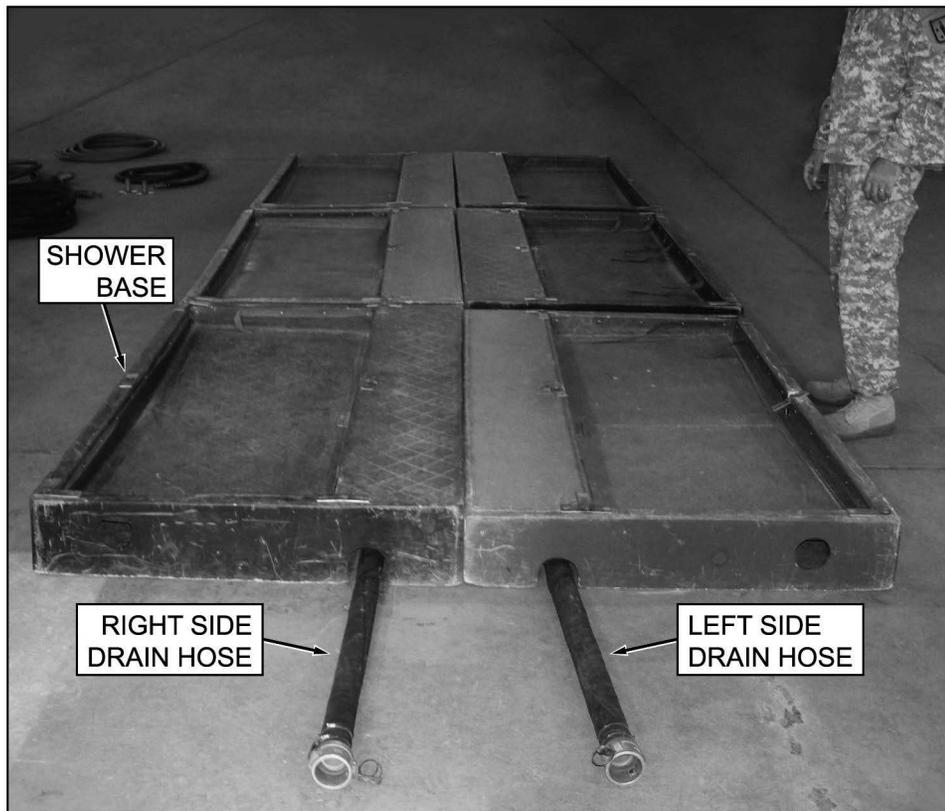

Figure 5. Shower Base Layout.

8. Install the three floor panels along the center shower walkway and secure them to the shower bases using attached hook and loop strips.
9. Install five shower cabinet support poles into shower base (Figure 6). Do not install the outer center shower cabinet support pole at this time (Figure 6).

## OPERATION UNDER USUAL CONDITIONS - (CONTINUED)

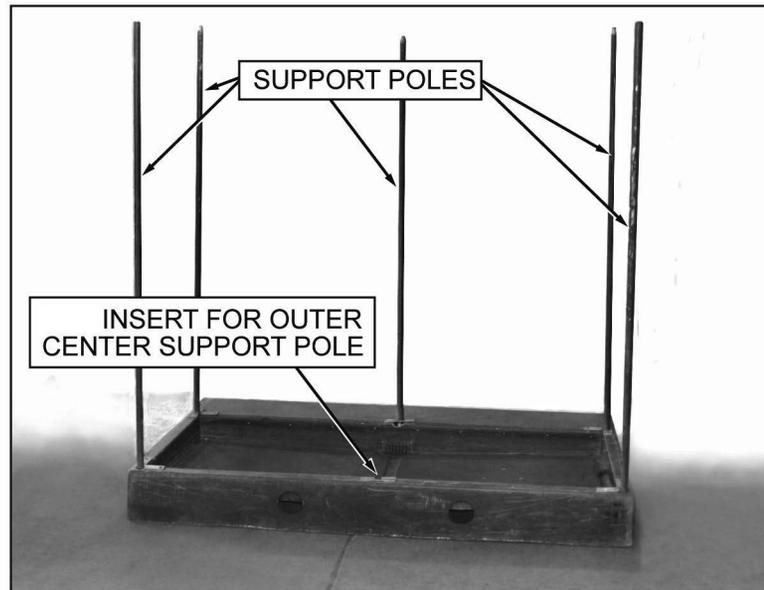

Figure 6. Installing Shower Cabinet Support Poles.

10. Lay the shower cabinet on the ground with the outside of the cabinet facing down (Figure 7).
11. Position the shower frame on the shower cabinet (opposite side of where the shower head is installed) and carefully guide the three outer legs through openings in back of shower cabinet (Figure 7).
12. Pull the shower frame up as shown in (Figure 7) and pull the shower cabinet skirt up so that the cabinet hook and loop strip that runs along the length of the cabinet skirt is above the height of the frame.
13. Attach the hook and loop strips at each position on the inside of the cabinet to the shower frame (Figure 7). Hook and loop strips are sewn in place on both the outside and inside of the shower cabinet.

OPERATION UNDER USUAL CONDITIONS - (CONTINUED)

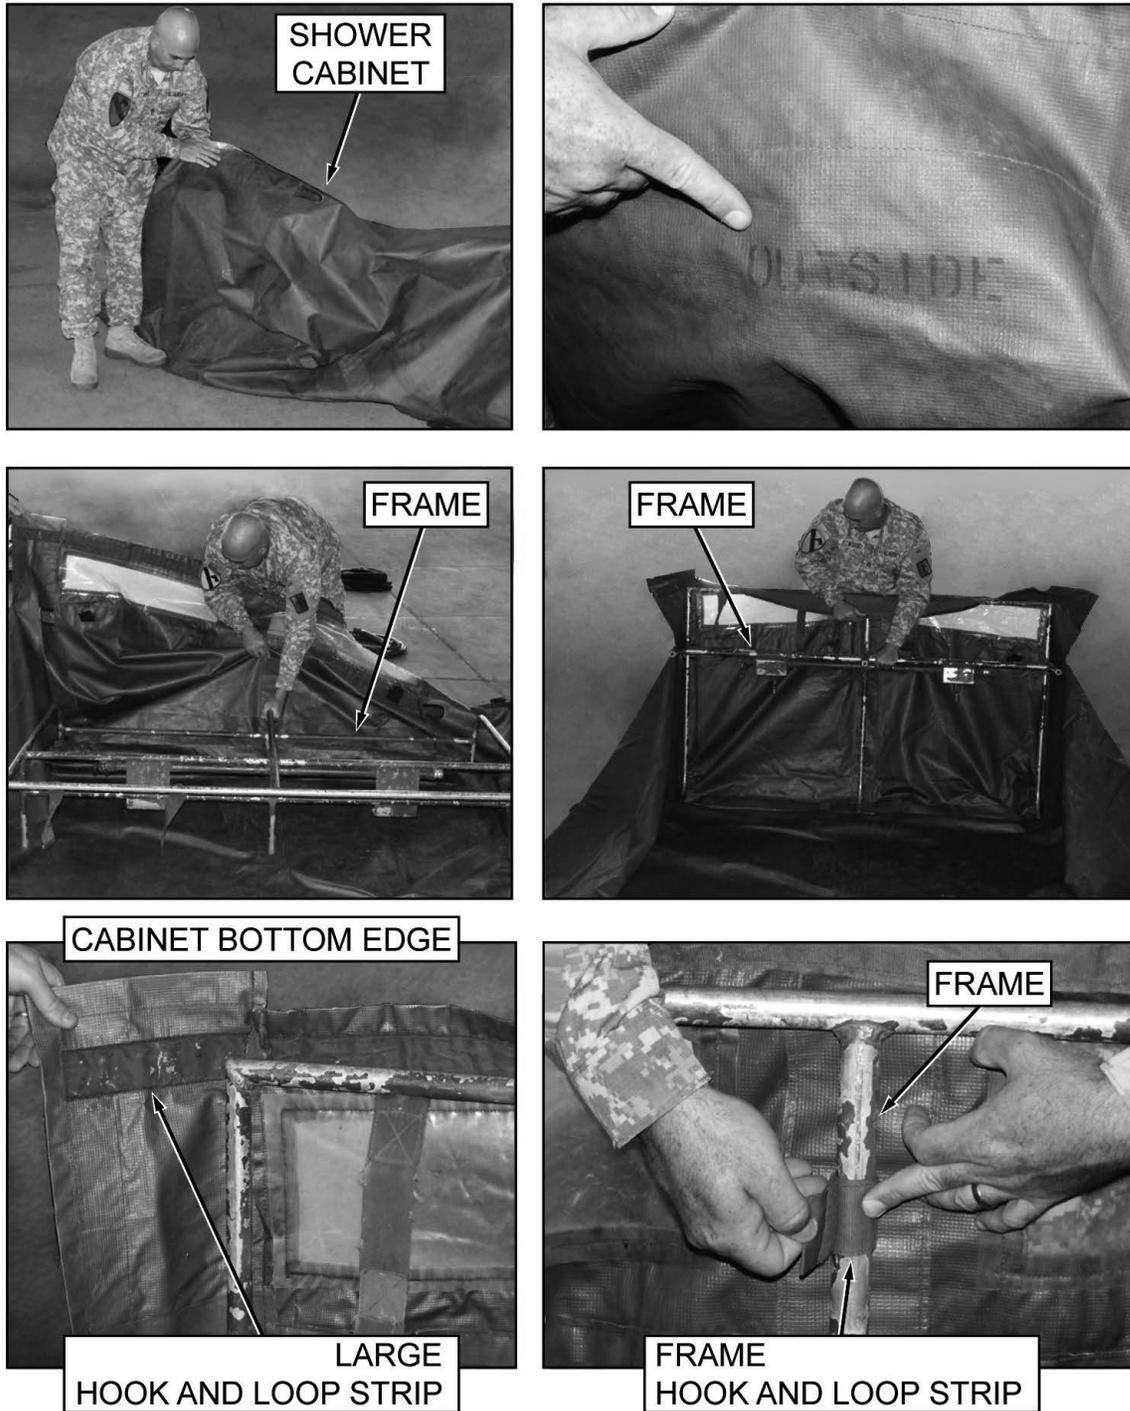

Figure 7. Assembling the Shower Cabinet and Frame.

**OPERATION UNDER USUAL CONDITIONS - (CONTINUED)****WARNING**

Be sure to use at least two operators to lift the shower cabinet and shower frame. Failure to follow this warning may result in serious injury to personnel.

14. From the inside, lift the shower frame and cabinet and install the assembly onto the shower cabinet support poles. Note that the two outer shower cabinet support poles should be on the outside of the shower cabinet.

**WARNING**

Be careful when installing the shower frame legs onto the shower cabinet support poles not to put your fingers directly on the location where the frame legs and support posts join. Severely pinched fingers may result. Failure to follow this warning may cause injury to personnel.

15. Install outer center shower cabinet support pole.
16. Secure the shower cabinet to the shower cabinet support poles (Figure 8) using the attached hook and loop strips.
17. Secure the shower cabinets to the inside of each shower base using attached hook and loop strips on the bottom skirt of the shower cabinet.
18. Perform steps 6 through 17 to assemble the remaining shower cabinet and frame assemblies until all shower cabinet and frame assemblies have been installed.
19. Secure the shower frames to each other using attached hook and loop strips (Figure 8).

Figure 8. Attaching the Outside Hook and Loop Strips.

## OPERATION UNDER USUAL CONDITIONS - (CONTINUED)

20. On the inside of the shower facility, each shower cabinet has two overhead hook and loop attaching strips (Figure 9). Secure each facing shower cabinet together using the attached hook and loop strips provided.

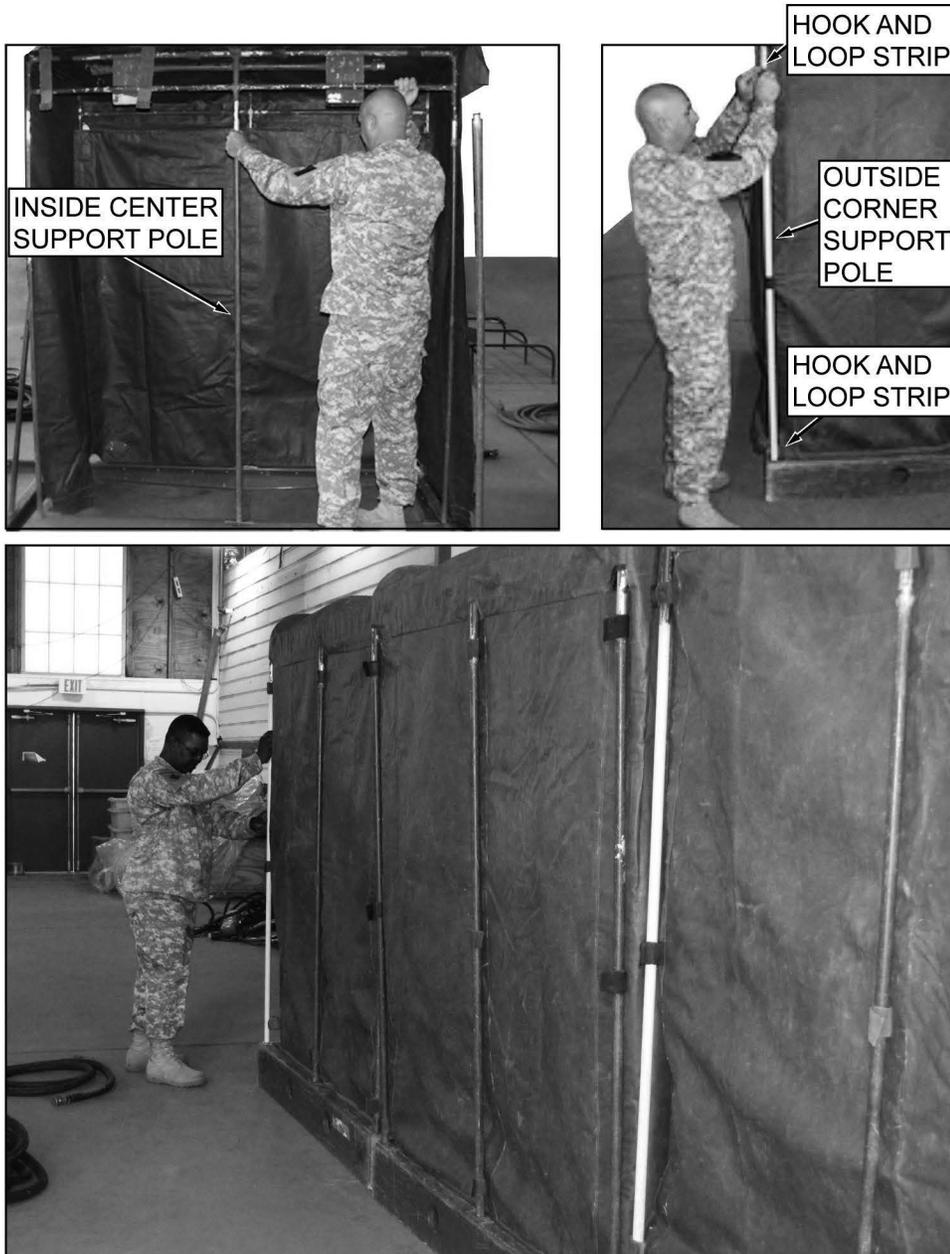

Figure 9. Attaching the Inside Hook and Loop Strips.

21. Secure the two shower cabinet door panels, one on each end, to the outside of the assembled shower using the attached hook and loop strips provided (Figure 10).

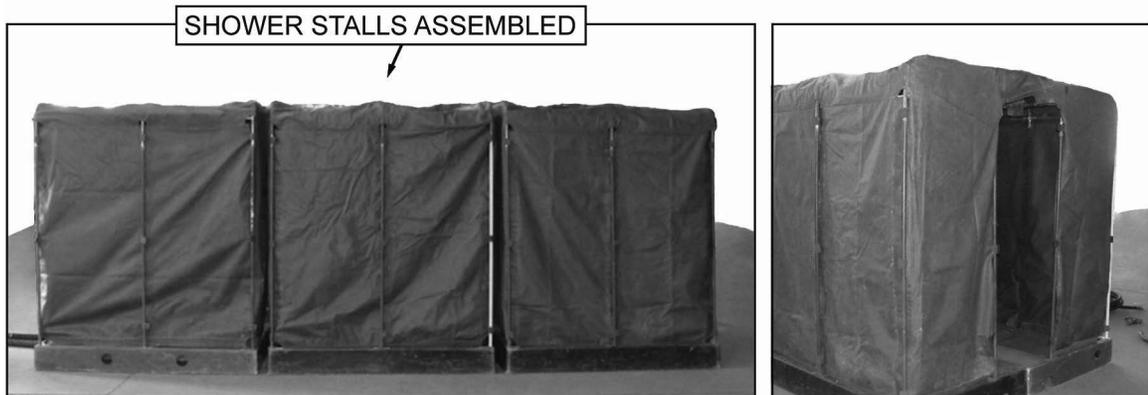

**OPERATION UNDER USUAL CONDITIONS - (CONTINUED)**

Figure 10. Assembled Shower Cabinet Assemblies.

**END OF TASK****HOSE CONNECTIONS****NOTE**

The 12-head shower assembly hoses are attached and connected using quick-disconnect connectors. No tools are required to connect the hoses. Refer to Figure 11 for a visual reference to hose connections and the pump assembly connection points.

OPERATION UNDER USUAL CONDITIONS - (CONTINUED)

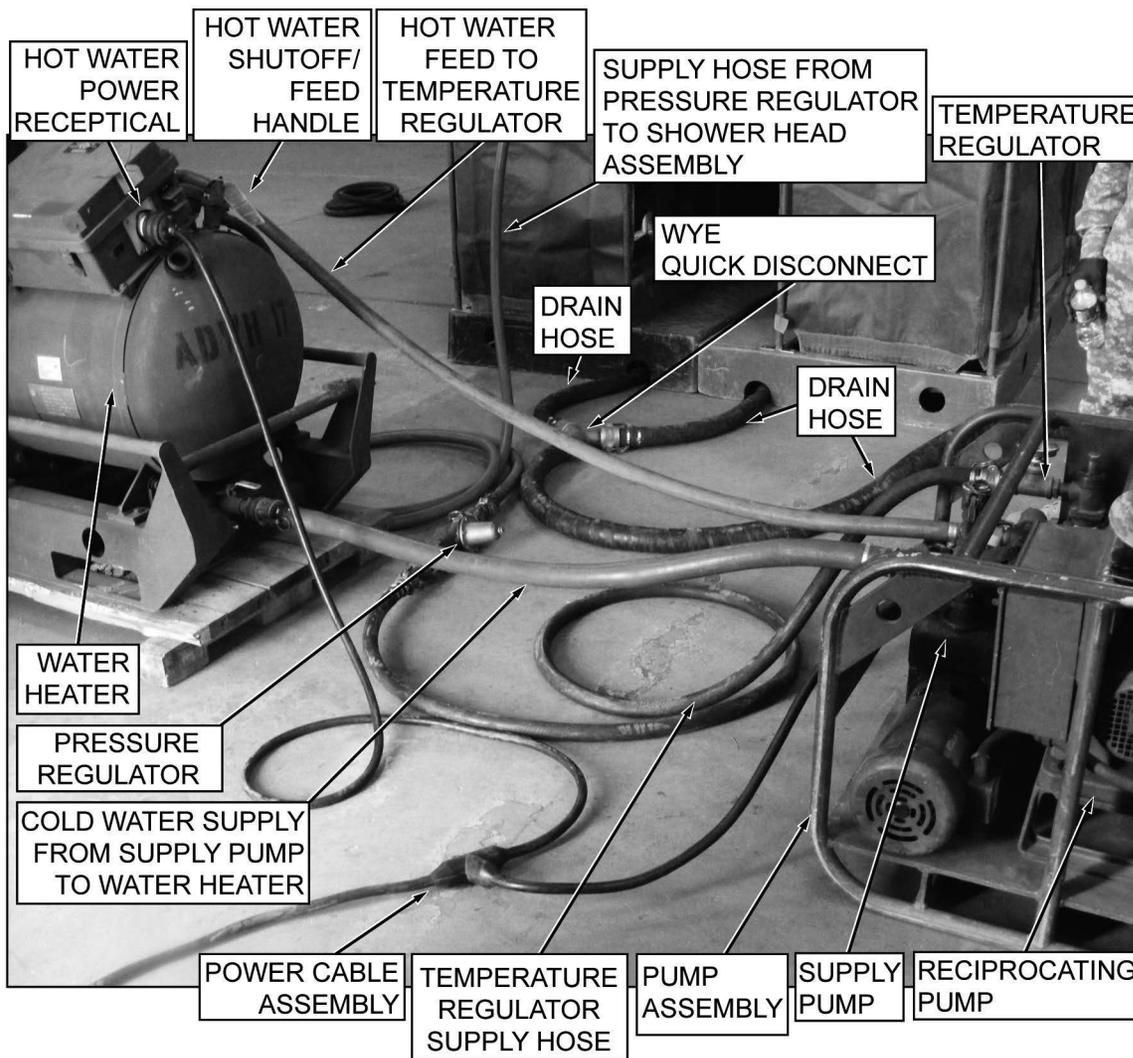

Figure 11. Hose Connections.

**OPERATION UNDER USUAL CONDITIONS - (CONTINUED)****WARNING**

Be sure to use at least four operators to move the pump assembly. Failure to follow this warning may result in serious injury to personnel.

1. Move the pump assembly to approximately ten feet from the end of the shower facility where the two drain hoses are extended out from the shower base (Figure 11).
2. Position the pump assembly so that the supply pump and reciprocation pump inlets are facing the shower facility (Figure 11).

**WARNING**

Be sure to use at least six operators to move the water heater. Failure to follow this warning may result in serious injury to personnel.

3. Move the water heater to a location approximately five feet from the pump assembly, so that the cold water inlet of the water heater is facing the cold water outlet of the supply pump (Figure 11).
4. Assemble the water supply suction strainer and check valve. Note that flow direction of the check valve must point away from the suction strainer.
5. Connect a 1-inch diameter by 35-foot long supply hose to the check valve.

**NOTE**

The suction strainer must rest within the water supply source at least 1 inch above the bottom. This will help prevent material that may be at the bottom of the water supply source from obstructing the free flow of water through the suction strainer.

6. Position the suction strainer end of the supply hose into the water supply, such that the suction strainer is completely submerged. Make sure that the suction strainer is at least 1 inch above the bottom of the water source.
7. If necessary to reach the supply pump, join the 1-inch diameter by 25-foot long supply hose with the 35-foot long supply hose to provide additional hose length.
8. Connect the supply hose to the supply pump inlet (Figure 12).

## OPERATION UNDER USUAL CONDITIONS - (CONTINUED)

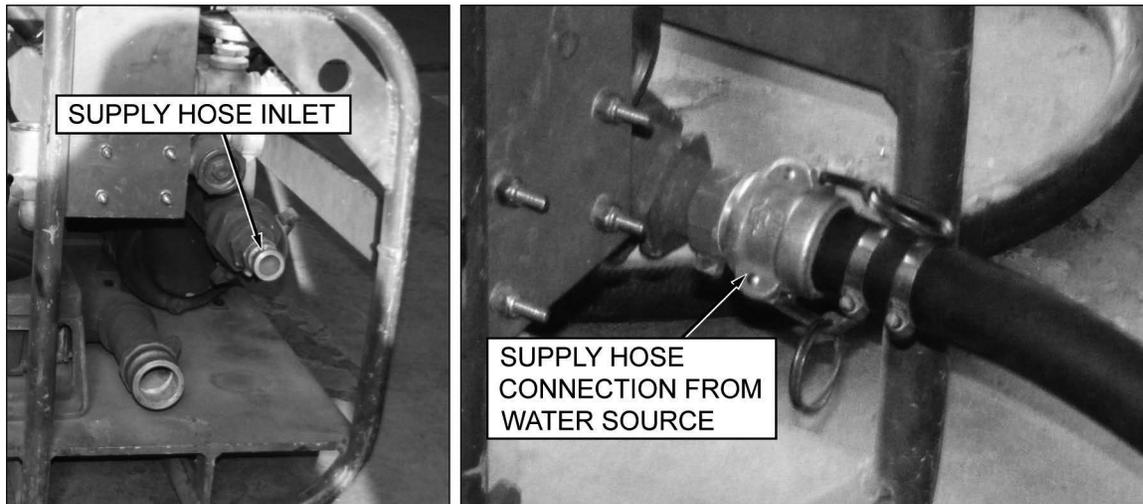

Figure 12. Connecting the Supply Hose to the Supply Pump Inlet.

9. Connect the hose between the temperature regulator outlet (Figure 13) and the pressure regulator (Figure 13) inlet, using a reducer between the hose and the pressure regulator. Note that the direction of water flow from the pressure regulator must be pointing away from the pump assembly, toward the shower facility.

Figure 13. Temperature Regulator to Pressure Regulator Connection.

10. Connect a 1-inch diameter by 35-foot long supply hose between the pressure regulator outlet and the shower head manifold (Figure 14), using a reducer between the pressure regulator outlet and the supply hose. Note that supply hose must pass through the opening provided in the shower cabinet.
11. Connect six supply hoses between each shower head manifold as shown in Figure 14. Connect the left and right side manifold hoses at the entrance end of the shower facility together as shown in Figure 14. Note that the connector hose must pass through opening in shower cabinet.

## OPERATION UNDER USUAL CONDITIONS - (CONTINUED)

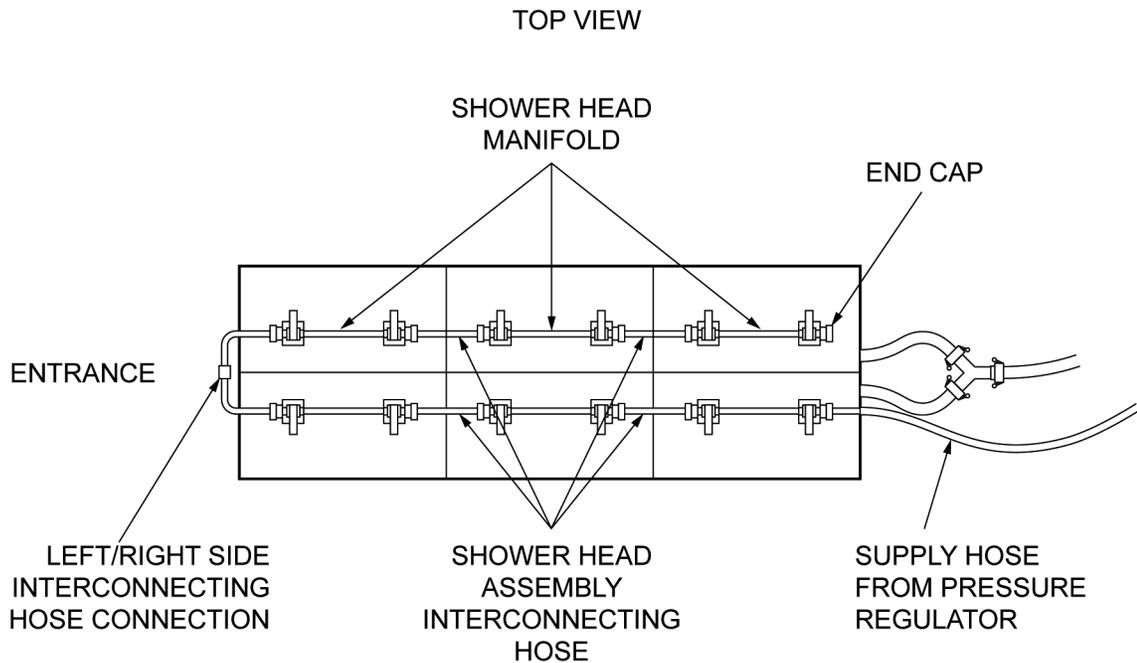

Figure 14. Connecting the Shower Manifold Assemblies.

12. Install an end cap onto the open end of last shower head manifold (Figure 14).
13. Connect two drain hoses extending from the shower facility to the WYE quick disconnect (Figure 15).
14. Connect the 2-inch diameter by 35-foot long noncollapsible drain hose between the WYE quick disconnect and the reciprocating pump inlet.
15. Connect the drain hose to the reciprocating pump outlet. (Figure 15).
16. Connect the opposite end of the drain hose to the waste water connection point (storage tank) or route to waste water disposal site.

OPERATION UNDER USUAL CONDITIONS - (CONTINUED)

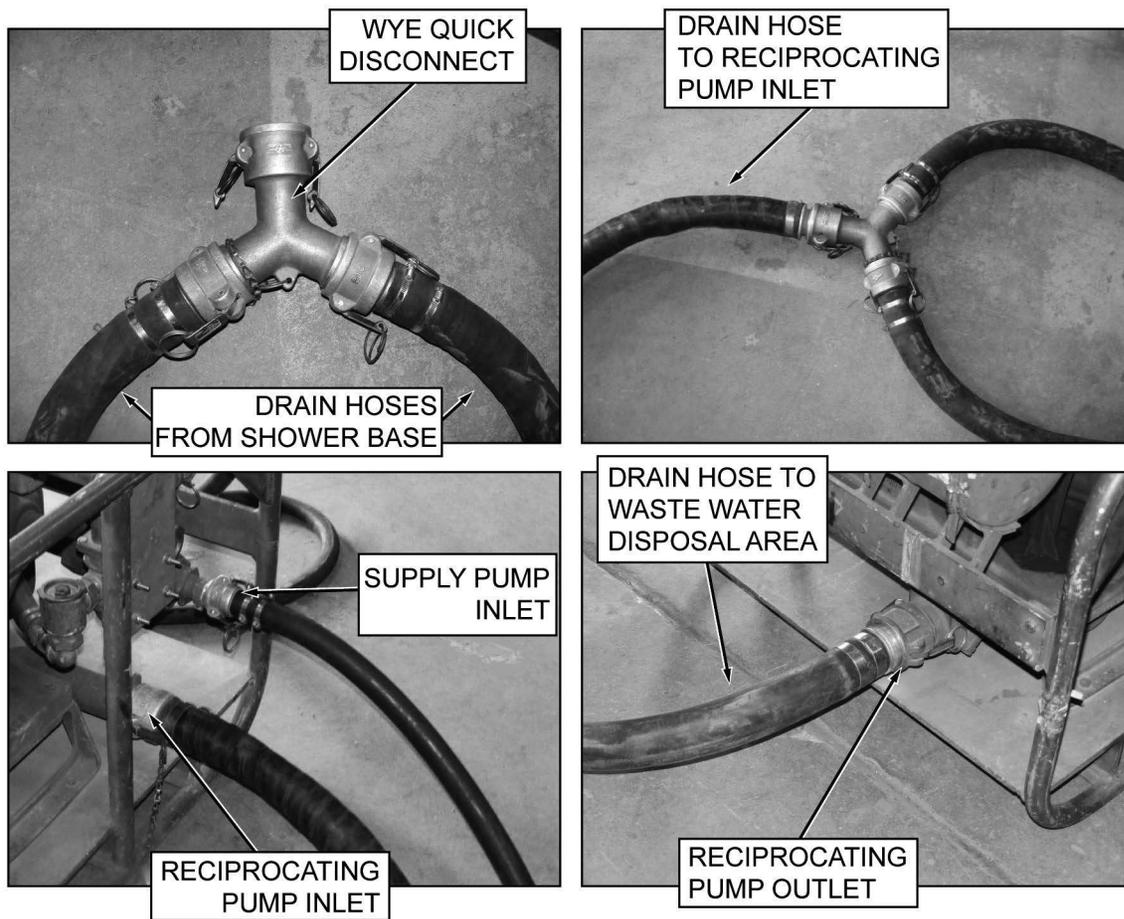

Figure 15. Connecting the Waste Water Drain Hoses.

17. Connect the 1½-inch diameter by 5-foot long cold water supply hose to the outlet side of the supply pump (Figure 16).
18. Connect the other end of the 5 foot supply hose to the inlet side of the water heater.

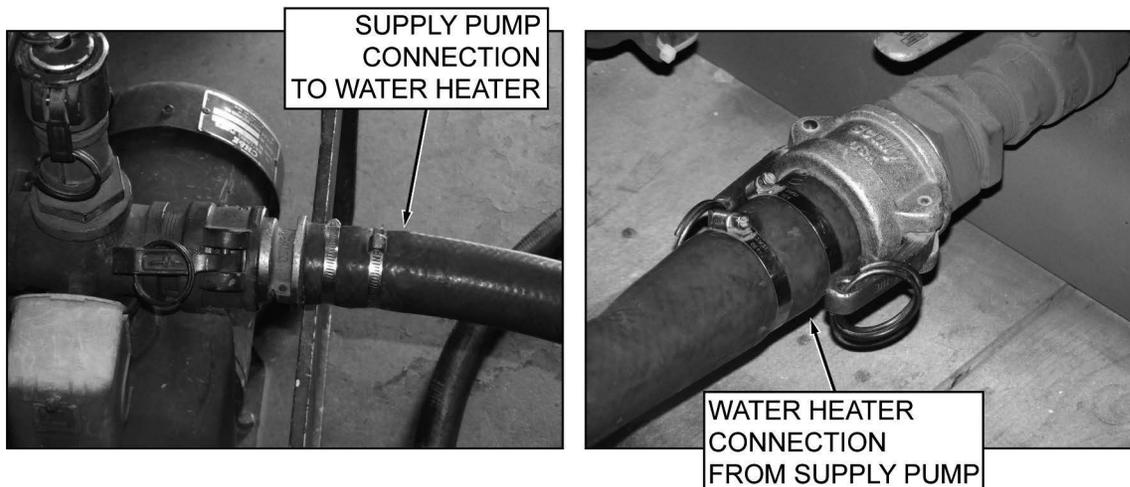

Figure 16. Connecting Cold Water Supply Hose from Supply Pump to Water Heater.

**OPERATION UNDER USUAL CONDITIONS - (CONTINUED)**

19. Connect the 1-inch diameter by 12-foot long hot water supply hose to the inlet side of the water heater (Figure 17).
20. Connect the other end of the 12-foot long hose to the outlet side of the temperature regulator (Figure 17).

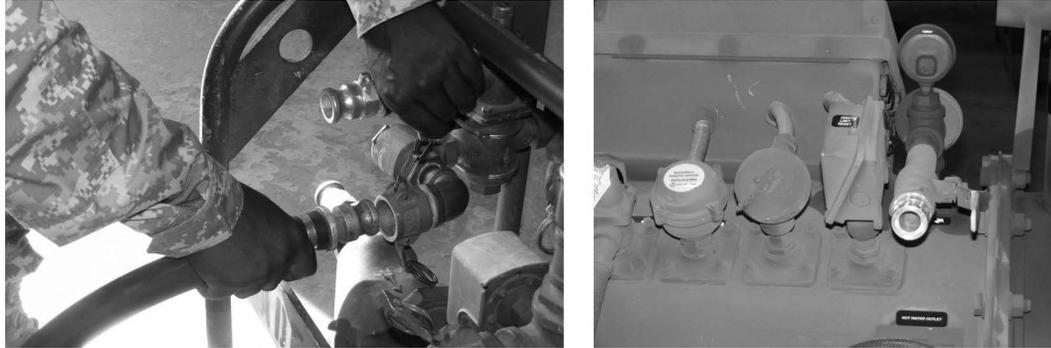

Figure 17. Connecting the Hot Water Supply Hose.

21. Contact maintenance to confirm that the closed side (air side) of the diaphragm tank on the pump assembly is pressurized in accordance with the instruction plate located on top of the diaphragm tank.
22. Contact maintenance for connection of the two hot water heater fuel lines (Figure 18).

Figure 18. Connecting the Water Heater Fuel Lines.

**END OF TASK****CONNECT POWER CABLES****WARNING**

High voltage is used in the 12-head shower module. Care must be taken to avoid personal injury or death from energizing circuits.

**OPERATION UNDER USUAL CONDITIONS - (CONTINUED)**

1. Notify Maintainer maintenance to connect the input power cable (pigtail) to a 230 volts AC, 3 phase, 60 Hz power source.
2. Check that both pump switches (Figure 20) are in the OFF position, then plug one of the short lengths of the system power cable connector into the input power receptacle on the switch box (Figure 20).
3. Plug the other short length of the system power cable into the water heater electrical receptacle.
4. Plug the long length of the system power cable into the connector of the input power cable.

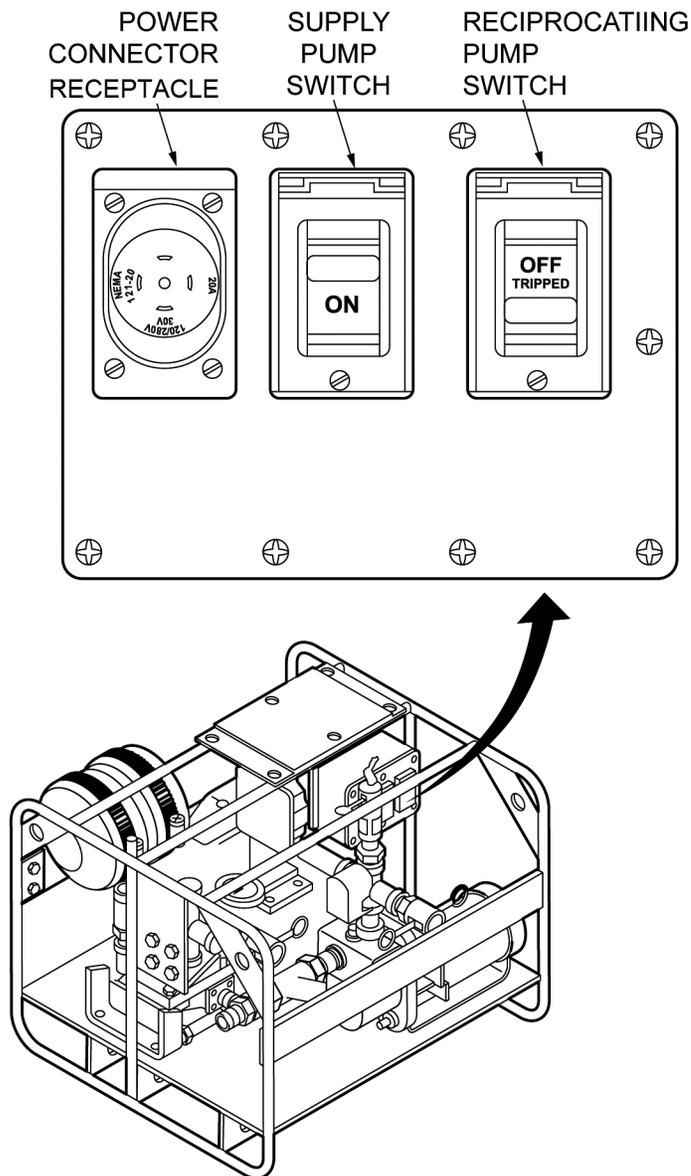

Figure 19. Connecting to the Power Source.

## OPERATION UNDER USUAL CONDITIONS - (CONTINUED)

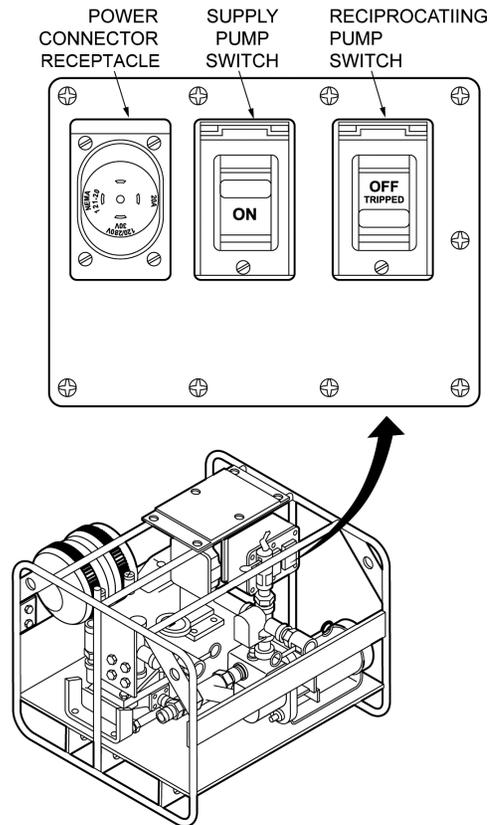

Figure 20. Connecting Electrical Power.

**END OF TASK****INSTALLING THE LIGHT SETS FOR TEMPER TENT**

There are three light sets provided with the 12-head shower, designed to be used when the shower is housed inside a TEMPER. Each light set contains four 2-foot lights. If the 12-head shower is housed inside a TEMPER assembly, install shower perimeter lighting as follows:

**WARNING**

High voltage is used in the 12-head shower module. Care must be taken to avoid contact with energizing circuits.

Lights from the light set must be installed in the TEMPER. Never install lights anywhere directly on the 12-head shower facility.

Failure to follow this warning could result in injury or death to personnel.

**OPERATION UNDER USUAL CONDITIONS - (CONTINUED)**

1. Determine the locations in the TEMPER where the lights will be installed.
2. Remove each light, one at a time, and uncoil the hook and loop straps that are used to hang the lights.
3. Feed the end of one hook and loop strap behind the horizontal support of the TEMPER, as shown in (Figure 21), and attach the end to the lower part of the strap so that is secured to the TEMPER support.
4. Connect the hook and loop strap in the same way as the first strap so that the light is parallel to the TEMPER horizontal support (Figure 21).

Figure 21. Installing Light Sets.

5. Repeat steps 1 through 4 for each light.
6. There is an electrical receptacle on each end of each light. String the lights together electrically by first plugging the electrical cable provided with the light set into the receptacle on the end of the light nearest the power source. Make sure the plug is connected to the receptacle on the end facing away from the power source.
7. Plug the cable into the receptacle on the opposing end of the next light in succession. Continue connecting each light until the last light in line is connected.
8. Plug an extension cable in the empty receptacle of the first light and then connect the other end of the extension cable into a 110 volt power source.
9. Energize the power source and visually inspect the light assembly to make sure all lights are working properly.

**END OF TASK****OPERATING PROCEDURES****Start-Up Procedures**

1. Confirm that PMCS is complete, referring to WP 0011, energizing shower as needed.

**WARNING**

High voltage is used in the 12-head shower module. Care must be taken to avoid personal injury or death from energizing circuits.

2. Confirm that all accessible hose and power connections are secure.
3. Confirm that supply hose is connected to a closed water supply or that the water supply suction strainer is completely submerged in the water source and off the floor of the water source at least one inch.
4. Confirm that the drain hose is routed to a waste water disposal site or connected to a waste water connection point (storage tank), whichever is applicable.
5. Open shower nozzle valves 11 and 12. If connected to a closed water supply, open the supply valve of the water supply.

**OPERATION UNDER USUAL CONDITIONS - (CONTINUED)**

6. Make sure the supply pump is primed. If not, remove the cap from the priming pipe (Figure 22) and pour enough water into the supply pump to prime it. Priming takes about 5 gallons of water.

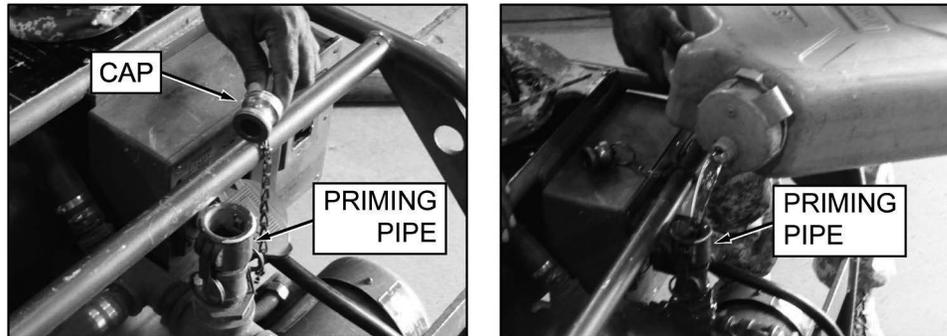

Figure 22. Priming the Supply Pump.

**CAUTION**

Be sure adequate water supply is available and supply pump remains primed.

7. Energize the power source and then flip the supply pump power switch to the ON position. When water begins to flow from the shower heads, flip the reciprocating pump power switch to the ON position.
8. Allow water to flow through system for two minutes, and then close all shower nozzle valves. If either pump fails to start, refer to troubleshooting procedures (WP 0008).
9. Check pump and all accessible hoses and connections for evidence of leaking, and to ensure connections are tight. Notify maintainer if a leak is found.

**WARNING**

Ensure the WH-400 is placed and operated in accordance with TM 10-4520-266-13&P. Failure to follow safety precautions may result in fire and possible injury or death to personnel.

11. Start up the hot water system, and wait until water reaches operating temperature (150°F). Refer to TM 10-4520-266-13&P for the WH-400 to find specific operating procedures for the hot water system.
12. When the hot water system has reached operating temperature, open all shower nozzle valves (Figure 23) and monitor the pump temperature gauge.
13. Adjust the temperature regulator as necessary to maintain desired shower water temperature of between 95–105°F. When desired temperature is ready, close all shower nozzle valves. The shower facility is now ready for use.

**OPERATION UNDER USUAL CONDITIONS - (CONTINUED)**

Figure 23. Shower Head.

**END OF TASK****USING THE SHOWER**

1. Open shower nozzle valve or push button (Figure 23) as necessary for desired water flow.
2. Close shower nozzle valve when finished with shower.

**END OF TASK****SHUT-DOWN PROCEDURES****CAUTION**

Begin shut-down procedures after the water temperature is below 100°F.

1. Shut off the fuel source to the hot water system. Refer to TM 10-4520-266-13&P for the WH-400 to find specific operating procedures for the hot water system.
2. With shower heads open, wait until discharge water and water in water heater are below 100°F.
3. Turn the supply pump and reciprocating power switches, located on the pump assembly switch box, to the OFF position and then de-energize power source.
4. If connected to a closed water supply, close the water supply valve.
5. Open a shower nozzle valve to relieve system pressure. Close the valve when water stops flowing from the nozzle.

**END OF TASK****DISASSEMBLY AND PREPARATION FOR MOVEMENT**

This section addresses the procedures required to disassemble the shower and prepare it for movement to another location.

Components of the shower must be stored in six separate shipping containers. During disassembly of the shower, remove and group shower components as best as possible in accordance with the container in which the components will be stored. Refer to Table 1 at the beginning of this work package to identify which components

**OPERATION UNDER USUAL CONDITIONS - (CONTINUED)**

go into which container. Refer to (Figure 26, Sheets 1 through 6) for a visual reference of the order in which components should be packed in each container. Each sheet of Figure 26 represents a different container, beginning with container 1 (Figure 26, Sheet 1) through to container 6 (Figure 26, Sheet 6).

**Disconnecting Power Cables**

**WARNING**  
**HIGH VOLTAGE**

High voltage is used in the 12-head shower module. Care must be taken to avoid personal injury or death from energized circuits.

1. Confirm that the power source is de-energized, and then disconnect the power cable from the generator.
2. Disconnect the power cable connector from the hot water heater power receptacle.
3. Disconnect the power cable plug from the supply pump power receptacle located on the pump assembly switch box.
4. Coil the power cables neatly for storage.

**END OF TASK****DISCONNECTING THE HOSES**

1. Contact maintenance to disconnect the two fuel hoses going to the fuel source (Figure 24, Item 2) from the hot water system (Figure 24, Item 1). Refer to TM 10-4520-266-13&P for specific procedures for disconnecting hoses from the hot water system.

**WARNING**

Hoses will contain water. Care must be taken to contain spills and minimize the danger of slipping.

2. Disconnect the cold water supply hose (Figure 24, Item 19) from between the hot water system (Figure 24, Item 1) and the supply pump (Figure 24, Item 7).
3. Disconnect the hot water supply hose (Figure 24, Item 3) from between the hot water system (Figure 24, Item 1) and the temperature regulator (Figure 24, Item 7).
4. Prepare the hot water system (Figure 24, Item 1) for storage/shipment. Refer to TM 10-4520-266-13&P for storage/shipment requirements for the hot water system.
5. Disconnect drain hose (Figure 24, Item 8) from pump assembly (Figure 24, Item 7) and wastewater connection point (e.g., storage tank), if connected to one.
6. Disconnect drain hose (Figure 24, Item 18) from WYE quick disconnect (Figure 24, Item 17) and from reciprocating pump.

**OPERATION UNDER USUAL CONDITIONS - (CONTINUED)**

7. Disconnect two drain hoses (Figure 24, Item 12) from WYE quick disconnect (Figure 24, Item 17).
8. Disconnect and remove supply hose (Figure 24, Item 11) from between temperature regulator valve outlet and shower head manifold (Figure 24, Item 13).
9. Disconnect the ends of the shower head assembly supply hose (Figure 24, Item 15), located over the entrance to shower facility.
10. Disconnect and remove six supply hoses from between each shower head manifold (Figure 24, Item 13).
11. Install attached caps onto manifold ends.
12. Disconnect supply hose (Figure 24, Item 4) from pump assembly (Figure 24, Item 7) and check valve (Figure 24, Item 5).
13. Remove check valve (Figure 24, Item 5) and suction strainer (Figure 24, Item 6) from supply hose.
14. Remove check valve (Figure 24, Item 5) from suction strainer (Figure 24, Item 6).
15. Drain and thoroughly dry all hoses, fitting, and components.
16. Coil hoses neatly for storage.
17. Notify maintainer to remove drain plug (Figure 24, Item 14) from the supply pump.
18. Carefully tip pump in all directions to drain the water.
19. When all water is drained, install the drain plug.

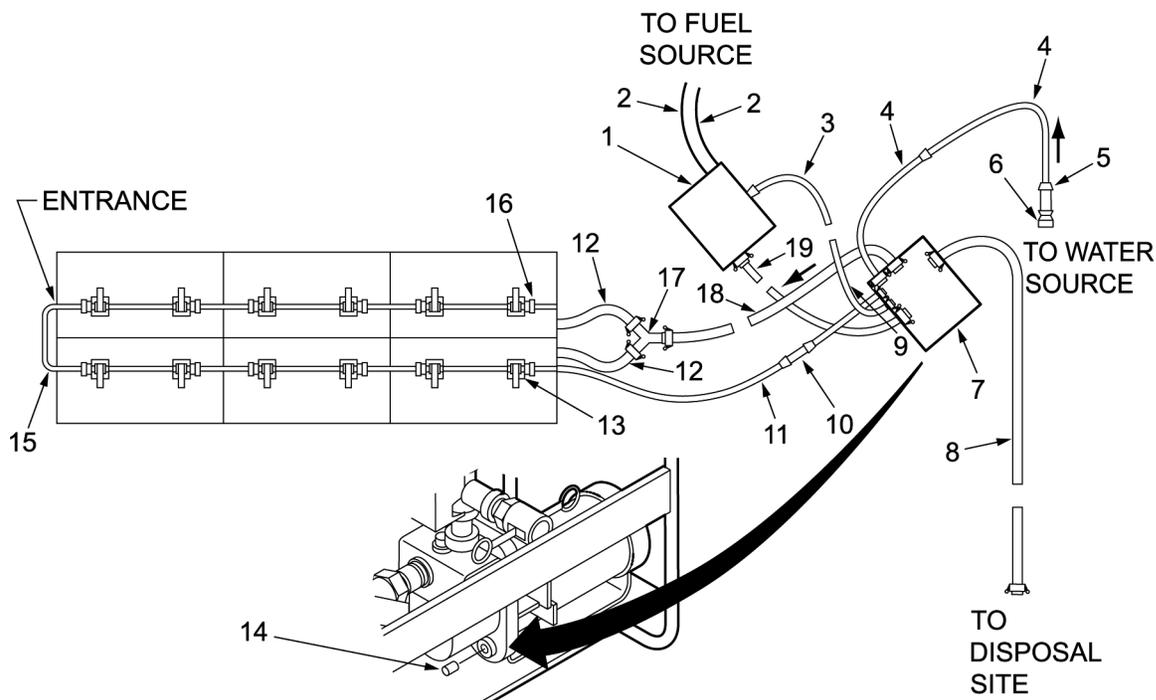

Figure 24. Disconnecting the Hoses.

**END OF TASK****DISASSEMBLING THE SHOWER****NOTE**

The following procedures are typical for each shower base.

1. Remove two shower cabinet door panels (Figure 25, Item 6) from the outside of the shower cabinet and fold the door panels neatly for storage.

OPERATION UNDER USUAL CONDITIONS - (CONTINUED)

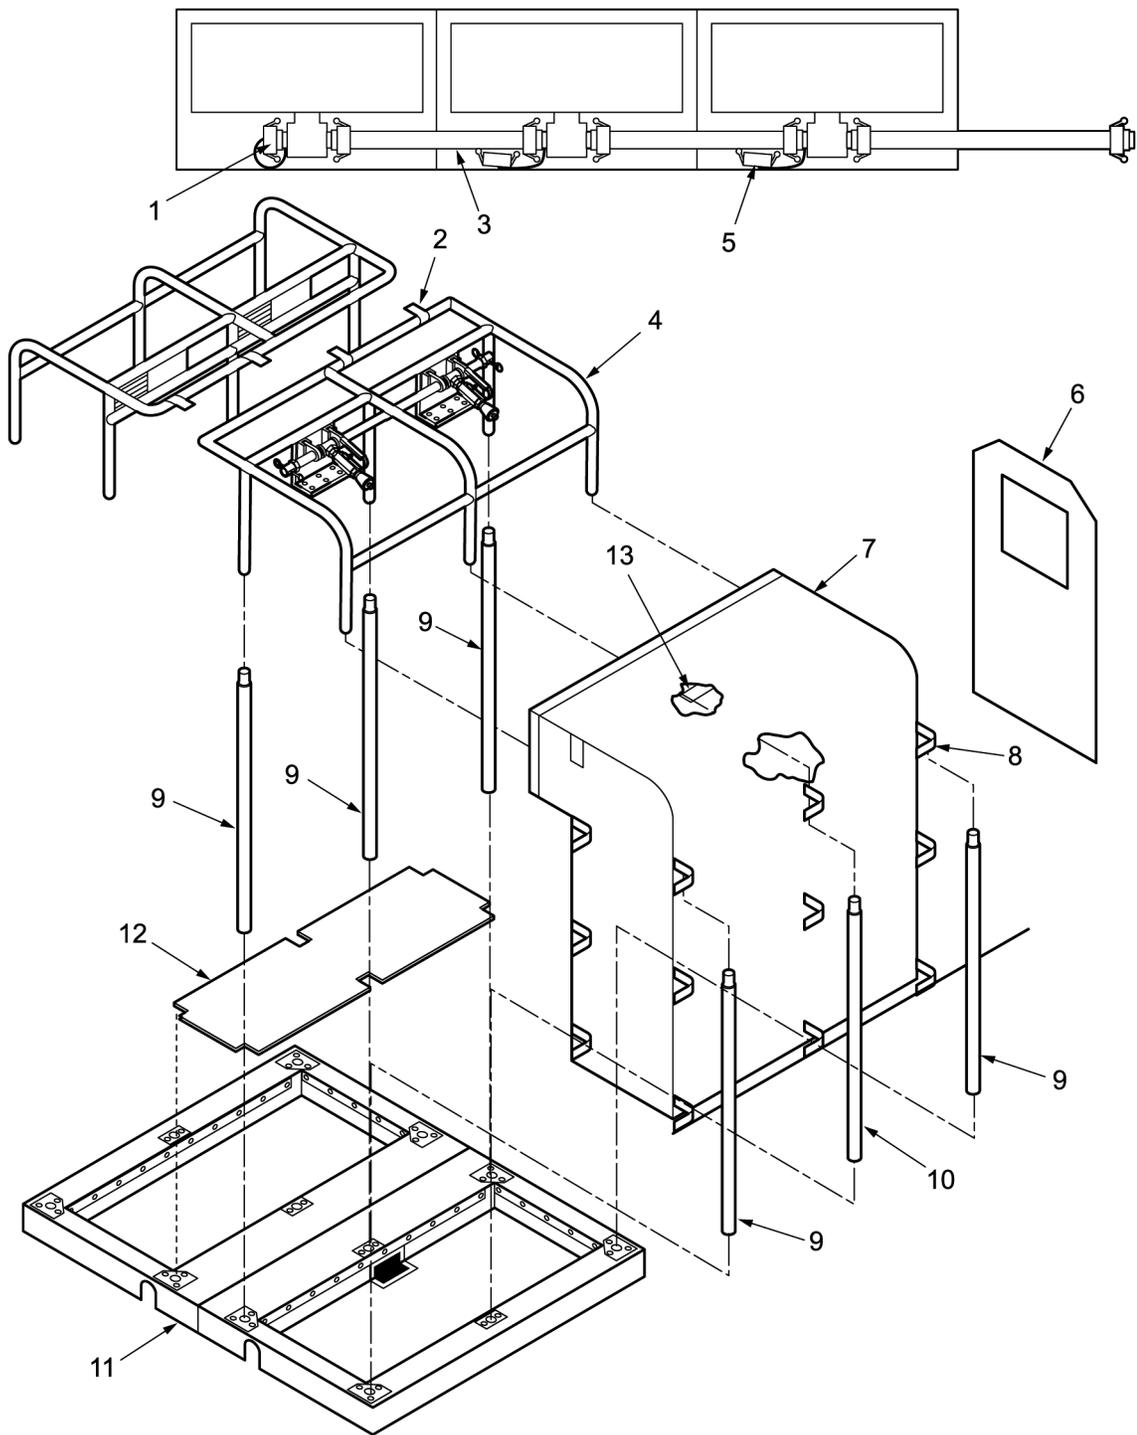

Figure 25. Disassembling the Shower.

2. Release hook and loop strips that secure shower cabinets (Figure 25, Item 7) facing each other.
3. Release attached hook and loop strips (Figure 25, Item 2) that secure shower frames (Figure 25, Item 4) facing each other.

**OPERATION UNDER USUAL CONDITIONS - (CONTINUED)**

4. Release hook and loop strips that secure the shower cabinets (Figure 25, Item 7) to the inside of the shower bases (Figure 25, Item 11).
5. Release attached hook and loop straps (Figure 25, Item 8) that secure shower cabinets (Figure 25, Item 7) to shower cabinet support poles (Figure 25, Items 9 and 10).
6. Remove shower cabinet center support poles (Figure 25, Item 10).

**WARNING**

Be sure to use at least two operators to lift each shower cabinet and shower frame. Failure to follow this warning may result in serious injury to personnel.

7. From the inside, two operators will lift shower frames (Figure 25, Item 4) with shower cabinets (Figure 25, Item 7) attached off of shower cabinet support poles (Figure 25, Item 9). While each shower frame is being removed, one operator will remove shower cabinet support poles.
8. Release hook and loop strips (Figure 25, Item 13) that secure the shower cabinets (Figure 25, Item 7) to the shower frames (Figure 25, Item 4).
9. Remove the shower cabinets from the shower frames.
10. Fold the shower cabinets neatly for storage.
11. Release hook and loop strips and remove the three shower cabinet floor panels (Figure 25, Item 12).
12. Pull the sets of three shower bases (Figure 25, Item 11) away from each other and carefully raise each set together to access the drain hoses (Figure 25, Item 3).
13. Remove six drain hoses (Figure 25, Item 3) and install 12 attached caps (Figure 25, Item 1) onto an open end of each shower base (Figure 25, Item 11) drain.
14. Empty and dry the drain hoses.
15. Carefully lower each shower base (Figure 24, Item 11).

**END OF TASK****PACKING THE SHOWER****NOTE**

Ensure that all items are clean and dry before packing.

1. Identify the correct storage container and the components to be packed using the packing lists in Table 1. If any components are damaged, notify maintainer.
2. Fold loose hardware components such as the regulator and WYE quick disconnect into the shower cabinet.
3. Insert shower bases flat into each storage container.
4. Pack each storage container in accordance with Figure 26, sheets 1 through 6, folding loose hardware components such as the regulator and the WYE disconnect into the shower cabinet.

END OF TASK

END OF WORK PACKAGE

---

**OPERATOR INSTRUCTIONS**  
**OPERATION UNDER UNUSUAL CONDITIONS**

---

**INITIAL SETUP:****Personnel Required**

Shower/Laundry and Clothing Repair Specialist,  
(92S) - 3

**References**

WP 0005

---

**OPERATION IN EXTREMELY COLD TEMPERATURES OF 32 °F (0 °C) AND BELOW**

The shower is typically installed inside a TEMPER tent and is therefore not subjected to any unusual operating conditions. Additionally, the water source must also be in a heated tent to keep from freezing. It should be noted, however, that the 12-head shower is limited to use in environments where the ambient air temperature is above 32 °F (0 °C).

If the shower is not inside a heated TEMPER tent and the ambient air temperature is expected to be 32 °F (0 °C) or colder, the shower hoses must be disconnected as per the following procedure:

**DRAINING THE SHOWER DUE TO TEMPERATURES AT OR BELOW 32 °F (0 °C)**

1. Using the supply pump power switch (Figure 1) located on the switch box, shut off the supply pump.
2. Run the reciprocating pump until all waste water has been removed from the shower facility. Shut down reciprocating pump and power source.
3. Disconnect all hoses and cables, referring to the procedure in WP 0005 for disconnecting power cables and hoses.

## OPERATION UNDER UNUSUAL CONDITIONS - (CONTINUED)

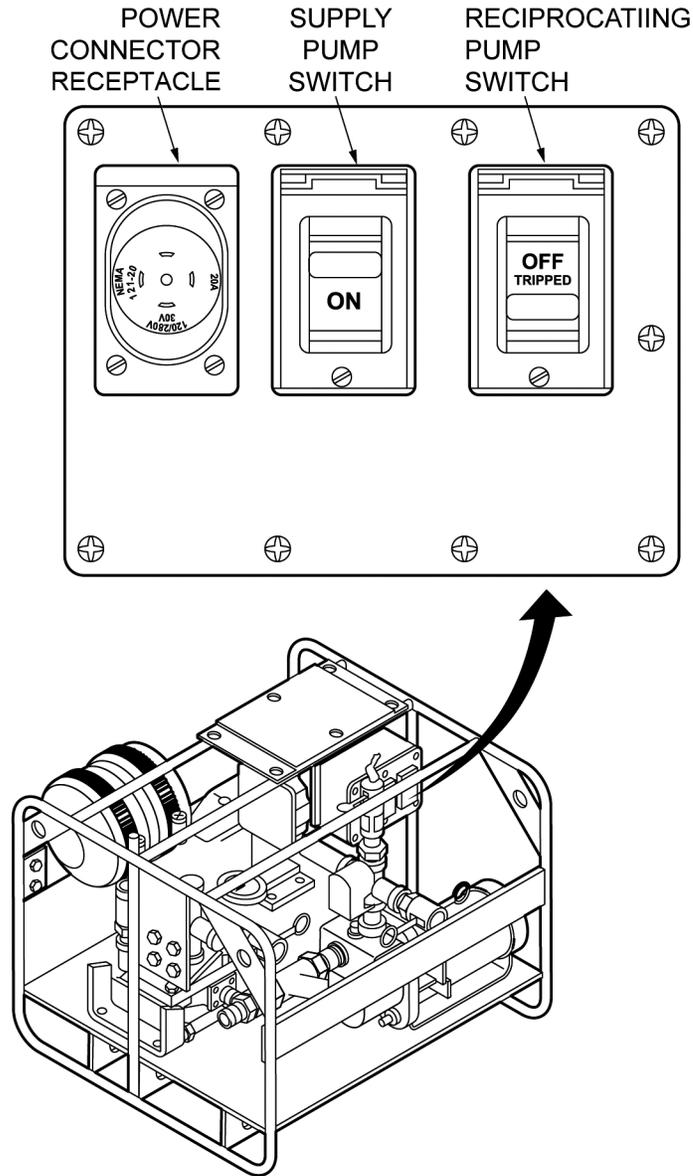

Figure 1. Pump Assembly Switch Box.

4. Alert field maintenance for removal of supply pump drain plug.
5. Remove the drain plug (Figure 2) until all water has drained from the supply pump.
6. When you have confirmed that all water has been drained, re-install the drain plug.

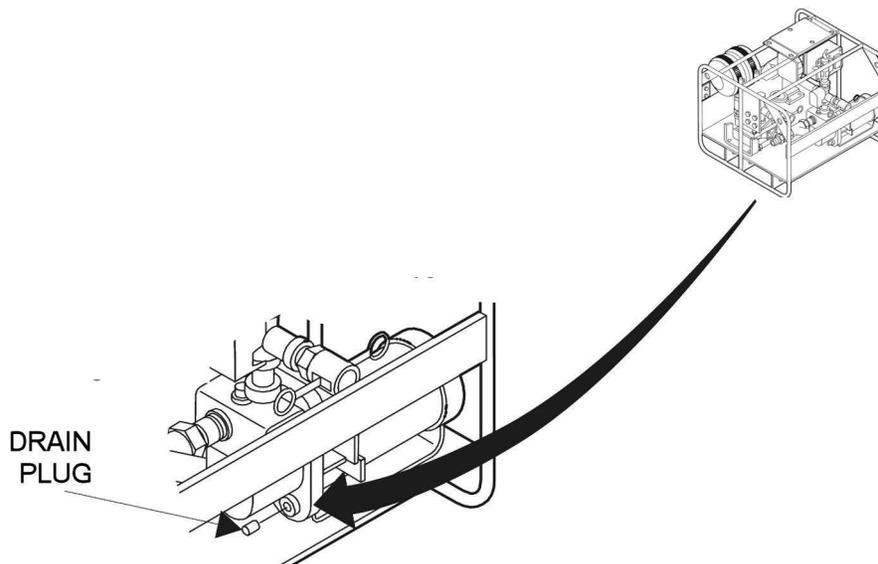

**OPERATION UNDER UNUSUAL CONDITIONS - (CONTINUED)**

Figure 2. Removing the Drain Plug.

**END OF TASK****CHEMICAL, BIOLOGICAL, RADIOLOGICAL AND NUCLEAR (CBRN) DECONTAMINATION.****WARNING**

For immediate decontaminating procedures use **ONLY** hot soapy water for spot decontamination of shower.

When a Nuclear, Biological, or Chemical attack is expected, and time allows, the shower should be packed for transport until threat of attack is over. If a CBRN attack occurs, unit must be decontaminated before use in accordance with FM 3-5.

**GENERAL INFORMATION**

This work package contains troubleshooting information for isolating most of the operating issues that may develop in the shower which can be resolved by the operator.

**TROUBLESHOOTING**

This work package contains the procedures to be followed by operator and/or field personnel in correcting possible malfunctions in the equipment. Troubleshooting is set up to use the decision tree method of troubleshooting, which tracks potential causes of equipment problems through a series of questions for which a yes or no answer will guide the operator to a solution.

This manual cannot list all malfunctions that may occur, nor all tests or inspections and corrective actions. If a malfunction is not listed or is not corrected by the listed corrective action, notify your supervisor.

The troubleshooting flow process that follows lists the common malfunctions which you may find during the operation or maintenance of the shower or its components. You should check the tests/inspections and corrective actions in the order listed.

Before using these tables, be sure you have performed all applicable operating checks. Functional checks and visual inspection should isolate most malfunctions or potential problems that occur with this equipment.

END OF WORK PACKAGE

**CHAPTER 4**  
**MAINTENANCE INSTRUCTIONS**  
**FOR**  
**12-HEAD SHOWER SYSTEM**  
**PREVENTIVE MAINTENANCE CHECKS AND SERVICES (PMCS)**

---

**OPERATOR INSTRUCTIONS****PREVENTIVE MAINTENANCE CHECKS AND SERVICES (PMCS) INTRODUCTION**

---

**INTRODUCTION****GENERAL**

Preventive Maintenance Checks and Services (PMCS) are essential to the efficient operation of the shower and to prevent possible damage that might occur through neglect or failure to observe symptoms of a failure in a timely manner. Checks and services performed by operators are limited to those that can be done with minimal disassembly and without the use of tools. The PMCS table lists the inspections and care of the 12-head shower module required to keep it in good operating condition. PMCS must be done every day the shower is operated. Pay attention to warning and caution statements. A warning means someone could be hurt. A caution means equipment could be damaged.

PMCS means systematic caring, inspecting, and servicing of equipment to keep it in good condition and to prevent breakdowns. Always perform the PMCS in the same order, so it gets to be a habit. Once you have had some practice, you will quickly spot anything wrong. Perform the PMCS as follows:

1. **BEFORE** — just before you operate the shower for the first time each day. These do not need to be performed before each use of the facility during the day. Pay attention to warnings, cautions, and notes.
2. **DURING** — while you operate the shower for the day. During operation means to monitor the shower and its related components while it is actually being operated. Pay attention to warnings, cautions, and notes.
3. **AFTER** — after operating the shower for the last time of the day. Pay attention to warnings, cautions, and notes.
4. **WEEKLY** — once each week, preferably on the same day each week, when the shower is not in use.
5. **MONTHLY** — once each month, preferably on the same day each month, when the shower is not in use.
6. **QUARTERLY** — once every three months, preferably at the same part of the month, when the shower is not in use.

If you find something wrong when performing PMCS, fix it using troubleshooting and/or maintenance procedures. If the fault cannot be corrected, use DA Form 2404 (Equipment Inspection and Maintenance Worksheet) to record the fault and immediately report it to your supervisor. When completing DA Form 2404, be sure to reference the item number of the faulty item from PMCS table.

Be prepared to assist maintainer maintenance when they lubricate the shower. Perform any other services when required by maintainer maintenance.

The right-hand column of the PMCS table lists conditions that make the shower not fully mission capable. Use DA Form 2404 to record any faults that you discover before, during, or after operation, unless you can fix them. For further information on how to use this form, see DA PAM 750-8. You **DO NOT** need to record faults that you fix.

If tools that are required to perform PMCS are not listed in procedures, notify your supervisor.

**PMCS PROCEDURES**

The PMCS tables (WP 0011, Table 1 and WP 0012, Table 1) list the inspections and care required to keep the shower in good operating condition. It is set up so you can perform **BEFORE** operation checks as you walk around the shower. The PMCS table includes the following columns:

1. The **ITEM NO.** column indicates the number assigned to each PMCS procedure. The procedures are numbered in logical sequence of performance.
2. The **INTERVAL** column indicates when to perform a certain check or service.
3. The **PROCEDURE** column states how to do the required checks and services. Carefully follow these instructions. If you do not have tools, or if the procedure tells you to, notify your supervisor.
4. The **EQUIPMENT NOT READY/AVAILABLE IF** column indicates when the shower is non-mission capable and why the equipment cannot be used.

**PREVENTIVE MAINTENANCE CHECKS AND SERVICES (PMCS) INTRODUCTION - (CONTINUED)****NOTE**

Only use those authorized cleaning solvents or agents listed in the Expendable/Durables work package (WP 0054) in this manual.

1. Keep it clean. Dirt, grease, oil, and debris may cover up a serious problem. Clean as you work and as needed. Use soap and water when you clean rubber or plastic material. When cleaning rust, use a cleaning solvent. Then apply a thin coat of light oil to affected area.
2. Rust and corrosion. Check the shower frame and metal components for rust and corrosion. If any bare metal or corrosion exists, clean and apply a thin coat of lubricating oil (WP 0054 Item 4). Report it to your supervisor.
3. Bolts, nuts, and screws. Check for obvious looseness and missing, bent, or broken condition. You cannot try them all with a tool, but look for chipped paint, bare metal, or rust around bolt heads. If you find a bolt, nut, or screw you think is loose, tighten it or report it to your supervisor.
4. Welds. Look for loose or chipped paint, rust, or gaps where parts are welded together. If you find a bad weld, report it to your supervisor.
5. Electric wires and connectors. Look for cracked, frayed, or bare wires, and for loose or broken connectors. Report any damaged wires to your supervisor.
6. Hoses and fluid lines. Look for wear, damage, and leaks, and make sure clamps and fittings are tight. Wet spots indicate leaks, but a stain around a fitting or connector can also mean a leak. If a leak comes from a loose fitting or connector, tighten it. If something is broken or worn out, report it to your supervisor. When you check for operating condition, look at the component to see if it's serviceable.

**Fluid Leaks**

It is necessary for you to know how fluid leakage affects the status of the shower. Following are types/classes of leakage you need to know to determine the status of the shower. Learn these leakage definitions and remember that when in doubt notify your supervisor.

Equipment operation is allowed with minor leakage (Class I or II). Consideration must be given to fluid capacity in the item/system being checked/inspected. When in doubt, notify your supervisor.

When operating with Class I or II leaks, continue to check fluid levels as required in the PMCS. Class III leaks should be reported immediately to your supervisor.

1. CLASS I - Seepage of fluid (as indicated by wetness or discoloration) not great enough to form drops.
2. CLASS II - Leakage of fluid great enough to form drops but not enough to cause drops to drip from item being checked/inspected.
3. CLASS III - Leakage of fluid great enough to form drops that fall from item being checked/inspected.

If the shower does not perform as required, refer to Chapter 3, Troubleshooting. If anything looks wrong and you cannot fix it, complete a DA Form 2404 or DA Form 5988E. IMMEDIATELY report the problem to your supervisor.

When you check for operating condition, look at the component to see if it is serviceable.

Figure 1 shows the shower and the PMCS items to be checked. Refer to Figure 1 for a visual reference during the PMCS inspections being performed in work packages WP 0011 and WP 0012.

PREVENTIVE MAINTENANCE CHECKS AND SERVICES (PMCS) INTRODUCTION - (CONTINUED)

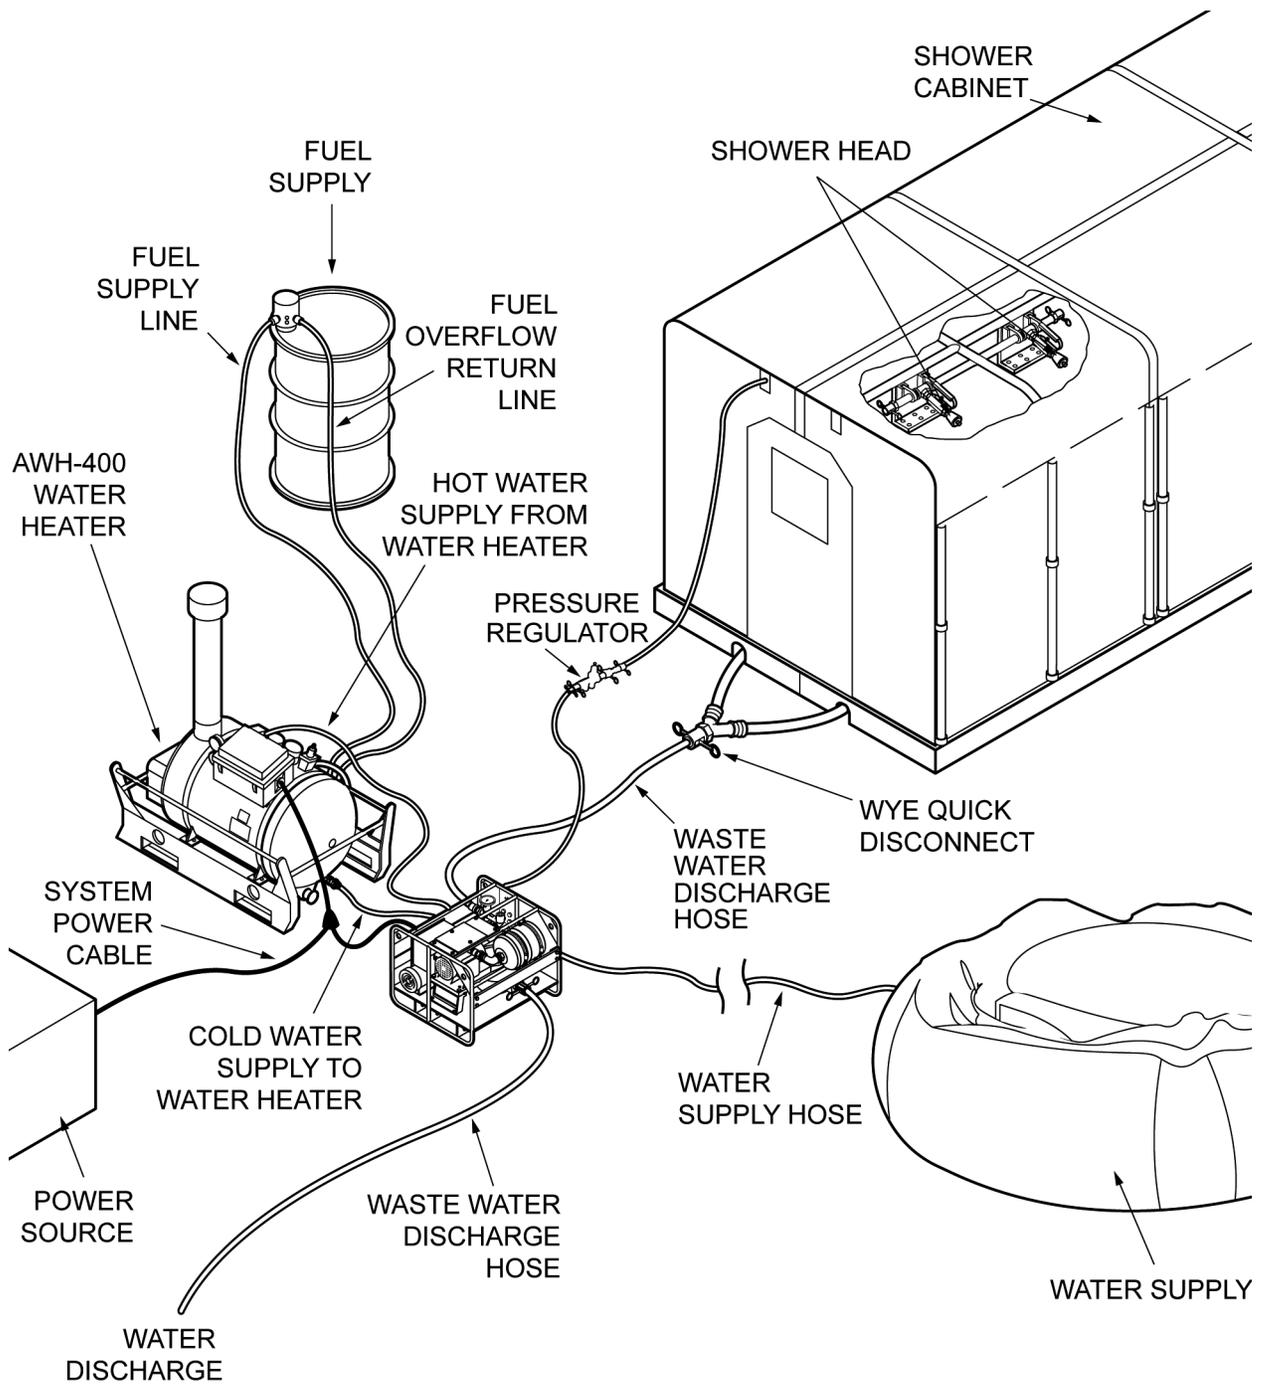

Figure 1. 12-Head Shower.

**Lubrication**

Figure 2 shows the PMCS lubrication of the reciprocating pump on a weekly interval. The reciprocating pump is Item No. 17 in the PMCS table in WP 0011. Remove the fitting cap (Figure 2, Item 1) and using the hand

**PREVENTIVE MAINTENANCE CHECKS AND SERVICES (PMCS) INTRODUCTION - (CONTINUED)**

lubrication gun (WP 0051, Table 2, Item 5), apply general purpose grease (WP 0054, Table 1, Item 2) to the grease fitting (Figure 2, Item 2).

**Table 1. Preventive Maintenance Checks And Services (PMCS)**

ITEM NO.	INTERVAL	ITEM TO BE CHECKED OR SERVICED	PROCEDURE	EQUIPMENT NOT READY/ AVAILABLE IF:
1	Before	Shower Cabinet	1. Inspect shower cabinet for cracks or punctures. Replace if required (WP 0015).  2. Inspect shower cabinet for general cleanliness. Clean if necessary (WP 0014).	Damage interferes with shower operation.
2	Before	Hook and Loop Strips	Inspect all hook and loop strips for fastening strength. If weak, replace as necessary.	
3	Before	Shower Cabinet Door Panel	1. Inspect shower cabinet door panels for cracks, punctures and for proper operation. Replace if required (WP 0015).  2. Inspect door panel for general cleanliness. Clean if necessary (WP 0014).	Damage interferes with shower operation.
4	Before	Shower Cabinet Floor Panel	Verify that the shower cabinet floor panels are not loose, cut, or damaged. Replace as required (WP 0018).	Floor panel damage interferes with shower operation.
5	Before	Floor Mat	Verify that floor mat is laying flat and is not cut or damaged. If not laying flat, straighten it. Replace if damaged (WP 0015).	Damage interferes with shower operation
6	Before	Shower Cabinet Support Pole	Inspect shower cabinet support poles for damage. Replace shower cabinet support poles as necessary (WP 0018).	Damage interferes with shower operation
7	Before	Shower Frame Assembly	Inspect shower frame for damage or missing parts. Contact maintainer for repair or replacement (WP 0016, WP 0021).	Damage interferes with shower operation

## PREVENTIVE MAINTENANCE CHECKS AND SERVICES (PMCS) - (CONTINUED)

ITEM NO.	INTERVAL	ITEM TO BE CHECKED OR SERVICED	PROCEDURE	EQUIPMENT NOT READY/ AVAILABLE IF:
8	Before	Shower Head Manifold	Operate shower. Inspect the operation of each showerhead as well as the showerhead spray. If spray is not even, clean the showerhead. If the showerhead cannot be cleaned and does not operate smoothly, contact maintainer support for repair or replacement (WP 0021).	Showerhead is clogged or valve does not work smoothly.
9	Before	Shower Base	<ol style="list-style-type: none"> <li>1. Inspect shower base for cracks, punctures, or leaks. Replace if required (WP 0017).</li> <li>2. Inspect shower base drains for damage or obstructions. Remove all material obstructing the drains. If damaged, replace if required (WP 0017).</li> <li>3. Inspect shower base for general cleanliness. Clean if necessary (WP 0014).</li> </ol>	<p>Damage interferes with shower operation.</p> <p>Damage interferes with shower operation.</p>
10	Before	Nonmetallic Hoses and Fittings	<ol style="list-style-type: none"> <li>1. Inspect all hoses and fittings for leaks. Replace leaking hoses or fittings as necessary (WP 0020).</li> <li>2. Verify that hoses are not kinked, pinched, damaged, or loose. Move hoses as necessary to relieve kink or pinch. Reconnect loose connections. Contact maintainer support to replace hose if damaged (WP 0020).</li> </ol>	<p>Hoses or fittings are leaking.</p> <p>A hose is kinked, pinched, or damaged.</p>
11	Before	Suction Strainer	Inspect suction strainer for debris or obstruction. Clear any obstruction found.	Obstruction cannot be cleared.
12	Before	Check Valve Assembly	<ol style="list-style-type: none"> <li>1. Inspect the check valve for leaks and to ensure it is properly connected. Secure connections to stop leaking as required. If leaking persists, contact maintainer support for replacement (WP 0023).</li> <li>2. Inspect for damage. If damaged, contact maintainer support for replacement (WP 0023).</li> </ol>	<p>Check valve assembly is leaking.</p> <p>Damage interferes with shower operation.</p>
13	Before	WYE Quick Disconnect	<ol style="list-style-type: none"> <li>1. Inspect for leaks and to verify that the WYE quick disconnect is properly connected and secure. Secure connections to stop leaking as required. If leaking persists, replace the WYE quick disconnect (WP 0015).</li> <li>2. Inspect for damage. Replace WYE quick disconnect if damage interferes with shower operation (WP 0015).</li> </ol>	<p>Leaking is excessive and interferes with shower operation.</p> <p>Damage interferes with shower operation.</p>

**PREVENTIVE MAINTENANCE CHECKS AND SERVICES (PMCS) - (CONTINUED)**

ITEM NO.	INTERVAL	ITEM TO BE CHECKED OR SERVICED	PROCEDURE	EQUIPMENT NOT READY/ AVAILABLE IF:
14	Before	Pressure Regulator	<ol style="list-style-type: none"> <li>1. If the shower has low or no water pressure, and all hoses, fittings, suction strainer, and supply pump have been inspected for proper operation, inspect the regulator valve assembly for proper operation. Contact maintainer support for replacement (WP 0020).</li> <li>2. Inspect for leaks and to ensure proper connection. Secure connections to stop leaking as required. If leaking persists, contact maintainer support for replacement (WP 0020).</li> </ol>	<p>Damage interferes with shower operation.</p> <p>Regulator valve assembly is leaking.</p>
15	Before	Temperature Regulator	<ol style="list-style-type: none"> <li>1. Inspect for proper operation and to verify the water temperature of the shower is the temperature set on the temperature gauge. If the water is not being heated or the temperature gauge is not indicating properly, contact maintainer support for repair or replace (WP 0014 , WP 0027).</li> <li>2. Inspect the glass of the temperature gage for cracks. If the gage glass is cracked or damaged, contact maintenance to repair the temperature regulator (WP 0027).</li> <li>3. Check that the temperature regulator knurled temperature control knob moves freely and affects the water temperature when adjusted in either direction. If the control knob does not move freely or does not affect changes in water temperature when adjusted, contact maintenance to repair the temperature regulator (WP 0027).</li> </ol>	<p>Temperature regulator not operating as designed.</p> <p>Temperature regulator glass is cracked.</p> <p>Temperature regulator not operating as designed.</p>
16	Before	Diaphragm Tank and Pump Frame	<ol style="list-style-type: none"> <li>1. Inspect the diaphragm tank for damage. Contact Maintainer maintenance for repair or replacement (WP 0030).</li> <li>2. Inspect the pump frame for damage. Contact maintainer support for repair (WP 0030).</li> </ol>	<p>Diaphragm tank damaged.</p> <p>Damage to pump frame interferes with shower operation.</p>
17	Before	Reciprocating Pump Assembly	<ol style="list-style-type: none"> <li>1. Check reciprocating pump for proper operation. Check that it is well lubricated and free from dirt buildup. Lubricate if necessary (WP 0010). Clean if necessary (WP 0014). Contact maintainer support if reciprocating pump is not properly operating.</li> </ol>	<p>Reciprocating pump is not operating properly.</p>

## PREVENTIVE MAINTENANCE CHECKS AND SERVICES (PMCS) - (CONTINUED)

ITEM NO.	INTERVAL	ITEM TO BE CHECKED OR SERVICED	PROCEDURE	EQUIPMENT NOT READY/ AVAILABLE IF:
			2. Inspect the reciprocating pump diaphragm for cuts or tears. If cut or torn, contact Maintainer maintenance to repair the reciprocating pump (WP 0029).	Reciprocating pump diaphragm has cuts or tears.
18	Before	Supply Pump Assembly	<ol style="list-style-type: none"> <li>1. Inspect supply pump for proper operation, ensuring pump is primed. If not operating properly, contact maintainer support for replacement (WP 0023).</li> <li>2. Inspect that the supply pump motor fan is rotating clockwise. If it is not, contact Maintainer maintenance to properly connect the power cable to the 3-phase power source.</li> <li>3. Inspect for dirt buildup. Clean if necessary (WP 0014).</li> </ol>	<p>Supply pump is not operating properly.</p> <p>Supply pump fan is rotating counterclockwise.</p>
19	Before	Power Cable Assembly	Verify that the power cable assembly is in good condition and securely connected to the pump and water heater. Secure loose cable connectors as necessary. If damaged, contact maintainer support to for repair or replacement (WP 0015, WP 0020).	Power cable assembly is damaged or loose on pump or water heater.
20	Before	Storage Containers	Inspect for damage or missing hardware and for any damage to container. If damaged, contact maintainer support for repair or replacement (WP 0031, WP 0032).	Container damage or hardware missing.
21	During	Shower Cabinet	<ol style="list-style-type: none"> <li>1. Inspect shower cabinet for cracks or punctures. Replace if required (WP 0018).</li> <li>2. Inspect shower cabinet for general cleanliness. Clean if necessary (WP 0014).</li> </ol>	Damage interferes with shower operation.
22	During	Hook and Loop Strips	Inspect all hook and loop strips for fastening strength. If weak, replace as necessary.	
23	During	Shower Cabinet Door Panel	<ol style="list-style-type: none"> <li>1. Inspect shower cabinet door panels for cracks, punctures and for proper operation. Replace if required (WP 0015).</li> <li>2. Inspect door panel for general cleanliness. Clean if necessary (WP 0014).</li> </ol>	Damage interferes with shower operation.
24	During	Shower Cabinet Floor Panel	<ol style="list-style-type: none"> <li>1. Verify that the shower cabinet floor panels are not loose, cut, or damaged. Replace as required (WP 0018).</li> <li>2. Inspect for soap or dirt buildup. Clean if necessary (WP 0014).</li> </ol>	Floor panel damage interferes with shower operation.
25	During	Floor Mat	Verify that floor mat is laying flat and is not cut or damaged. If not laying flat, straighten it. Replace if damaged (WP 0015).	Damage interferes with shower operation

## PREVENTIVE MAINTENANCE CHECKS AND SERVICES (PMCS) - (CONTINUED)

ITEM NO.	INTERVAL	ITEM TO BE CHECKED OR SERVICED	PROCEDURE	EQUIPMENT NOT READY/ AVAILABLE IF:
26	During	Shower Cabinet Support Pole	Inspect shower cabinet support poles for damage. Replace shower cabinet support poles as necessary (WP 0018).	Damage interferes with shower operation
27	During	Shower Frame Assembly	Inspect shower frame for damage or missing parts. Contact maintainer for repair or replacement (WP 0016, WP 0021).	Damage interferes with shower operation
28	During	Shower Head Manifold	Operate shower. Inspect the operation of each nozzle valve as well as the nozzle spray. If spray is not even, clean the nozzle. If the nozzle cannot be cleaned and does not operate smoothly, contact maintainer support for repair or replacement (WP 0021).	Nozzle is clogged or valve does not work smoothly.
29	During	Shower Base	<ol style="list-style-type: none"> <li>1. Inspect shower base for cracks, punctures, or leaks. Replace if required (WP 0017)</li> <li>2. Inspect shower base drains for damage and proper drainage. Remove all material obstructing the drains. If damaged, replace if required (WP 0017)</li> <li>3. Inspect shower base for general cleanliness. Clean if necessary (WP 0014).</li> </ol>	<p>Damage interferes with shower operation.</p> <p>Damage interferes with shower operation.</p>
30	During	Nonmetallic Hoses and Fittings	<ol style="list-style-type: none"> <li>1. Inspect all hoses and fittings for leaks. Replace leaking hoses or fittings as necessary (WP 00207).</li> <li>2. Verify that hoses are not kinked, pinched, damaged, or loose. Move hoses as necessary to relieve kink or pinch. Reconnect loose connections. Contact maintainer support to replace hose if damaged (WP 0020).</li> </ol>	<p>Hoses or fittings are leaking.</p> <p>A hose is kinked, pinched, or damaged.</p>
31	During	WYE Quick Disconnect	<ol style="list-style-type: none"> <li>1. Inspect for leaks and to verify that the WYE quick disconnect is properly connected and secure. Secure connections to stop leaking as required. If leaking persists, replace the WYE quick disconnect (WP 0015).</li> <li>2. Inspect for damage. Replace WYE quick disconnect if damage interferes with shower operation (WP 0015).</li> </ol>	<p>Leaking is excessive and interferes with shower operation.</p> <p>Damage interferes with shower operation.</p>
32	During	Supply Pump Assembly	<ol style="list-style-type: none"> <li>1. Inspect supply pump for proper operation. If not operating properly, contact maintainer support for repair (WP 0023).</li> <li>2. Inspect for dirt buildup. Clean if necessary (WP 0014).</li> </ol>	Supply pump is not operating properly.

## PREVENTIVE MAINTENANCE CHECKS AND SERVICES (PMCS) - (CONTINUED)

ITEM NO.	INTERVAL	ITEM TO BE CHECKED OR SERVICED	PROCEDURE	EQUIPMENT NOT READY/ AVAILABLE IF:
33	During	Diaphragm Tank and Pump Frame	<ol style="list-style-type: none"> <li>1. Inspect the diaphragm tank for damage and proper operation. Verify that the diaphragm tank is warmer on the hose end than on the closed end. Equal temperature on both ends of the diaphragm tank indicates damage to the diaphragm on the inside of the tank. Contact Maintainer maintenance for repair or replacement (WP 0030).</li> <li>2. Inspect the pump frame for damage. Contact maintainer support for repair.</li> </ol>	<p>Diaphragm tank damaged that could affect shower operation. Temperature is as warm on the closed end of the tank as it is on the hose side.</p> <p>Damage to pump frame interferes with shower operation.</p>
34	During	Power Cable Assembly	Verify that the power cable assembly is in good condition and securely connected to the pump and water heater. Secure loose cable connectors as necessary. If damaged, contact maintainer support to for repair or replacement (WP 0015, WP 0020).	Power cable assembly is damaged or loose on pump or water heater.
35	After	Shower Cabinet	<ol style="list-style-type: none"> <li>1. Inspect shower cabinet for cracks or punctures. Replace if required (WP 0015).</li> <li>2. Inspect shower cabinet for general cleanliness. Clean if necessary (WP 0014).</li> </ol>	Damage interferes with shower operation.
36	After	Hook and Loop Strips	Inspect all hook and loop strips for fastening strength. If weak, replace as necessary.	
37	After	Shower Cabinet Door Panel	<ol style="list-style-type: none"> <li>1. Inspect shower cabinet door panels for cracks, punctures and for proper operation. Replace if required (WP 0015).</li> <li>2. Inspect door panel for general cleanliness. Clean if necessary (WP 0014).</li> </ol>	Damage interferes with shower operation.
38	After	Shower Cabinet Floor Panel	Verify that the shower cabinet floor panels are not loose, cut, or damaged. Replace as required (WP 0018).	Floor panel damage interferes with shower operation.
39	After	Floor Mat	Verify that floor mat is laying flat and is not cut or damaged. If not laying flat, straighten it. Replace if damaged (WP 0015).	Damage interferes with shower operation.
40	After	Shower Cabinet Support Pole	Inspect shower cabinet support poles for damage. Replace shower cabinet support poles as necessary (WP 0015).	Damage interferes with shower operation.
41	After	Shower Frame Assembly	Inspect shower frame for damage or missing parts. Contact maintainer for repair or replacement (WP 0016, WP 0021).	Damage interferes with shower operation.

## PREVENTIVE MAINTENANCE CHECKS AND SERVICES (PMCS) - (CONTINUED)

ITEM NO.	INTERVAL	ITEM TO BE CHECKED OR SERVICED	PROCEDURE	EQUIPMENT NOT READY/ AVAILABLE IF:
42	After	Shower Head Manifold	Operate shower. Inspect the operation of each showerhead as well as the showerhead spray. If spray is not even, clean the showerhead. If the showerhead cannot be cleaned and does not operate smoothly, contact maintainer support for repair or replacement (WP 0021).	Nozzle is clogged or valve does not work smoothly.
43	After	Shower Base	<ol style="list-style-type: none"> <li>1. Inspect shower base for cracks, punctures, or leaks. Replace if required (WP 0017)</li> <li>2. Inspect shower base drains for damage and proper drainage. Remove all material obstructing the drains. If damaged, replace if required (WP 0017)</li> <li>3. Inspect shower base for general cleanliness. Clean if necessary (WP 0014).</li> </ol>	<p>Damage interferes with shower operation.</p> <p>Damage interferes with shower operation.</p>
44	After	Nonmetallic Hoses and Fittings	<ol style="list-style-type: none"> <li>1. Inspect all hoses and fittings for leaks. Replace leaking hoses or fittings as necessary (WP 0020).</li> <li>2. Verify that hoses are not kinked, pinched, damaged, or lose. Move hoses as necessary to relieve kink or pinch. Reconnect lose connections. Contact maintainer support to replace hose if damaged (WP 0020).</li> </ol>	<p>Hoses or fittings are leaking.</p> <p>A hose is kinked, pinched, or damaged.</p>
45	After	Suction Strainer	Inspect suction strainer for debris or obstruction. Clear any obstruction found.	Obstruction cannot be cleared.
46	After	Check Valve Assembly	<ol style="list-style-type: none"> <li>1. Inspect the check valve for leaks and to ensure it is properly connected. Secure connections to stop leaking as required. If leaking persists, contact maintainer support for replacement (WP 0023).</li> <li>2. Inspect for damage. If damaged, contact maintainer support for replacement (WP 0023).</li> </ol>	<p>Check valve assembly is leaking.</p> <p>Damage interferes with shower operation.</p>
47	After	WYE Quick Disconnect	1. Inspect for leaks and to verify that the WYE quick disconnect is properly connected and secure. Secure connections to stop leaking as required. If leaking persists, replace the WYE quick disconnect (WP 0015).	Leaking is excessive and interferes with shower operation.

## PREVENTIVE MAINTENANCE CHECKS AND SERVICES (PMCS) - (CONTINUED)

ITEM NO.	INTERVAL	ITEM TO BE CHECKED OR SERVICED	PROCEDURE	EQUIPMENT NOT READY/ AVAILABLE IF:
			2. Inspect for damage. Replace WYE quick disconnect if damage interferes with shower operation (WP 0015).	Damage interferes with shower operation.
48	After	Pressure Regulator	<ol style="list-style-type: none"> <li>1. If the shower has low or no water pressure, and all hoses, fittings, suction strainer, and supply pump have been inspected for proper operation, inspect the regulator valve assembly for proper operation. Contact Maintainer maintenance to troubleshoot the issue and replace the pressure regulator if necessary (WP 0020).</li> <li>2. Inspect for leaks and to ensure proper connection. Secure connections to stop leaking as required. If leaking persists, contact maintainer support for replacement (WP 0020).</li> </ol>	<p>Damage interferes with shower operation.</p> <p>Regulator valve assembly is leaking.</p>
49	After	Temperature Regulator	Inspect for proper operation and to verify the water temperature of the shower is the temperature set on the temperature gauge. If the water is not being heated or the temperature gauge is not indicating properly, contact maintainer support for repair or replace (WP 0014, WP 0027).	Temperature regulator not operating as designed.
50	After	Diaphragm Tank and Pump Frame	<ol style="list-style-type: none"> <li>1. Inspect the diaphragm tank for damage. Contact Maintainer maintenance for repair or replacement (WP 0030).</li> <li>2. Inspect the pump frame for damage. Contact maintainer support for repair (WP 0030).</li> </ol>	<p>Diaphragm tank damaged.</p> <p>Damage to pump frame interferes with shower operation.</p>
51	After	Reciprocating Pump Assembly	Check reciprocating pump for proper operation. Check that it is well lubricated and free from dirt buildup. Lubricate if necessary (WP 0010). Clean if necessary (WP 0014). Contact maintainer support if reciprocating pump is not properly operating.	Reciprocating pump is not operating properly.
52	After	Supply Pump Assembly	<ol style="list-style-type: none"> <li>1. Inspect supply pump for proper operation. If not operating properly, contact maintainer support for replacement (WP 0023)</li> <li>2. Inspect for dirt buildup. Clean if necessary (WP 0014).</li> </ol>	Supply pump is not operating properly.

**INTRODUCTION****NOTE**

Repair Parts and Special Tools List (RPSTL) (WP 0045) as well as the Maintenance Allocation Chart (MAC) (WP 0051) identify the tools and support equipment needed to maintain the shower.

This work package addresses the Service Upon Receipt of Materiel for the 12-head shower.

**SERVICE UPON RECEIPT OF MATERIEL****Checking Unpacked Equipment**

Inspecting and Servicing the Equipment. There are no special procedures required for inspecting and servicing the shower on receipt. Refer to WP 0005 for shower set up procedures.

Inspect the equipment for damage incurred during shipment. If the equipment has been damaged, report the damage on SF Form 364, Report of Discrepancy.

Check the equipment against the packing slip to see if the shipment is complete. Report all discrepancies in accordance with DA PAM 750-8.

Check to see whether the equipment has been modified. Equipment that has been modified will have the Modification Work Order (MWO) number near the identification plate. Check also to see whether all currently applicable MWO's have been applied. Current MWO's applicable to the equipment are listed in the Modification Management Information System (MMIS).

**END OF TASK****INSTALLATION**

There are no installation procedures required at the time the 12-head shower is received.

---

**GENERAL CLEANING PROCEDURES****WARNING**

Wear eye protection when using cleaning solvents. Failure to follow this warning may result in serious injury to personnel.

This work package contains instructions covering the cleaning of the shower. These procedures are applicable to cleaning on a regular basis as well as cleaning in preparation for storage and shipment.

1. Scrub each shower cabinet, shower nozzle, and shower base to remove soap buildup.
2. Rinse with clean water.
3. Scrub each floor panel to remove soap buildup.
4. Rinse with clean water.
5. With the shower in operational condition, open all shower nozzle assembly valves and allow water to run until water leaving drain hose is clear. If the spray from any nozzle does not flow properly, clean the nozzle to clear shower head holes from obstruction to the extent possible. If a nozzle cannot be cleared of obstructions, contact maintainer support to repair or replace the nozzle.
6. Close all shower nozzle assembly valves.
7. Shut down the 12-head shower system.
8. Using a bristle brush, scrub floor mat to remove any dirt. Rinse with clean water.

**END OF TASK****END OF WORK PACKAGE**

## OPERATOR INSTRUCTIONS

### 12-HEAD SHOWER SYSTEM REPAIR

#### INITIAL SETUP:

##### Materials/Parts

Strap, Retaining (WP 0052, Table 1, Item 22), 2  
Gloves, Men's (WP 0054, Table 1, Item 4)

##### Personnel Required

Shower/Laundry and Clothing Repair Specialist,  
(92S) - 1  
Quartermaster and Chemical Equipment Repairer,  
(91J) - 1

##### Equipment Condition

Water drained from shower  
Shower not in use  
Shower powered off  
Both pump switches in the OFF position  
Power cable connector disconnected from power source

#### FLOOR MAT REPLACEMENT

##### Removal

1. Roll up and remove floor mat (Figure 1, Item 3). The mats are located parallel along each side of the shower.
2. Wrap two retaining straps (Figure 1, Item 2) around rolled up floor mat (Figure 1, Item 1).

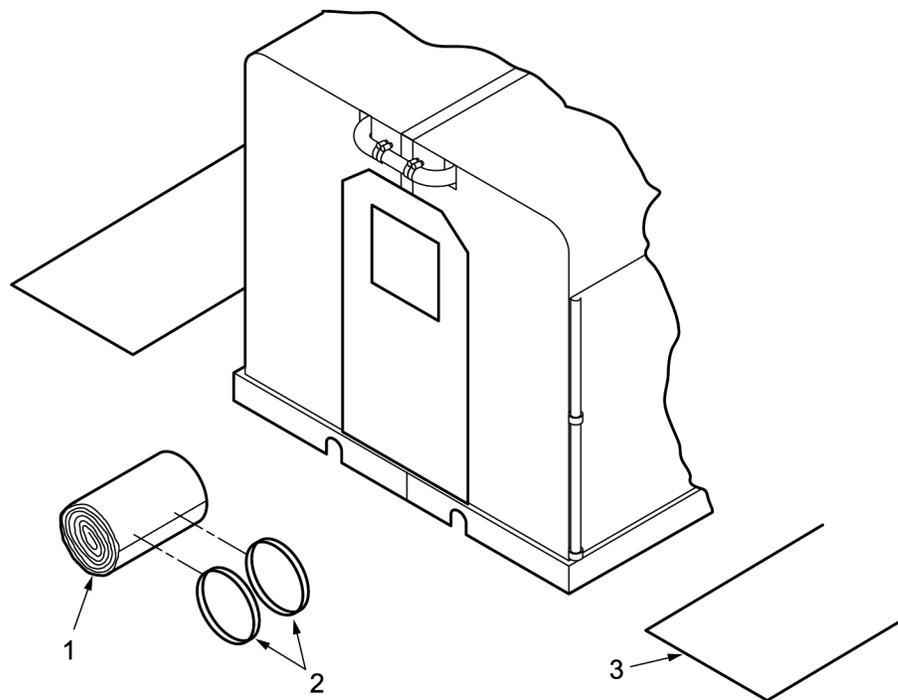

Figure 1. Replacing the Floor Mat.

##### Installation

1. Remove two retaining straps (Figure 1, Item 2) from new floor mat (Figure 1, Item 1).
2. Unroll new floor mat and place it in position where the damaged mat was removed.

#### END OF TASK

**12-HEAD SHOWER SYSTEM REPAIR - (CONTINUED)****SHOWER CABINET DOOR PANEL REPLACEMENT****Removal**

1. Separate the shower cabinet door panel (Figure 2, Item 2) from the hook and loop strip (Figure 2, Item 1).
2. Remove shower cabinet door panel (Figure 2 Item 2).

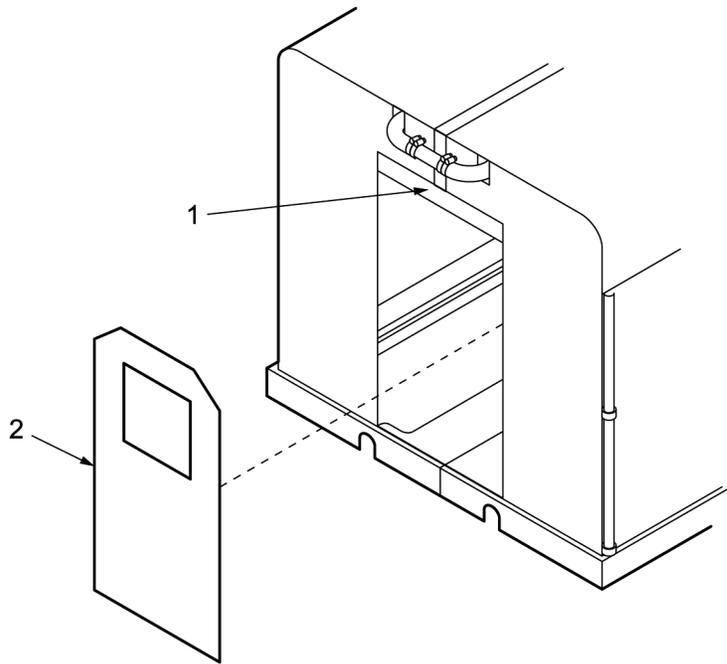

Figure 2. Replacing the Shower Cabinet Door Panel.

**Installation**

1. Install shower cabinet door panel (Figure 2, Item 2) in place.
2. Secure using hook and loop strip (Figure 2, Item 1).

**END OF TASK****WYE QUICK DISCONNECT REPLACEMENT****Removal**

1. Release the quick disconnect coupling (Figure 3, Item 2).
2. Separate the drain hose (Figure 3, Item 1) from the WYE quick disconnect (Figure 3, Item 3).

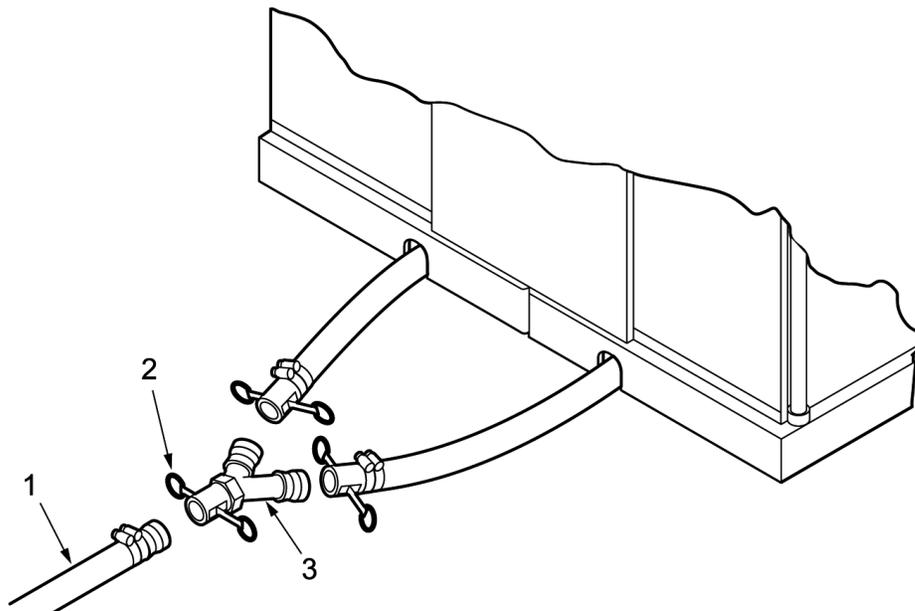

**12-HEAD SHOWER SYSTEM REPAIR - (CONTINUED)**

Figure 3. Replacing the WYE Quick Disconnect.

**Installation****CAUTION**

Verify that the drain hoses are not kinked when replacing the WYE quick disconnect.

1. Connect the drain hose (Figure 3, Item 1) to the WYE quick disconnect coupler (Figure 3, Item 3).
2. Secure the drain hose (Figure 3, Item 1) using the quick disconnect coupling (Figure 3, Item 2).

**END OF TASK****POWER CABLE ASSEMBLY REPLACEMENT****WARNING**

High voltage is used on the 12-head shower system. Care must be taken to avoid personal injury or death from energizing circuits.

**12-HEAD SHOWER SYSTEM REPAIR - (CONTINUED)****WARNING**

Make sure that source power has been shut off before removing the power cable. Failure to follow this warning may result in injury or death to personnel.

**Removal****NOTE**

If no obvious physical damage can be seen on the power cable, a continuity check must be accomplished on each lead of the power cable to determine that the power cable is no longer serviceable.

1. Disconnect the power cable plug (Figure 4, Item 1) from the input power cable.
2. Disconnect the power cable plug (Figure 4, Item 2).
3. Disconnect the power cable (Figure 4, Item 3).

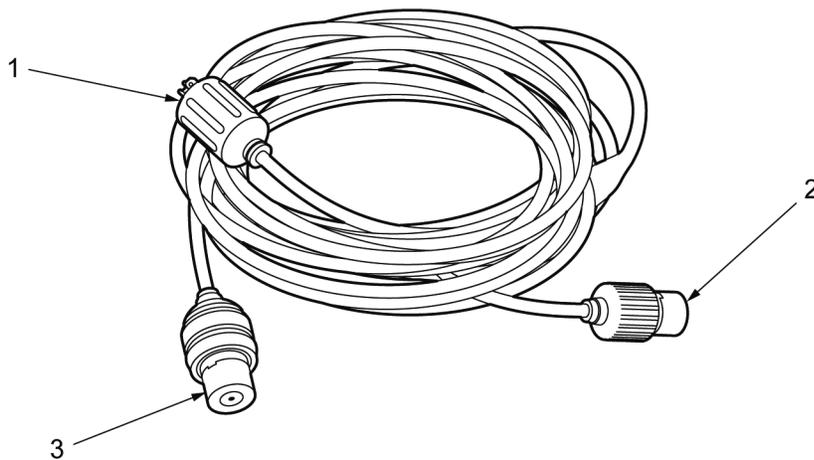

Figure 4. Replacing the Power Cable Assembly.

**Installation**

1. Connect plug (Figure 4, Item 2) to the pump assembly receptacle located on the pump assembly switch box.
2. Connect plug (Figure 4, Item 3) to the power receptacle on the water heater. The receptacle is located on the top front of the water heater.
3. Connect the plug (Figure 4, Item 1) to the receptacle at the power supply source.

**END OF TASK**

**END OF WORK PACKAGE**

## OPERATOR INSTRUCTIONS

### SHOWER FRAME ASSEMBLY REPLACE

#### INITIAL SETUP:

##### Tools and Special Tools

None required.

##### References

WP 0005

##### Personnel Required

Shower/Laundry and Clothing Repair Specialist,  
(92S) - 3

##### Equipment Condition

Shower not in use  
System powered off and pressure relieved  
Water drained from shower

#### REPLACE

##### Removal

If a shower frame is damaged beyond repair, replace the shower frame as follows:

1. If removing a frame from an end shower stall, remove the shower door (Figure 1) from that end of the shower.
2. If removing a frame assembly from the end shower stall to which the water supply hose is connected, disconnect the supply hose.
3. Disconnect the shower head assembly connection hose from the shower head manifold (Figure 1) of the affected shower stall.
4. Disconnect the shower connection hoses from the shower head manifold assembly of the two adjacent shower stalls.

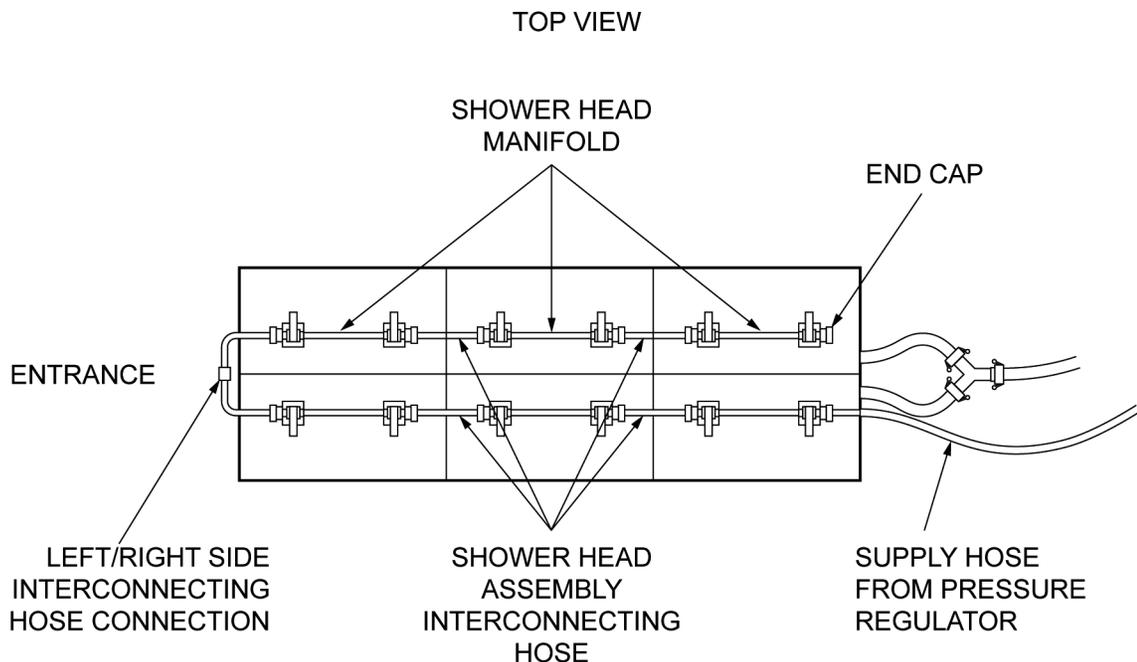

Figure 1. Disconnecting the Shower Head Assemblies.

5. From inside the shower, disconnect the hook and loop strips at the top of the shower frame that secure the affected frame assembly to the opposing frame assembly.
6. Disconnect all of the exterior hook and loop straps used to secure the affected shower cabinet and frame assembly to its shower cabinet support poles.

**SHOWER FRAME ASSEMBLY REPLACE - (CONTINUED)**

7. Remove the outside center shower cabinet and frame assembly support pole.
8. A large hook and loop strip is sewn along the bottom (skirt) of the shower cabinet (Figure 2) and is used to secure the bottom of the shower cabinet to the back of the shower base. Separate the hook and loop strip from the back of the shower base.

Figure 2. Shower Base to Shower Cabinet Hook and Loop Connection.

**WARNING**

Be sure to use at least two operators to lift the shower cabinet and frame assembly. Failure to follow this warning may result in serious injury to personnel.

9. Confirm that all associated hook and loop strips and shower head assemblies have been disconnected, then lift the affected shower frame, together with its shower cabinet, from the support poles (Figure 3).
10. Remove the shower frame from the shower cabinet.

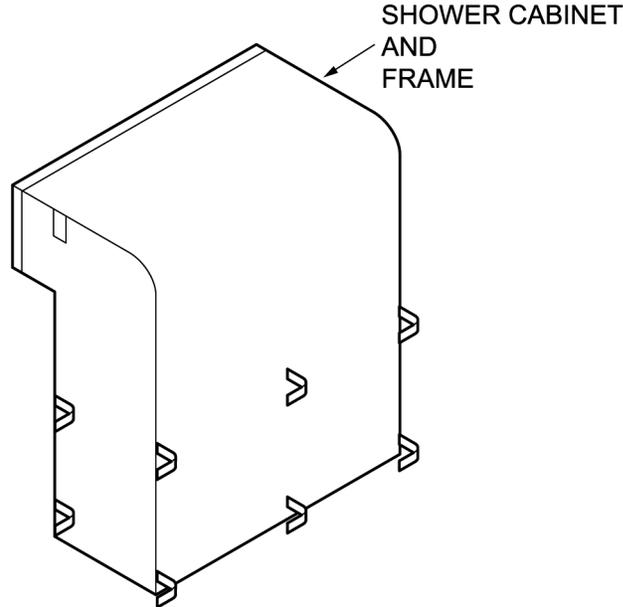

**SHOWER FRAME ASSEMBLY REPLACE - (CONTINUED)**

Figure 3. Shower Cabinet and Frame Assembly.

**Installation**

1. Lay the shower cabinet on the ground with the outside of the cabinet facing down
2. Position the new shower frame on the shower cabinet (opposite side of where the shower head is installed) and carefully guide the three outer legs through openings in back of shower cabinet (Figure 4).
3. Pull the shower frame up as shown in (Figure 4) and pull the shower cabinet skirt up so that the cabinet hook and loop strip that runs along the length of the cabinet skirt is above the height of the frame.
4. Hook and loop strips are sewn in place on both the outside and inside of the shower cabinet. Attach the hook and loop strips at each position on the inside of the cabinet to the shower frame (Figure 4).

**WARNING**

Be careful when installing the shower frame legs onto the shower cabinet support poles not to put your fingers directly on the location where the frame legs and support posts join. Severely pinched finger may result. Failure to follow this warning may cause injury to personnel.

5. Install outer center shower cabinet support pole.
6. From the inside, lift the shower frame and cabinet and install the assembly onto the shower cabinet support poles. Note that the two outer shower cabinet support poles should be on the outside of the shower cabinet.
7. Secure the shower cabinet to shower the cabinet support poles (Figure 5) using the attached hook and loop strips.
8. Secure the shower cabinets to the inside of each shower base using attached hook and loop strips on the bottom skirt of the shower cabinet.

SHOWER FRAME ASSEMBLY REPLACE - (CONTINUED)

Figure 4. Assembling the Shower Cabinet and Frame.

**SHOWER FRAME ASSEMBLY REPLACE - (CONTINUED)****WARNING**

Be sure to use at least two operators to lift the shower cabinet and frame assembly. Failure to follow this warning may result in serious injury to personnel.

9. Install the shower cabinet together with its shower frame (Figure 5 ) onto the installed cabinet support poles.
10. A large hook and loop strip is sewn along the bottom (skirt) of the shower cabinet and is used to secure the bottom of the shower cabinet to the back of the shower base. Attach the hook and loop strip to the back of the shower base.
11. Install the outside center shower cabinet support pole.
12. Attach all of the exterior hook and loop strips (Figure 5) to the shower cabinet support poles (Figure 5).

Figure 5. Assembling the Shower Cabinet to Supporting Poles.

13. Connect the shower head assembly connection hoses to the shower head assembly manifold connections. (Figure 1).
14. From inside the shower, connect the hook and loop strips at the top of the shower frame used to secure the cabinet and frame assembly to the opposing cabinet and frame assembly.
15. If it is an end cabinet and frame assembly being installed, and it is the cabinet through which the water supply hose must be connected, connect the supply hose.
16. Start the shower, referring to the start-up procedures in WP 0005.

**END OF TASK**

**END OF WORK PACKAGE**

## OPERATOR INSTRUCTIONS

### SHOWER BASE ASSEMBLY REPLACE

---

**INITIAL SETUP:****Personnel Required**

Shower/Laundry and Clothing Repair Specialist,  
(92S) - 2

**Equipment Condition**

Shower powered down  
All water drained from the shower.

**References**

WP 0005

---

**REPLACE****Removal**

If a shower base is damaged beyond repair, replace the shower base as follows:

1. If removing an end cabinet, remove the shower door (Figure 1) from that end of the shower.
2. If removing the end cabinet to which the water supply hose is connected, disconnect the supply hose.
3. Disconnect and remove the shower head assembly (Figure 1) and all connecting hoses from the affected shower stall and the shower head assemblies from the two adjacent shower stalls.
4. From inside the shower, disconnect the hook and loop strips at the top of the shower frame that secure the affected cabinet and frame assembly to the opposing cabinet and frame assembly.
5. The shower floor panels (Figure 1) are secured to the shower bases using hook and loop strips. Detach the hook and loop strips and remove the floor panel from the shower base.
6. Disconnect all of the exterior hook and loop strips (Figure 1) used to secure the affected shower cabinet to its shower cabinet support poles (Figure 1).
7. Remove the outside center shower cabinet support pole.
8. A large hook and loop strip is sewn along the bottom (skirt) of the shower cabinet and is used to secure the bottom of the shower cabinet to the back of the shower base. Separate the hook and loop strip from the back of the shower base.

**WARNING**

Be sure to use at least two operators to lift the shower cabinet and frame assembly. Failure to follow this warning may result in serious injury to personnel.

9. Confirm that all associated hook and loop strips and shower head assemblies have been disconnected and/or removed, then remove the affected shower cabinet together with its shower frame (Figure 2).
10. Place the shower cabinet and frame assembly out of the way so that it does not interfere with the removal of the shower base.
11. Remove all of the remaining shower cabinet support poles from the affected shower base (Figure 1).

SHOWER BASE ASSEMBLY REPLACE - (CONTINUED)

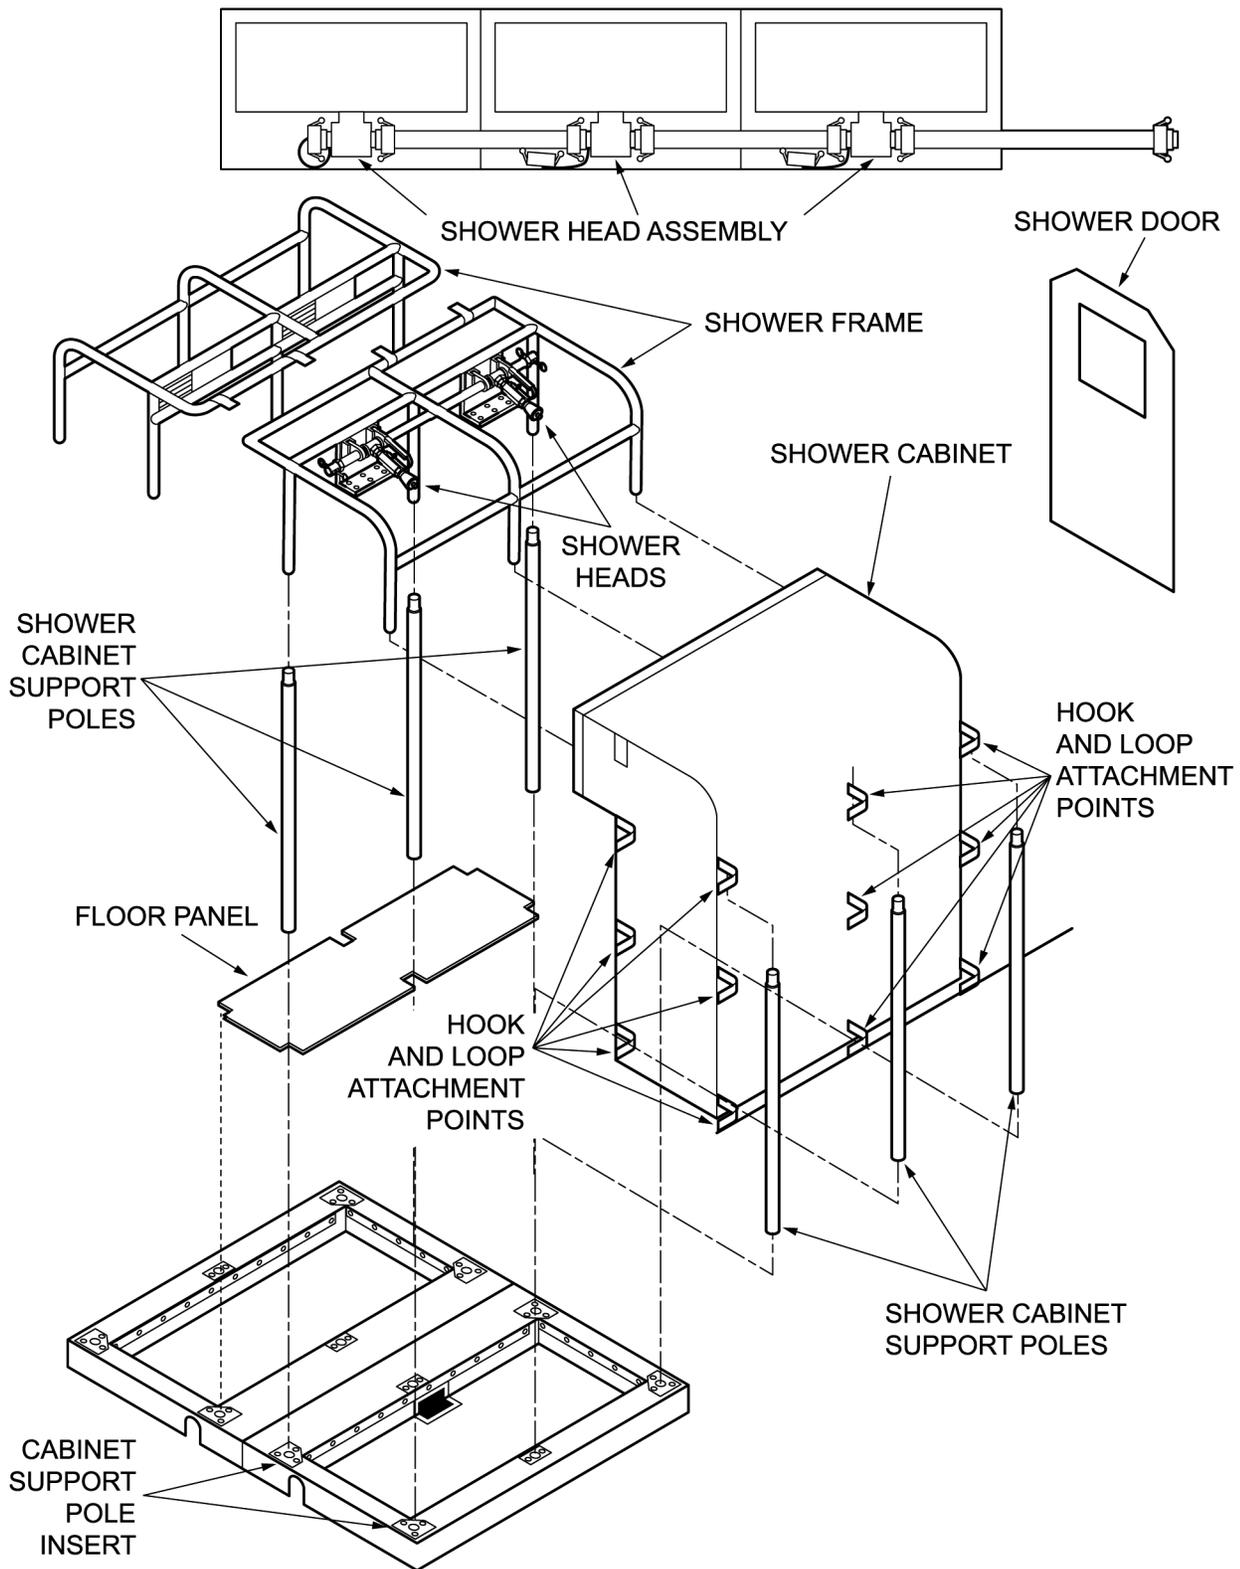

Figure 1. Replacing the Shower Base.

**SHOWER BASE ASSEMBLY REPLACE - (CONTINUED)**

12. Using one operator, lift the back of the shower base up to the extent that the second operator can easily reach the drain hose connections (Figure 1).
13. Disconnect the two drain hoses from the two connection points at the center of the shower base (Figure 1). If the base being replaced is an end base on the opposite side of where the pump assembly is located, remove the end cap from the last hose connection point so that it can be installed onto the new shower base.

**WARNING**

Be sure to use at least two operators when lifting the shower base from the shower. Failure to follow this warning may result in serious injury to personnel.

14. Lower the back of the shower base down to the extent that the drain hoses will have clearance from the shower base when the shower base is removed from the shower. Using two operators, lift the entire shower base as straight up as possible and remove it from the shower. Be sure that the drain hoses below the shower base do not interfere with the shower base when lifting.

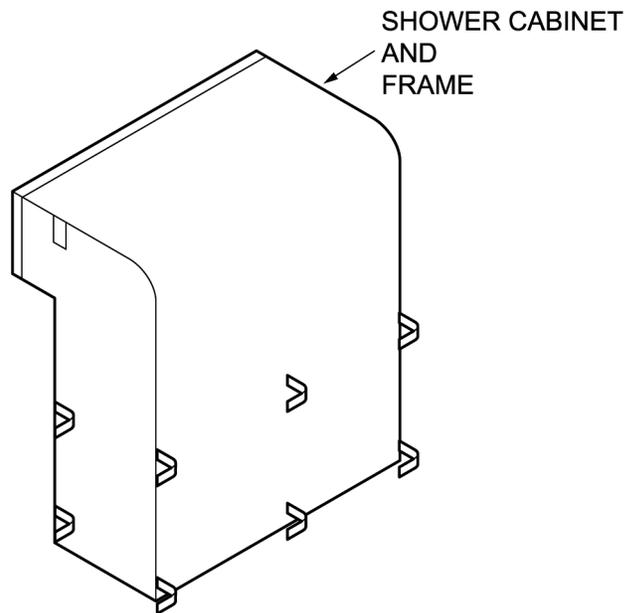

Figure 2. Shower Base and Frame Assembly.

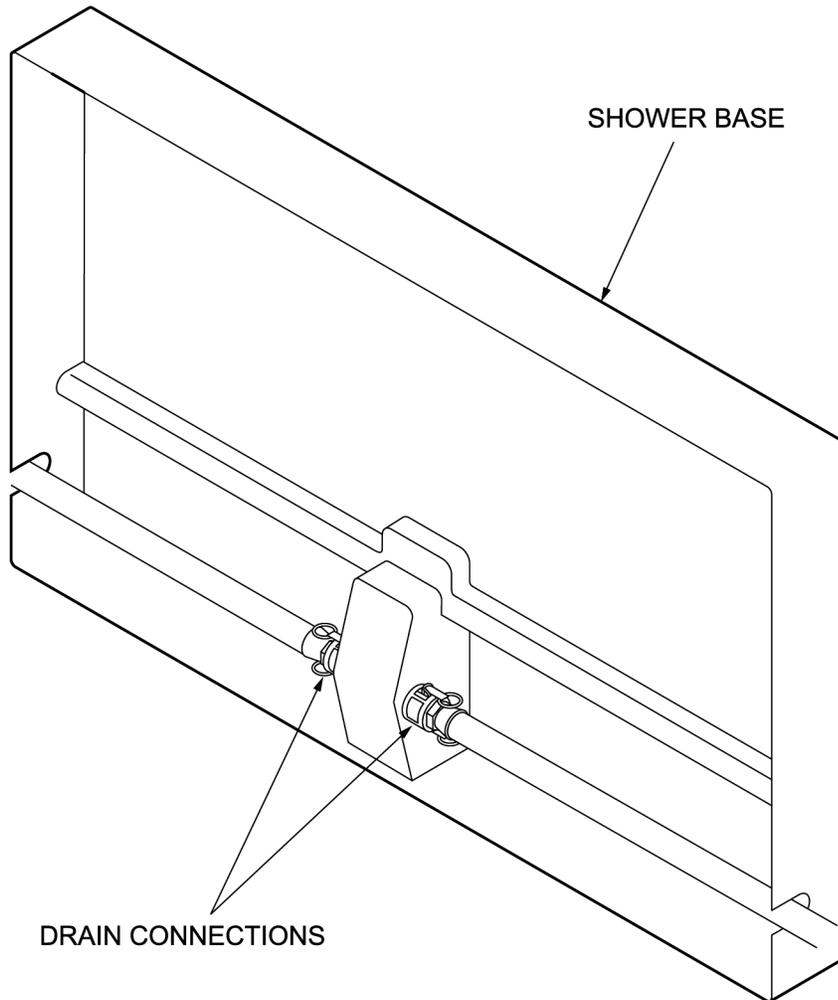

**SHOWER BASE ASSEMBLY REPLACE - (CONTINUED)**

Figure 3. Disconnecting and Connecting the Drain Hoses.

**Installation****CAUTION**

Be careful when lowering the shower base into place that the pass-through holes in the base align properly with the drain hoses below. Ensure that all shower bases are level with each other.

1. Drain hose pass-through holes on each end of the shower base provide clearance to allow the drain hoses to be routed under the shower base. Lower the new shower base into the location where the old shower base was installed, making sure that the pass-through holes are lowered over and properly align with the drain hoses.
2. Using one operator, lift the back of the shower base up to the extent that the second operator can easily reach the drain hose connections (Figure 1).
3. Connect the two drain hoses to the two connection points at the center of the shower base (Figure 3). If the base being replaced is an end base on the opposite side of where the pump assembly is located, install the end cap on the last hose connection point.
4. Lower shower base into place, ensuring that drain hoses are in the pass-through holes in the shower base.
5. Install 5 shower cabinet support poles into the new base (Figure 1). Do not install the outside center support pole at this time.

**SHOWER BASE ASSEMBLY REPLACE - (CONTINUED)****WARNING**

Be sure to use at least two operators to lift the shower cabinet and frame assembly. Failure to follow this warning may result in serious injury to personnel.

**WARNING**

Be careful when installing the shower frame legs onto the shower cabinet support poles not to put your fingers directly on the location where the frame legs and support posts join. Severely pinched fingers may result. Failure to follow this warning may cause injury to personnel.

6. Install the shower cabinet together with its shower frame (Figure 1 ) onto the installed cabinet support poles.
7. A large hook and loop strip is sewn along the bottom (skirt) of the shower cabinet and is used to secure the bottom of the shower cabinet to the back of the shower base. Attach the hook and loop strip to the back of the shower base.
8. Install the outside center shower cabinet support pole.
9. Attach all of the exterior hook and loop strips (Figure 1) to the shower cabinet support poles.(Figure 1).
10. If installing an end cabinet, install the shower door (Figure 1) to the end of the shower.
11. Install and connect the shower head assemblies (Figure 1) with hoses.
12. From inside the shower, connect the hook and loop strips at the top of the shower frame used to secure the cabinet and frame assembly to the opposing cabinet and frame assembly.
13. Using the hook and loop strips attached to the floor panel (Figure 1), install the floor panel onto the shower base.
14. If the end cabinet being installed is the cabinet to which the water supply hose must be connected, connect the supply hose.
15. Start the shower, referring to the start-up procedures in WP 0005.

**END OF TASK**

**END OF WORK PACKAGE**

## OPERATOR INSTRUCTIONS

### SHOWER STALL ASSEMBLY REPLACE

#### INITIAL SETUP:

##### Personnel Required

Shower/Laundry and Clothing Repair Specialist,  
(92S) - 3

##### Equipment Condition

System powered off and water pressure relieved.

##### References

WP 0005

#### SHOWER CABINET REPLACEMENT

##### Removal

If a shower cabinet is damaged beyond repair, replace the shower cabinet as follows:

1. If removing a cabinet from an end shower stall, remove the shower door from that end of the shower.
2. If removing a cabinet from the end shower stall to which the water supply hose is connected, disconnect the supply hose.
3. Disconnect the shower head assembly connection hoses from the shower head manifold (Figure 1) of the affected shower cabinet stall.
4. Disconnect the shower connection hoses from the shower head manifold assembly of the two adjacent shower stalls.

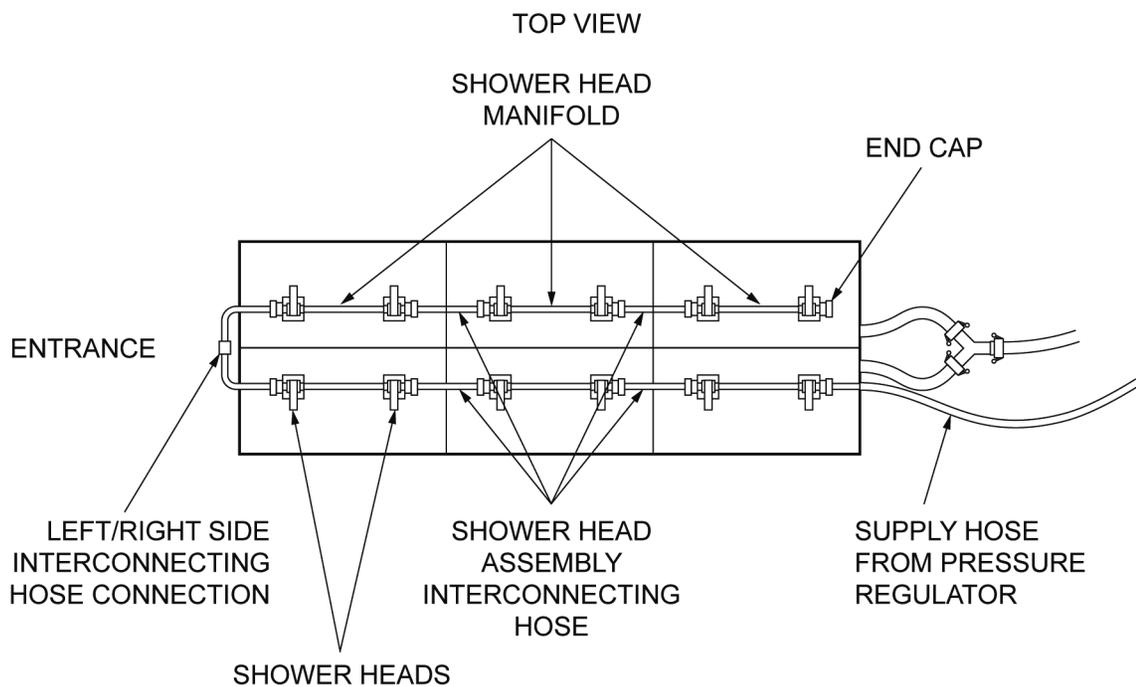

Figure 1. Disconnecting the Shower Head Assemblies.

5. From inside the shower, disconnect the hook and loop strips at the top of the shower frame that secure the affected cabinet and frame assembly to the opposing cabinet and frame assembly.
6. Disconnect all of the exterior hook and loop strips used to secure the affected shower cabinet and its shower cabinet support poles.
7. Remove the outside center shower cabinet support pole.

**SHOWER STALL ASSEMBLY REPLACE - (CONTINUED)**

8. A large hook and loop strip is sewn along the bottom (skirt) of the shower cabinet (Figure 2) and is used to secure the bottom of the shower cabinet to the back of the shower base. Separate the hook and loop strip from the back of the shower base.

Figure 2. Shower Base to Shower Cabinet Hook and Loop Connection.

**WARNING**

Be sure to use at least two operators to lift the shower cabinet and frame assembly. Failure to follow this warning may result in serious injury to personnel.

9. Confirm that all associated hook and loop strips and shower head assemblies have been disconnected, then lift the affected shower frame, together with its shower cabinet, from the support poles (Figure 3).
10. Remove the shower frame from the shower cabinet.

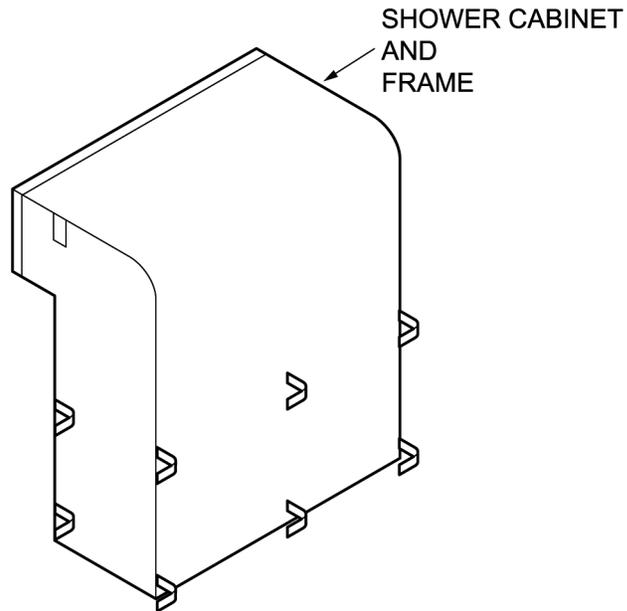

**SHOWER STALL ASSEMBLY REPLACE - (CONTINUED)**

Figure 3. Shower Cabinet and Frame Assembly.

**Installation**

1. Lay the replacement shower cabinet on the ground with the outside of the cabinet facing down (Figure 4).
2. Position the shower frame on the shower cabinet (opposite side of where the shower head is installed) and carefully guide the three outer legs through openings in back of shower cabinet (Figure 4).
3. Pull the shower frame up (Figure 4) and pull the shower cabinet skirt up so that the cabinet hook and loop strip that runs along the length of the cabinet skirt is above the height of the frame.
4. Hook and loop strips are sewn in place on both the outside and inside of the shower cabinet. Attach the hook and loop strips at each position on the inside of the cabinet to the shower frame (Figure 4).
5. From the inside, lift the shower frame and cabinet and install the assembly onto the shower cabinet support poles. Note that the two outer shower cabinet support poles should be on the outside of the shower cabinet.

**WARNING**

Be careful when installing the shower frame legs onto the shower cabinet support poles not to put your fingers directly on the location where the frame legs and support poles join. Severely pinched fingers may result. Failure to follow this warning may cause injury to personnel.

---

**SHOWER STALL ASSEMBLY REPLACE - (CONTINUED)****WARNING**

Be sure to use at least two operators to lift the shower cabinet and frame assembly. Failure to follow this warning may result in serious injury to personnel.

6. Install outer center shower cabinet support pole.
7. Secure the shower cabinet to the shower cabinet support poles (Figure 4) using the attached hook and loop strips.
8. Secure the shower cabinets to the inside of each shower base using attached hook and loop strips on the bottom skirt of the shower cabinet.

SHOWER STALL ASSEMBLY REPLACE - (CONTINUED)

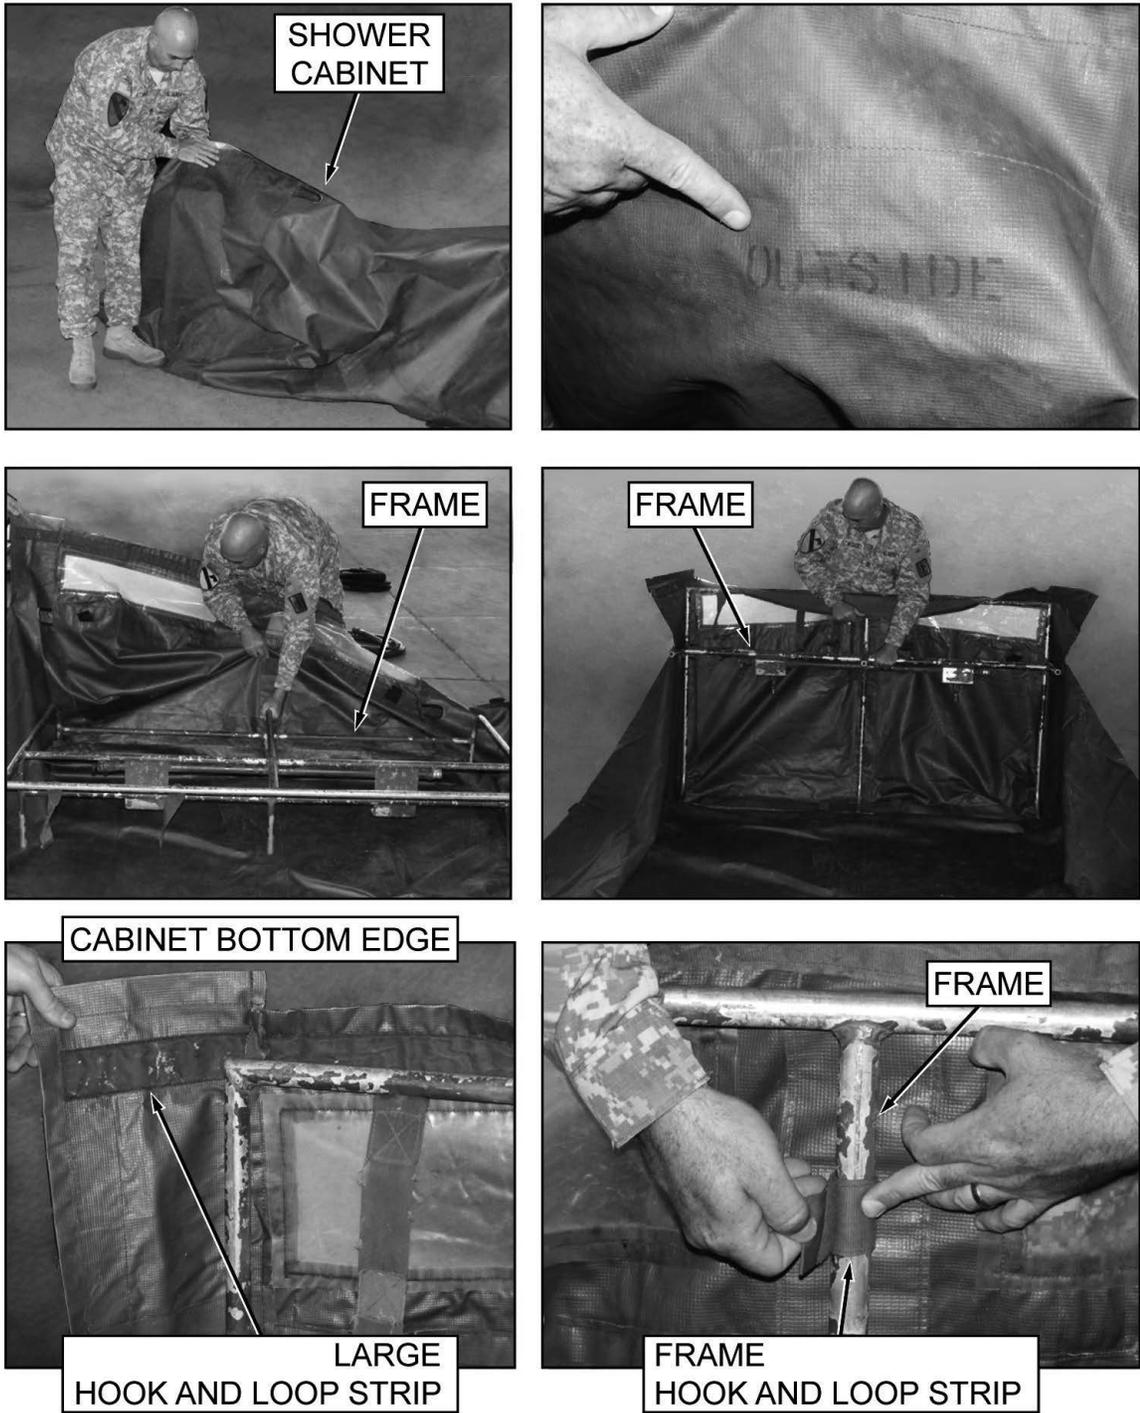

Figure 4. Assembling the Shower Cabinet and Frame.

**SHOWER STALL ASSEMBLY REPLACE - (CONTINUED)**

Figure 5. Attaching the Shower Cabinet to Supporting Poles.

9. Connect the shower head assembly connection hoses to the shower head manifold assembly (Figure 1).
10. From inside the shower, connect the hook and loop strips at the top of the shower frame used to secure the cabinet and frame assembly to the opposing cabinet and frame assembly.
11. If it is an end cabinet and frame assembly being installed, and it is the cabinet through which the water supply hose must be connected, connect the supply hose.
12. Start the shower, referring to the start-up procedures in WP 0005.

**END OF TASK****SHOWER CABINET FLOOR PANEL REPLACEMENT****Removal****WARNING**

Be careful when walking on wet surfaces. Wet surfaces can be slippery. Failure to heed this warning may result in injury to personnel.

1. Release hook and loop strips securing shower cabinet floor panel (Figure 6, Item 1) to shower base (Figure 6, Item 2).
2. Lift the shower cabinet floor panel up along the interior shower cabinet support poles and remove.

**Installation**

1. Lower shower cabinets floor panel (Figure 6, Item 1) into place along interior shower cabinet support poles.
2. Secure floor panels to shower base (Figure 6, Item 2) using attached hook and loop strips.

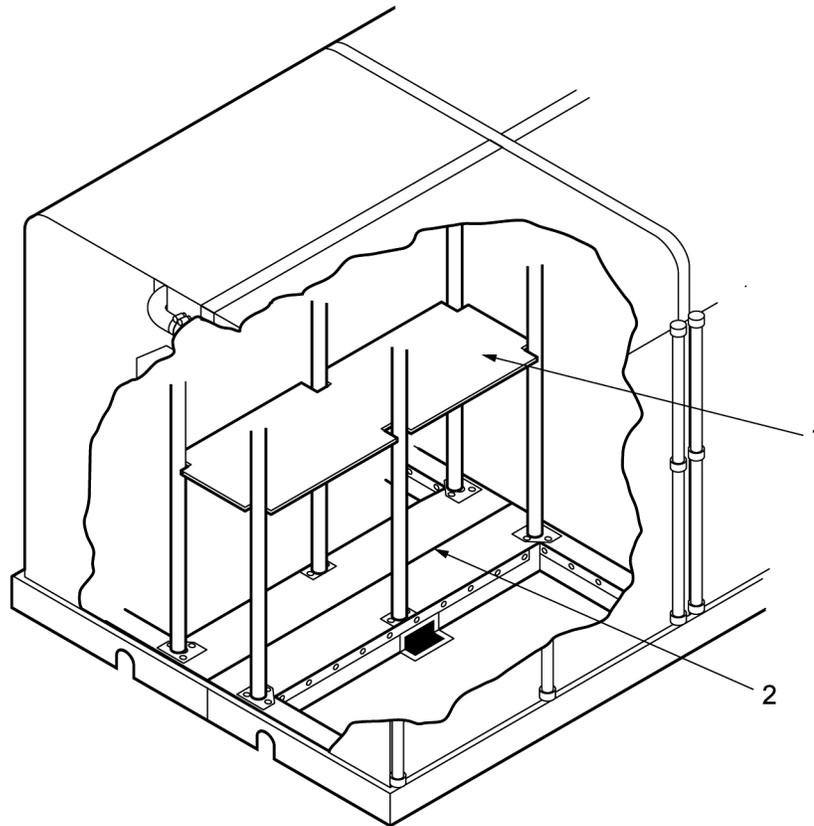

**SHOWER STALL ASSEMBLY REPLACE - (CONTINUED)**

Figure 6. Replacing the Floor Panels.

**END OF TASK****SHOWER CABINET SUPPORT POLE REPLACEMENT****Removal****NOTE**

For convenience, replace only one shower cabinet support pole at a time to avoid having to remove shower cabinet and shower frame.

1. Release hook and loop strips securing shower cabinet (Figure 7, Item 4) to shower base (Figure 7, Item 3).
2. Release hook and loop strips (Figure 7, Item 5) from shower cabinet support pole (Figure 7, Item 2) being removed.
3. Lift shower frame (Figure 7, Item 1) as necessary and remove shower cabinet support pole (Figure 7, Item 2).

**Installation**

1. Lift shower frame (Figure 7, Item 1) as necessary and install shower cabinet support pole (Figure 7, Item 2).
2. Secure shower cabinet (Figure 7, Item 4) to shower cabinet support pole (Figure 7, Item 2) using attached hook and loop strips (Figure 7, Item 5).

**SHOWER STALL ASSEMBLY REPLACE - (CONTINUED)**

- Secure shower cabinet (Figure 7, Item 4) to inside of shower base (Figure 7, Item 3) using attached hook and loop strips.

---

**INTRODUCTION**

This work package contains the basic requirements and instructions to place the 12-Head Shower System into administrative storage and to prepare the item for shipment. Refer to WP 0005 for procedures on disconnecting, disassembling, and packing the shower. If the shower requires cleaning prior to disassembly and packing, refer to WP 0014.

**ADMINISTRATIVE STORAGE**

Administrative storage is the placement of materiel in a limited care and preservation status for short periods of time. Units may consider administrative storage of equipment should certain conditions exist. Refer to AR 750-1 for further instructions concerning administrative storage and any other specific requirements.

**END OF TASK****PREPARATION FOR SHIPMENT**

1. Unit shall perform required Preventive Maintenance Checks and Services (PMCS) in accordance with this technical manual to identify and correct any deficiencies and/or shortcomings with equipment. Unit will initiate any Maintenance Work Orders (MWO) required to bring equipment to TM 10/20 in accordance with AR 750-1 prior to shipment.
2. Refer to AR 750-1 for further instructions prior to the shipment of equipment.

Tag, Marker (Item 11, WP 0054)

**Equipment Condition**

Water drained from shower  
Shower powered off ( WP 0005)  
Shower disconnected from power source  
Input power connector disconnected from power source.

**Personnel Required**

Shower/Laundry and Clothing Repair Specialist, (92S) - 1

**TESTING POWER CABLE ASSEMBLY CONTINUITY****WARNING**

Never work on electrical equipment unless there is another person nearby who is familiar with the operation and hazards of the equipment and who is competent in administering first aid. When the technician is aided by operators, he must warn them about dangerous areas.

Be careful not to contact high-voltage connections of 115-volt ac input connections when installing or operating this equipment.

Whenever the nature of the operation permits, keep one hand away from the equipment to reduce the hazard of current flowing through vital organs of the body.

Do not disconnect power cables when power is on or generator set is operating.

Failure to follow this warning may result in serious injury or death to personnel.

1. Using a multimeter set to measure continuity, check between each power cable assembly contact point (Figure 1, Items 1, 2, and 3) and the contact point of the corresponding connector or loose lead on the other end of the cable.
2. Replace the power cable if no continuity is indicated on any one lead. If the input power cable does not pass the continuity check, replace the input power cable, referring to the disassembly/assembly procedures in this work package.

Shower is shut down

---

This work package includes procedures for all components that can be removed from and installed on the shower frame assembly. Repair, however, is limited to the replacement of defective, missing, or damaged components. Disassemble only to the extent necessary to replace a particular component.

**SHOWER FRAME ASSEMBLY REPAIR****Disassemble****WARNING**

The shower head manifold assembly will be loose when the U-bolts are removed and must be supported by hand to prevent the manifold from falling on and injuring personnel. Failure to follow this warning may cause injury to personnel.

1. Remove eight self-locking nuts (Figure 1, Item 1), flat washers (Figure 1, Item 2), 4 U-bolts (Figure 1, Item 11), and four pipe brackets (Figure 1, Item 7). Discard self-locking nuts.

**NOTE**

Two different shower heads can be used on the manifold assembly. Use the following procedures as necessary for the shower heads installed.

2. Remove two shower heads (Figure 1, Item 12), washers (Figure 1, Item 13), gaskets (Figure 1, Item 14), and adapter (Figure 1, Item 15).
3. Remove two valves (Figure 1, Item 16), nipples (Figure 1, Item 17), and bushings (Figure 1, Item 18).

## SHOWER FRAME ASSEMBLY REPAIR - (CONTINUED)

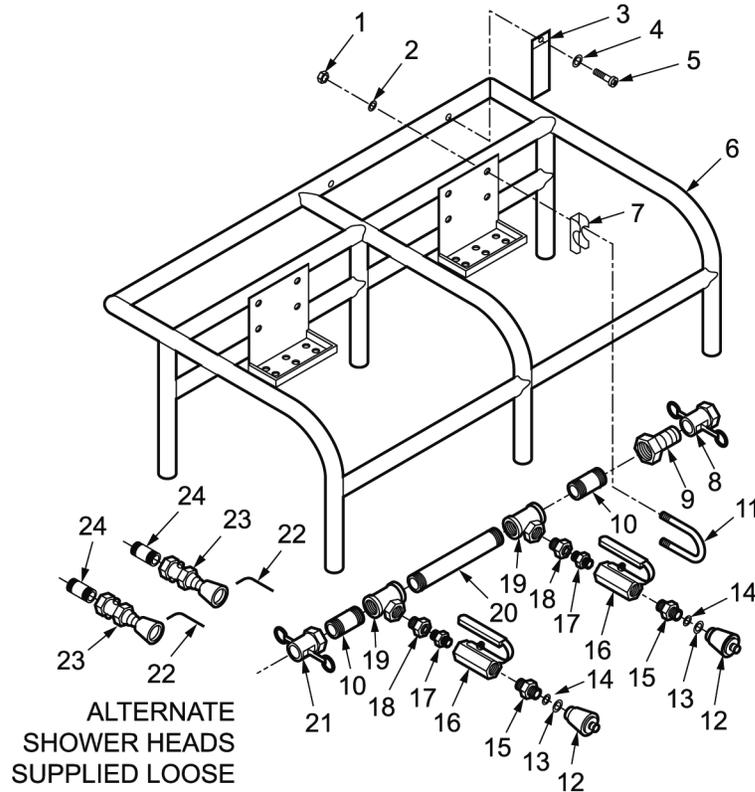

Figure 1. Shower Frame Repair.

4. If alternate shower heads are being used, loosen set screws as necessary using hex wrench (Figure 1, Item 22).
5. Remove two shower heads (Figure 1, Item 23) and nipples (Figure 1, Item 24).
6. Remove cap (Figure 1, Item 8) and couplings (Figure 1, Items 9 and 21).
7. Remove two nipples (Figure 1, Item 10) and tees (Figure 1, Item 19) from nipple (Figure 1, Item 20).

**Assemble**

1. Be sure any defective, missing, or damaged components have been replaced.
2. Install two Tees (Figure 1, Item 19). Be sure both tee side fittings are facing the same direction.
3. install nipples and couplings (Figure 1, Items 9 and 21) as illustrated.

**NOTE**

Two different shower heads can be used on the manifold. Use the following procedures as necessary for the shower heads installed.

4. Install bushings, nipples, and two valves (Figure 1, Item 16) as shown.
5. Install two adapters, gaskets (Figure 1, Item 14), washers (Figure 1, Item 13), and shower heads (Figure 1, Item 12).
6. If alternate shower heads are being used, install two nipples (Figure 1, Item 24) and shower heads (Figure 1, Item 23). Adjust shower heads as necessary and secure set screws using hex wrench (Figure 1, Item 22).
7. Place shower head manifold in place and secure using four pipe brackets (Figure 1, Item 7), four U-bolts (Figure 1, Item 11), eight flat washers (Figure 1, Item 2), and new self-locking nuts (Figure 1, Item 1).

**SHOWER FRAME ASSEMBLY REPAIR - (CONTINUED)**

8. Reconnect manifold connection hoses and secure the couplings.

Shower is powered off  
Water drained from shower

---

**NOTE**

Repair of the shower base is limited to the replacement of defective, missing, or damaged components listed in this work package. Disassemble only to the extent necessary to repair the item. If the shower base is cracked or perforated, the shower base must be replaced (WP 0017).

**SHOWER BASE ASSEMBLY REPAIR****Removing the Shower Base Grate**

1. Remove four screws (Figure 1, Item 3).
2. Remove grate (Figure 1, Item 2).

**Removing the Hook and Loop Strips**

1. Remove 30 screws (Figure 1, Item 4) and flat washers (Figure 1, Item 5).
2. Remove two hook and loop strips (Figure 1, Items 6 and 14) from the shower base.

**Removing the Shower Cabinet Support Pole Fittings**

1. Remove 12 screws (Figure 1, Item 7) and four support pole corner fittings (Figure 1, Item 8).
2. Remove four screws (Figure 1, Item 1) and two support pole side fittings (Figure 1, Item 15).

**Removing the Shower Base Coupling**

1. Stand the shower base (Figure 1, Item 9) on its side to access the coupling (Figure 1, Item 12), located on the underside of the shower base.
2. Remove chain (Figure 1 Item 10).
3. Remove cap (Figure 1, Item 11).

**CAUTION**

Take care when removing the coupling not to damage the shower base. If the shower base is cracked or perforated, the shower base must be replaced (WP 0017).

4. Remove coupling (Figure 1, Item 12).

## PORTABLE BATH UNIT BASE ASSEMBLY REPAIR - (CONTINUED)

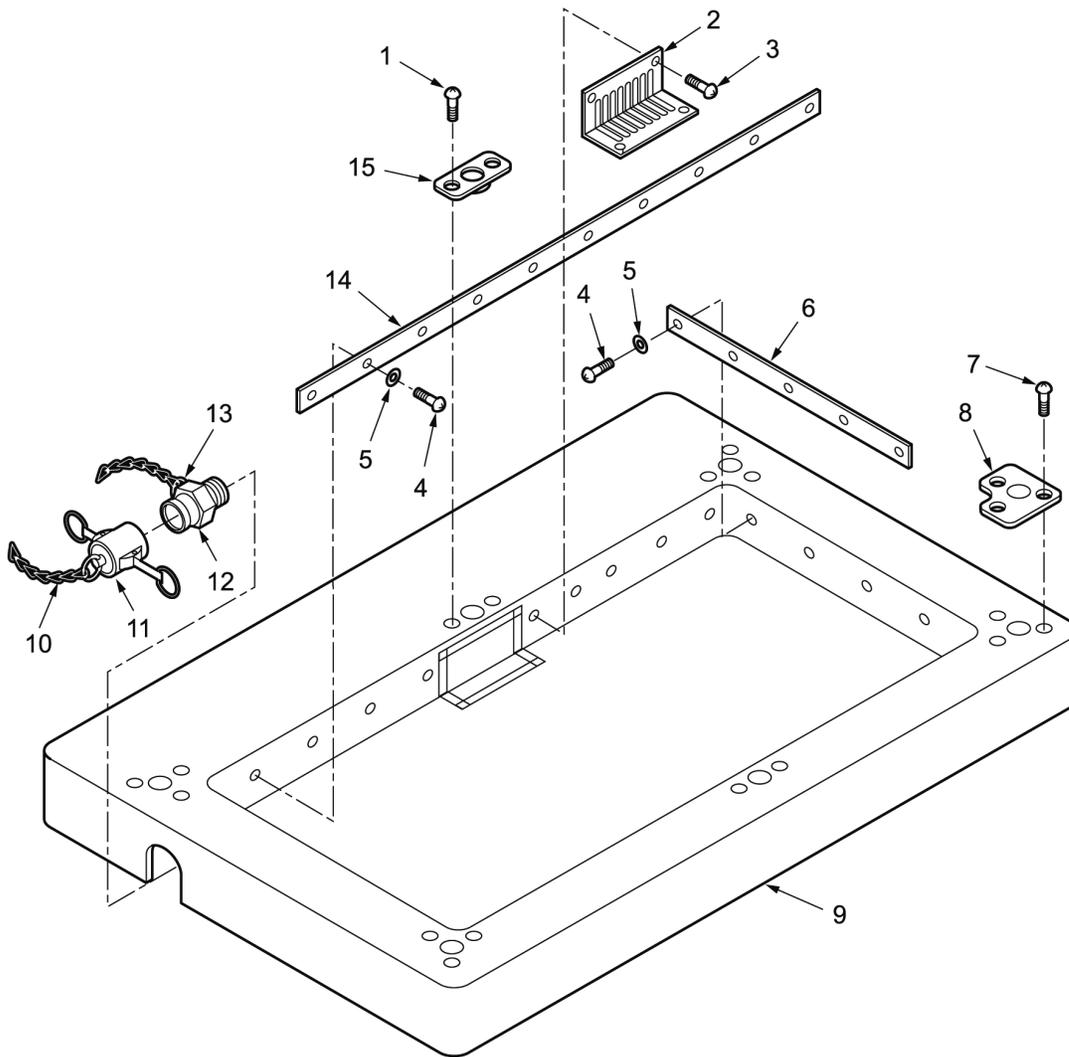

Figure 1. Repairing the Shower Base.

**Installing the Shower Base Coupling**

1. Be sure any defective, missing, or damaged components have been replaced.
2. Stand the shower base (Figure 1, Item 9) on its side to access coupling connection (Figure 1, Item 13), located on the underside of the shower base.

**CAUTION**

Take care when installing the coupling not to damage the shower base. If the shower base is cracked or perforated, the shower base must be replaced (WP 0017).

3. Install new coupling (Figure 1, Item 12).
4. Install cap (Figure 1, Item 11).
5. Install chain (Figure 1, Item 10).

**Installing Shower Cabinet Support Pole Fittings**

1. Install two cabinet support pole side fittings (Figure 1, Item 15) and secure using four screws (Figure 1, Item 1).

**PORTABLE BATH UNIT BASE ASSEMBLY REPAIR - (CONTINUED)**

2. Install four cabinet support pole corner fittings (Figure 1, Item 8) and secure using twelve (12) screws (Figure 1, Item 7).

**Installing Hook and Loop Strips**

1. Install two hook and loop strips (Figure 1, Items 6 and 14).
2. Secure using 30 screws (Figure 1, Item 4) and flat washers (Figure 1, Item 5).

**Installing the Shower Base Grate**

1. Install grate (Figure 1, Item 2).
2. Secure using four screws (Figure 1, Item 3).

Sealing Compound (Item 9, WP 0054)  
Self-Locking Nuts (4) (Item 3, WP 0055)  
Tag, Marker (Item 11, WP 0054)

**Equipment Condition**

Shower powered off  
Check valve removed from the water source.  
Shower not in use  
Input power shut down and connector disconnected from pump assembly switch box  
Water drained from shower

**Personnel Required**

Shower/Laundry and Clothing Repair Specialist, (92S) - 1

## SUPPLY PUMP ASSEMBLY REPLACEMENT

**Removal**

1. Disconnect the water supply hose from the supply pump inlet (Figure 1). The supply pump inlet is where the hose connects the supply pump and the water source.
2. Disconnect the water supply hose from the supply pump outlet (Figure 1). The supply pump outlet is the hose connected between the supply pump and the hot water heater.

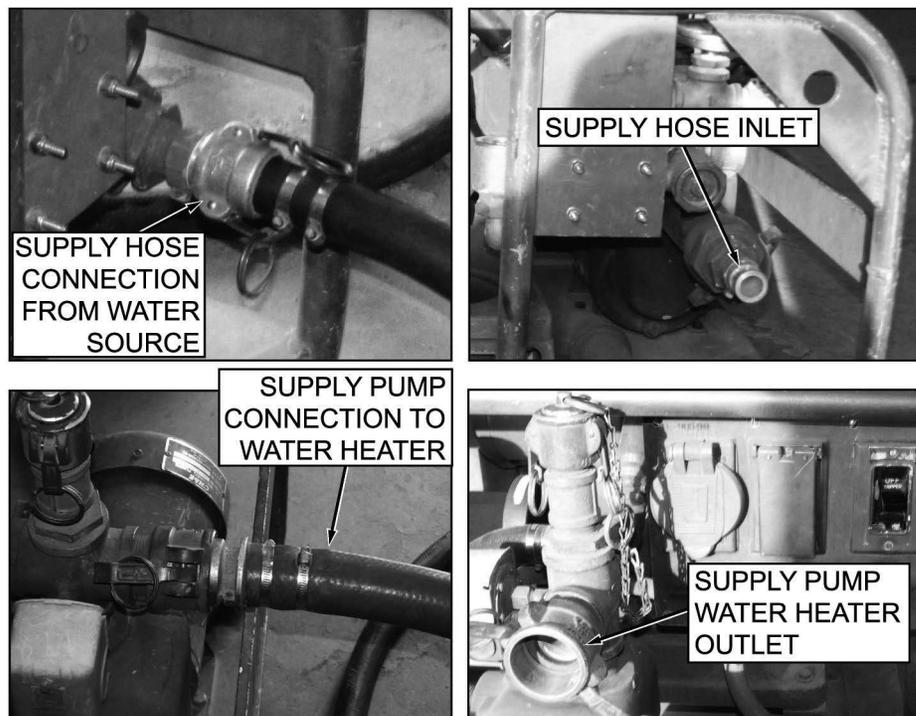

Figure 1. Disconnecting Supply Pump Hoses.

3. Remove the cold water supply hose that connects the supply pump and the temperature regulator (Figure 2).
4. Remove the cold water supply hose that connects the supply pump and the diaphragm tank (Figure 2).

## WATER PUMP ASSEMBLY REPLACE, REPAIR - (CONTINUED)

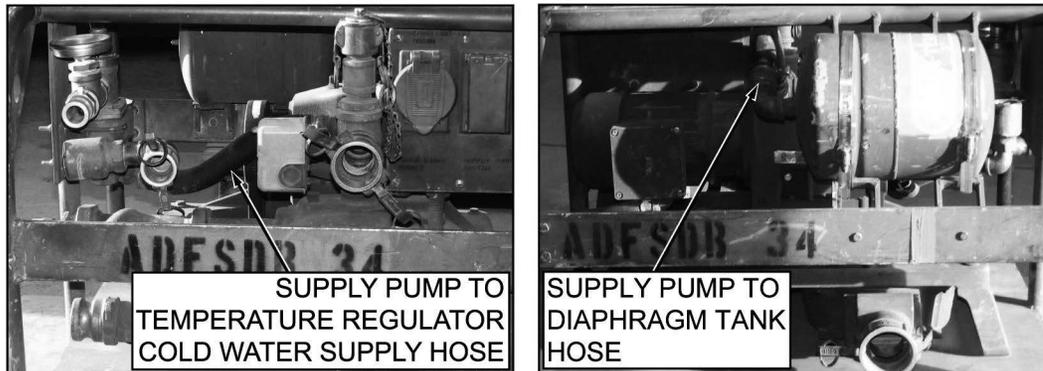

Figure 2. Removing Pump Assembly Hoses.

**WARNING**

Never work on electrical equipment unless there is another person nearby who is familiar with the operation and hazards of the equipment and who is competent in administering first aid. When the technician is aided by operators, he must warn them about dangerous areas.

Be careful not to contact high-voltage connections of 115-volt ac input connections when installing or operating this equipment.

Whenever the nature of the operation permits, keep one hand away from the equipment to reduce the hazard of current flowing through vital organs of the body.

Do not attempt to connect or disconnect power cables when power is on. Always confirm that power is disconnected from the shower before working on electrical equipment.

Failure to follow this warning may result in serious injury or death to personnel.

5. Tag and disconnect wire leads from supply pump motor (Figure 3, Item 6).
6. Remove six screws from plate on pressure switch and remove pressure switch from supply pump.
7. Remove conduit from pump, with wire leads inside, from one conduit elbow (Figure 3, Item 5) and remove conduit connector. Leave the other elbow loose.
8. Remove four self-locking nuts (Figure 3, Item 10), flat washers (Figure 3, Item 9), bolts (Figure 3, Item 7), flat washers (Figure 3, Item 8), and supply pump (Figure 3, Item 6).
9. Discard self-locking nuts.
10. Replace any defective, missing, or damaged components.

## WATER PUMP ASSEMBLY REPLACE, REPAIR - (CONTINUED)

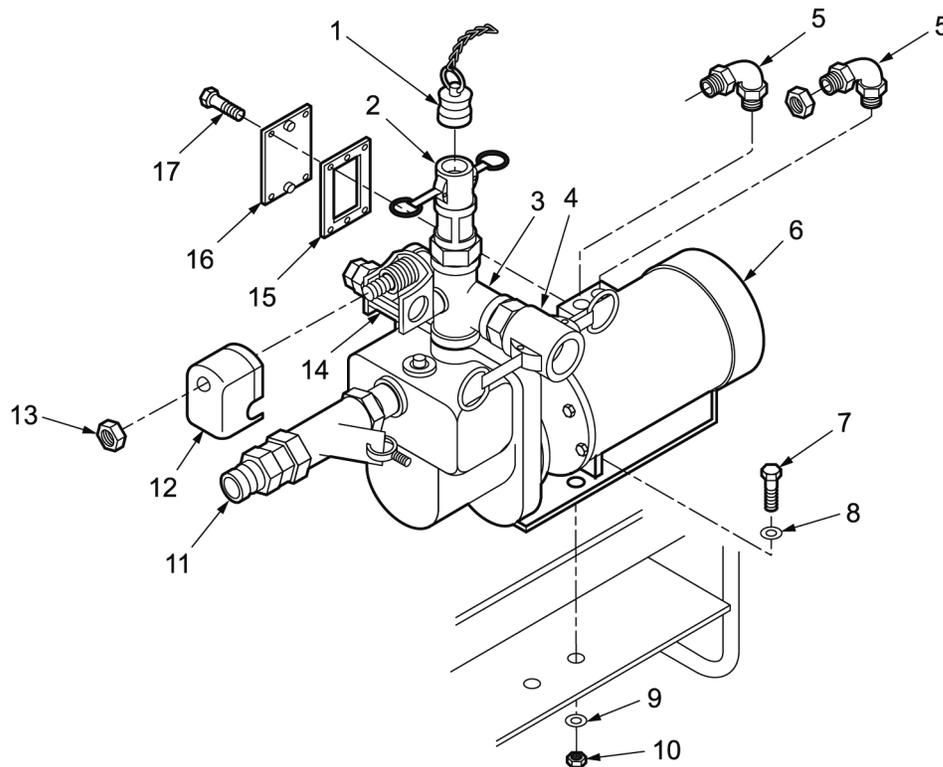

Figure 3. Replacing the Supply Pump.

**Installation**

1. Be sure any defective, missing, or damaged components have been replaced.
2. Install supply pump (Figure 3, Item 6) and align mounting holes.
3. Secure using four flat washers (Figure 3, Item 8), bolts (Figure 3, Item 7), and lock washers (Figure 3, Item 9).

**WARNING**

Never work on electrical equipment unless there is another person nearby who is familiar with the operation and hazards of the equipment and who is competent in administering first aid. When the technician is aided by operators, he must warn them about dangerous areas.

Be careful not to contact high-voltage connections of 115-volt ac input connections when installing or operating this equipment.

Whenever the nature of the operation permits, keep one hand away from the equipment to reduce the hazard of current flowing through vital organs of the body.

Do not attempt to connect or disconnect power cables when power is on. Always confirm that power is disconnected from the shower before working on electrical equipment.

**WATER PUMP ASSEMBLY REPLACE, REPAIR - (CONTINUED)**

Failure to follow this warning may result in serious injury or death to personnel.

4. Install conduit, with wire leads inside, into conduit connectors on box connector on centrifugal supply pump.
5. Install conduit connector (Figure 3, Item 5).
6. Connect wire leads to pressure switch (Figure 3, Item 14) and supply pump motor (Figure 3, Item 6) in accordance with the wire tagging done during removal. If necessary, refer to the electrical schematic in Figure 3.

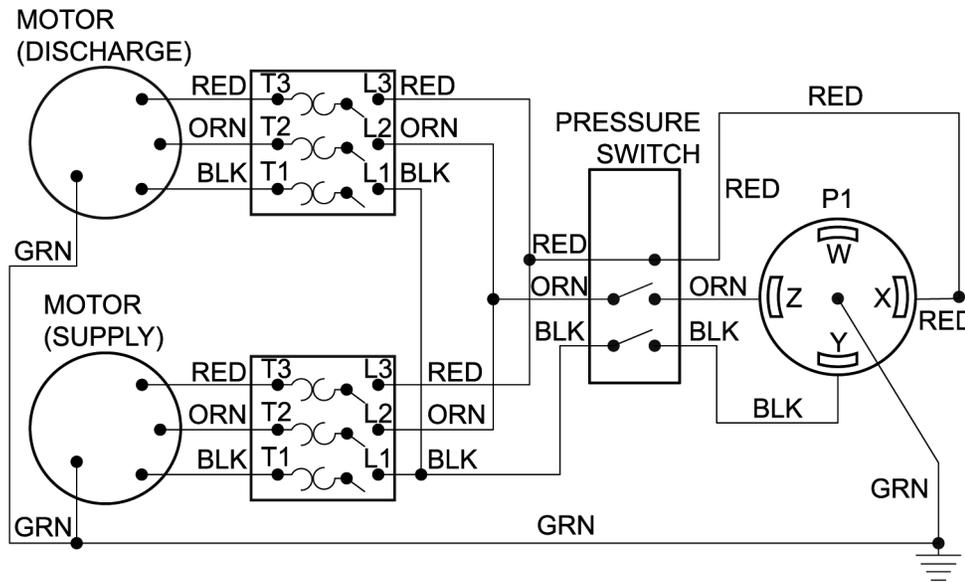

Figure 4. Electrical Schematic.

7. Remove tags.
8. Install gasket (Figure 3, Item 15), cover (Figure 3, Item 16), and four screws (Figure 3, Item 17).
9. Install the cold water supply hose between the supply pump and the temperature regulator (Figure 2).
10. Install the cold water supply hose between the supply pump and the diaphragm tank (Figure 2).
11. Connect the water supply hose to the supply pump inlet (Figure 1). The supply pump inlet is the hose connected between the supply pump and the water source.
12. Connect the water supply hose to the supply pump outlet (Figure 1). The supply pump outlet is the hose connected between the supply pump and the hot water heater.
13. Start up shower facility, referring to WP 0005.

**END OF TASK****CENTRIFUGAL PUMP UNIT REPLACEMENT****REMOVAL**

1. Remove the supply pump assembly as described above.
2. Remove 4 bolts and lock washers (Figure 5, Items 1 and 2) that attach the centrifugal pump unit (Figure 5, Item 3) to the side of the pump housing.

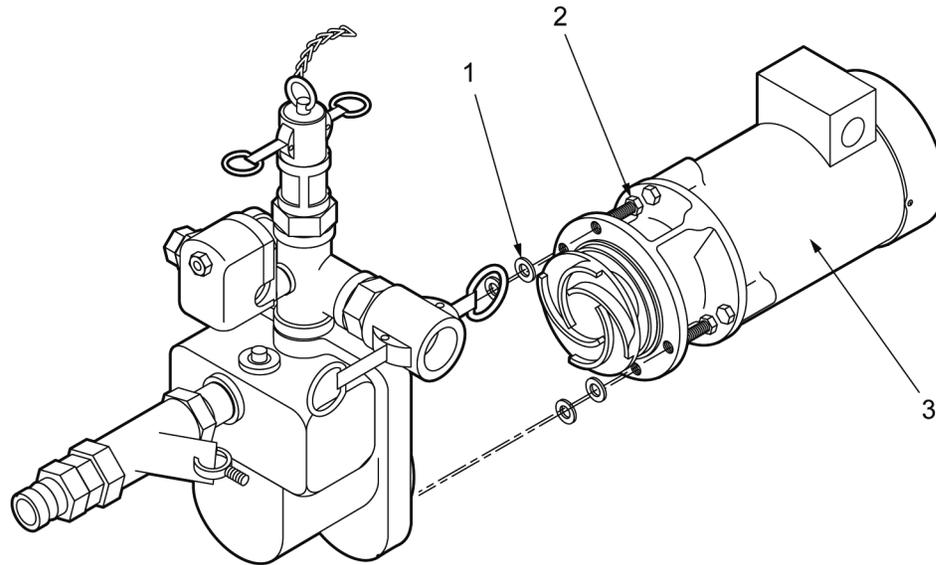

**WATER PUMP ASSEMBLY REPLACE, REPAIR - (CONTINUED)**

Figure 5. Centrifugal Pump Unit.

**REPLACEMENT**

1. Be sure any defective, missing, or damaged components have been replaced.
2. Attach centrifugal pump unit (Figure 5, Item 3) to the side of the pump housing, using 4 bolts and lock washers (Figure 5, Items 1 and 2).
3. Replace supply pump assembly as described above.

**END OF TASK****DIAPHRAGM TANK ASSEMBLY REPLACEMENT****REMOVE**

1. Disconnect cold line hose end from tee (Figure 6, Item 5).
2. Remove elbow with bushing (Figure 6, Item 3) attached.
3. Remove two clamps (Figure 6, Item 1) and diaphragm tank (Figure 6, Item 2) from bracket (Figure 6, Item 6).

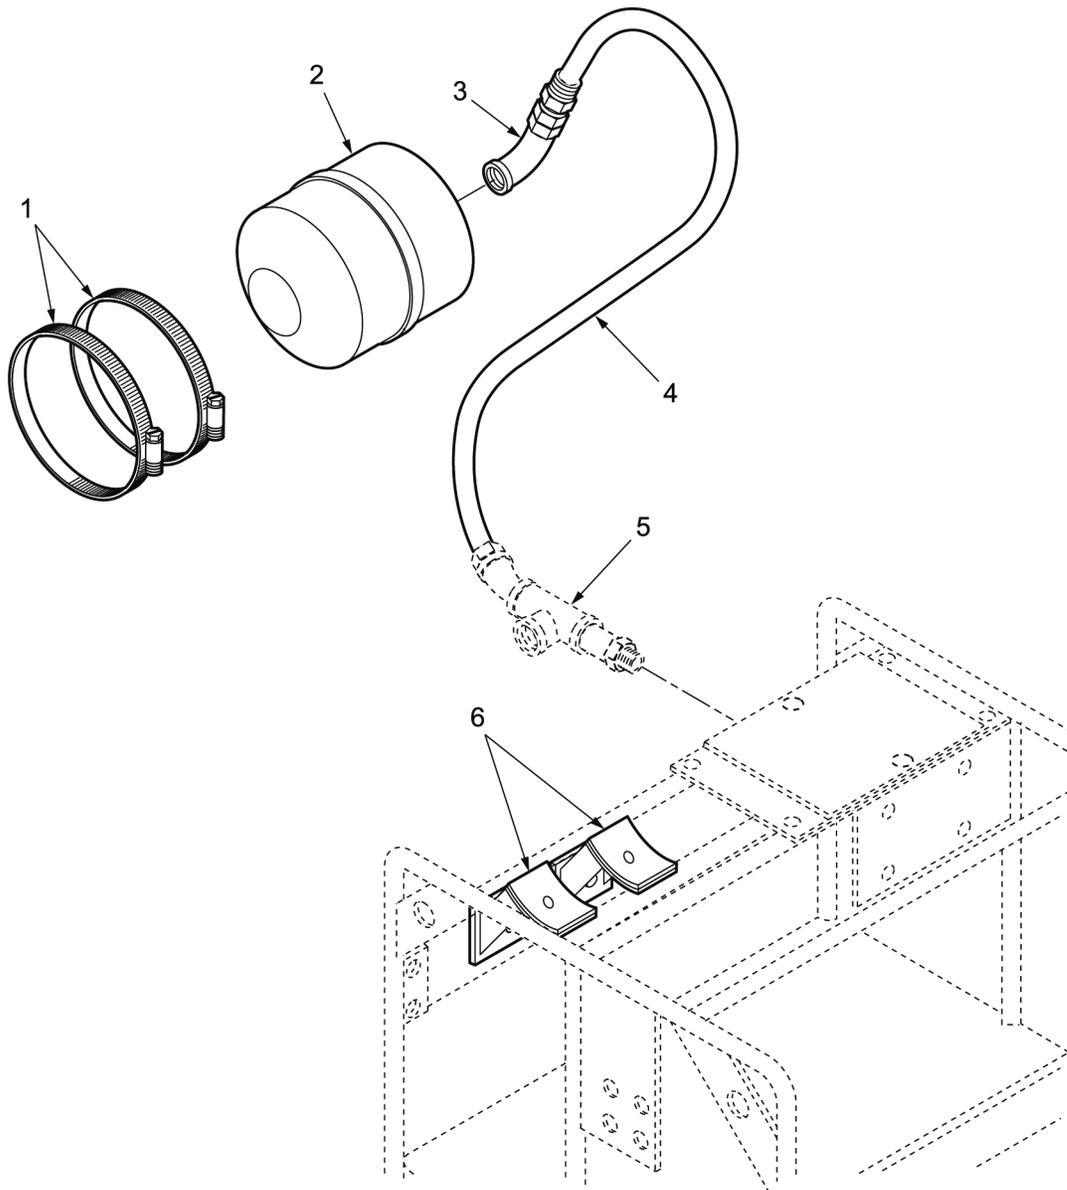

**WATER PUMP ASSEMBLY REPLACE, REPAIR - (CONTINUED)**

Figure 6. Replacing the Diaphragm Tank.

**INSTALL**

1. Ensure unserviceable diaphragm tank (Figure 6, Item 2) has been replaced.
2. Install diaphragm tank (Figure 6, Item 2).

**WARNING**

Ensure that fasteners on clamps for diaphragm tank are oriented downwards and do not stick out away from pump frame.

3. Secure using two clamps (Figure 6, Item 1).

---

**WATER PUMP ASSEMBLY REPLACE, REPAIR - (CONTINUED)****WARNING**

Sealing compounds are potentially dangerous to personnel. Be sure there is good ventilation when applying sealing compound. Failure to adhere to this warning may cause injury or death to personnel.

5. Apply sealing compound to diaphragm tank (Figure 6, Item 2) fitting.
6. Install elbow with bushing (Figure 6, Item 3) attached.
7. Install cold line hose (Figure 6, Item 4) onto bushing and elbow (Figure 6, Item 3).
8. Remove the air valve cap from the closed side of the diaphragm tank
9. Using compressor unit, pressurize the air side of the diaphragm tank to 20 psi in accordance with the instructions on the diaphragm tank.
10. Replace the air valve cap.
11. Startup shower facility, referring to WP 0005.

**END OF TASK****END OF WORK PACKAGE**

---

**FIELD MAINTENANCE****CHECK VALVE ASSEMBLY REPLACE, REPAIR**

---

**INITIAL SETUP:****Tools and Special Tools**

Tool Set, General Mechanics (WP 0051, Table 2, Item 3)

**Materials/Parts**

Gloves, Men's (WP 0054, Table 1, Item 4)  
Sealing Compound (Item 9, WP 0054)

**Personnel Required**

Quartermaster and Chemical Equipment Repairer, (91J) - 1

**Equipment Condition**

Shower is powered off (, WP 0005)  
Water drained from shower

---

Repair is limited to replacement of defective, missing, or damaged components. Disassemble only to the extent necessary to repair the item.

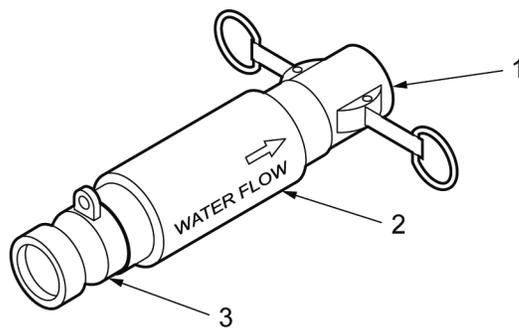

**CHECK VALVE ASSEMBLY REPLACEMENT****Removal**

Figure 1. Check Valve Assembly.

1. Remove suction strainer assembly ().
2. Release coupling (Figure 1, Item 1) and remove check valve assembly.

**Installation**

1. Install spring check valve assembly (Figure 1, Item 2) and secure coupling (Figure 1, Item 1).
2. Install suction strainer assembly ().
3. Start up the shower facility (WP 0005).

**END OF TASK**

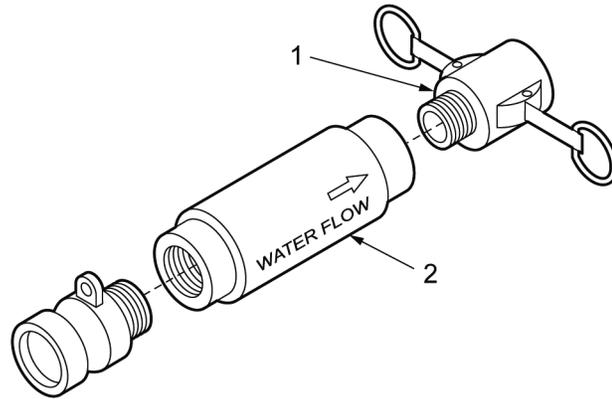

**CHECK VALVE ASSEMBLY REPLACE, REPAIR - (CONTINUED)****CHECK VALVE ASSEMBLY REPAIR****Disassemble**

Figure 2. Check Valve Assembly.

1. Remove coupling (Figure 1, Item 3) from check valve (Figure 1, Item 2).
2. Remove coupling (Figure 1, Item 1) from check valve (Figure 1, Item 2).

**Assemble**

1. Be sure any defective, missing, or damaged components have been replaced.

**WARNING**

Sealing compounds are potentially dangerous to personnel. Be sure there is good ventilation when applying sealing compound. Failure to adhere to this warning may cause injury or death to personnel.

**CAUTION**

Ensure that the female coupling is facing the direction of the supply pump.

2. Apply sealing compound to threaded ends of couplings (Figure 1, Item 1) and (Figure 1, Item 3) install coupling onto check valve (Figure 1, Item 2). Note that flow direction should be away from suction strainer when installing coupling.

**END OF TASK****END OF WORK PACKAGE**

Repair is limited to replacement of defective, missing, or damaged components. Disassemble only to the extent necessary to repair the item. If the item is being replaced, do not disassemble it.

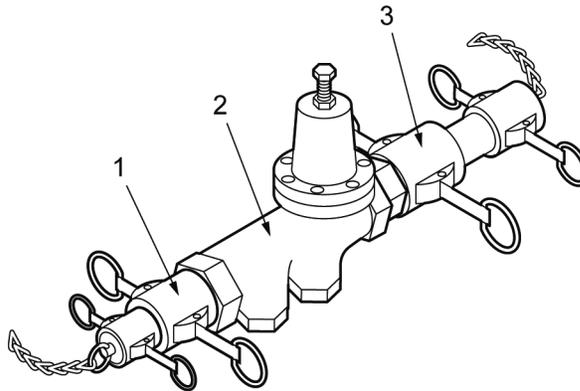

**REGULATOR VALVE ASSEMBLY REPLACEMENT****Removal**

Figure 1. Regulator Valve Assembly.

1. Release couplings (Figure 1, Item 1) and (Figure 1, Item 3) and remove regulator valve assembly (Figure 1, Item 2).

**Installation**

1. Install regulator valve assembly (Figure 1, Item 2) and secure couplings (Figure 1, Item 1) and (Figure 1, Item 3).
2. Start up the shower facility (WP 0005).

**END OF TASK**

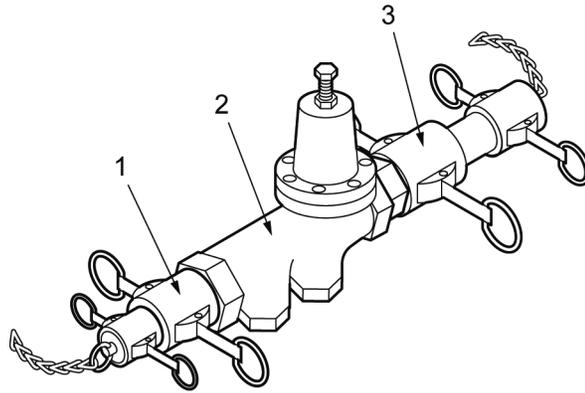

**REGULATOR VALVE ASSEMBLY REPLACE, REPAIR - (CONTINUED)****REGULATOR VALVE ASSEMBLY REPAIR****Disassemble**

Figure 2. Regulator Valve Assembly.

1. If necessary, release reducer coupling (Figure 1, Item 3) and cap coupling (Figure 1, Item 11).
2. Remove plug (Figure 1, Item 1), gasket (Figure 1, Item 2), cap and gasket (Figure 1, Item 10).
3. Release reducer coupling (Figure 1, Item 9) then remove reducer (Figure 1, Item 9) and gasket (Figure 1, Item 8).
4. Release coupling (Figure 1, Item 5) then remove reducer (Figure 1, Item 3) and gasket (Figure 1, Item 4).
5. Remove couplings (Figure 1, Item 5) and (Figure 1, Item 7) from regulator valve (Figure 1, Item 6).

**Assemble**

1. Be sure any defective, missing, or damaged components have been replaced.

**WARNING**

Sealing compounds are potentially dangerous to personnel. Be sure there is good ventilation when applying sealing compound. Failure to adhere to this warning may cause injury or death to personnel.

2. Apply sealing compound to threaded ends of couplings (Figure 1, Item 5) and (Figure 1, Item 7) then install couplings onto regulator valve (Figure 1, Item 6). Note flow direction when installing couplings.
3. Install gasket (Figure 1, Item 4) and reducer (Figure 1, Item 3) then secure coupling (Figure 1, Item 5).
4. Install gasket (Figure 1, Item 8) and reducer (Figure 1, Item 9) then secure reducer coupling.
5. Install gasket (Figure 1, Item 10) into cap (Figure 1, Item 11) and gasket (Figure 1, Item 2) into reducer (Figure 1, Item 3) then if necessary install plug (Figure 1, Item 1) and cap then secure cap and reducer couplings.
6. Ensure that regulator valve assembly is oriented correctly to ensure water flow.

Lock Washers (4) (Item 9, WP 0055)

Lock Washers (3) (Item 10, WP 0055)

**Personnel Required**

Quartermaster and Chemical Equipment Repairer, (91J) - 1

**Equipment Condition**

Shower is powered off.

Shower disconnected from power source.

---

**WARNING**

Never work on electrical equipment unless there is another person nearby who is familiar with the operation and hazards of the equipment and who is competent in administering first aid. When the technician is aided by operators, he must warn them about dangerous areas.

Be careful not to contact high-voltage connections of 115-volt ac input connections when installing or operating this equipment.

Whenever the nature of the operation permits, keep one hand away from the equipment to reduce the hazard of current flowing through vital organs of the body.

Do not disconnect power cables when power is on or generator set is operating.

Failure to follow this warning may result in serious injury or death to personnel.

**INSPECT**

1. Confirm that the power has been disconnected at the source, and then disconnect input power cable from switch box.
2. Remove 10 screws (Figure 1, Item 5). and carefully pull switch box cover (Figure 1, Item 28) out as far as wire leads will allow.
3. Inspect for damage, deterioration, or missing parts. Based on the inspection, determine if the switch box can be repaired or if it must be replaced.

SWITCH BOX ASSEMBLY REPLACE, REPAIR - (CONTINUED)

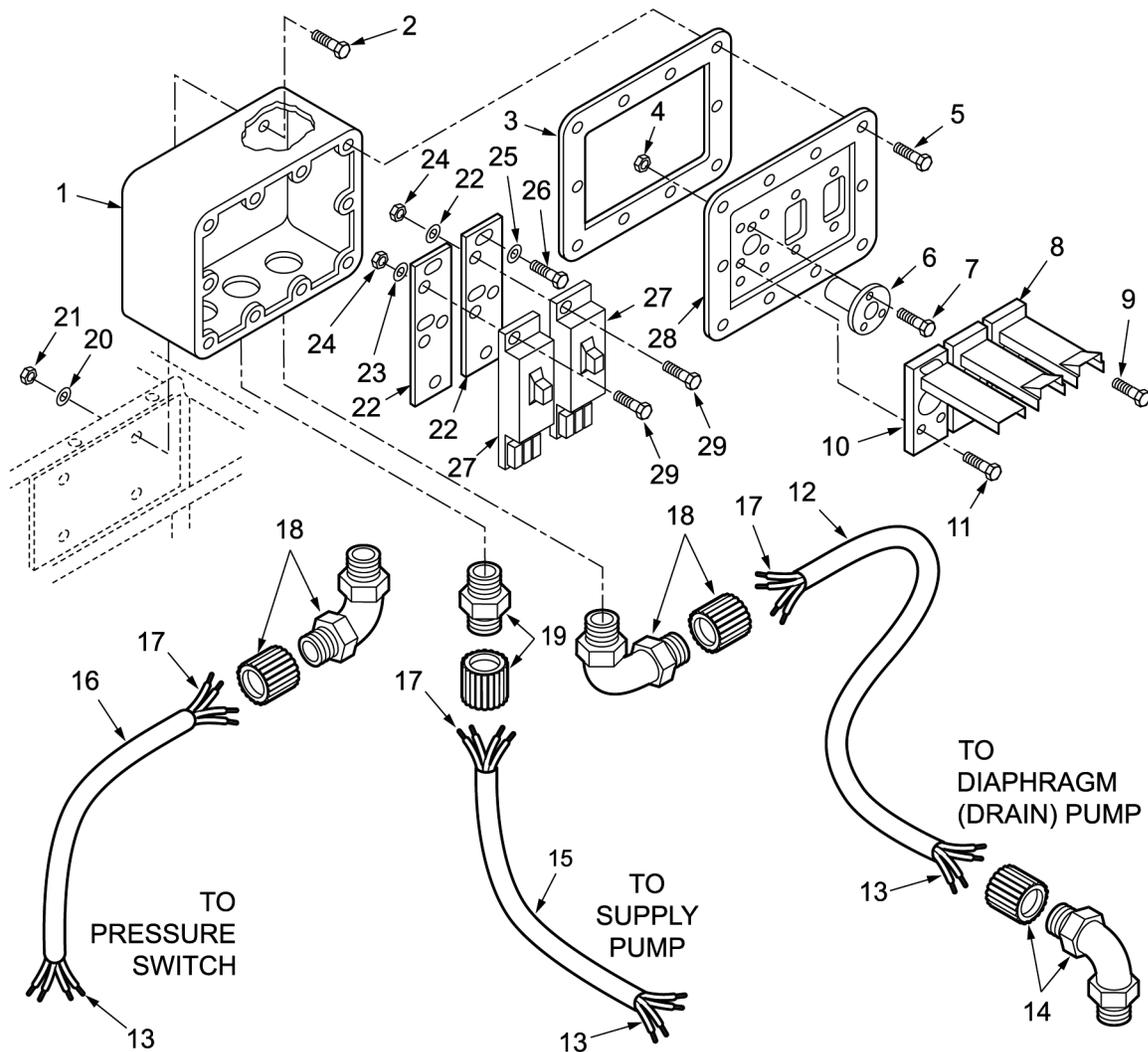

Figure 1. Repairing the Switch Box.

END OF TASK

TEST

1. Using multimeter set to measure continuity, check each switch (Figure 1, Item 27). Place both switches on the OFF position and check continuity between matching color leads on top and bottom of each switch. Replace switch if continuity was indicated.
2. Place both switches in the ON position and check continuity between matching color leads on top and bottom of each switch. Replace switch if no continuity was indicated.
3. Using multimeter set to measure continuity, check between ends of wire leads at terminal connections. Remove pressure switch and motor covers as necessary and use electrical schematic (Figure 2) for test points. Replace any wire leads that do not indicate continuity.

## SWITCH BOX ASSEMBLY REPLACE, REPAIR - (CONTINUED)

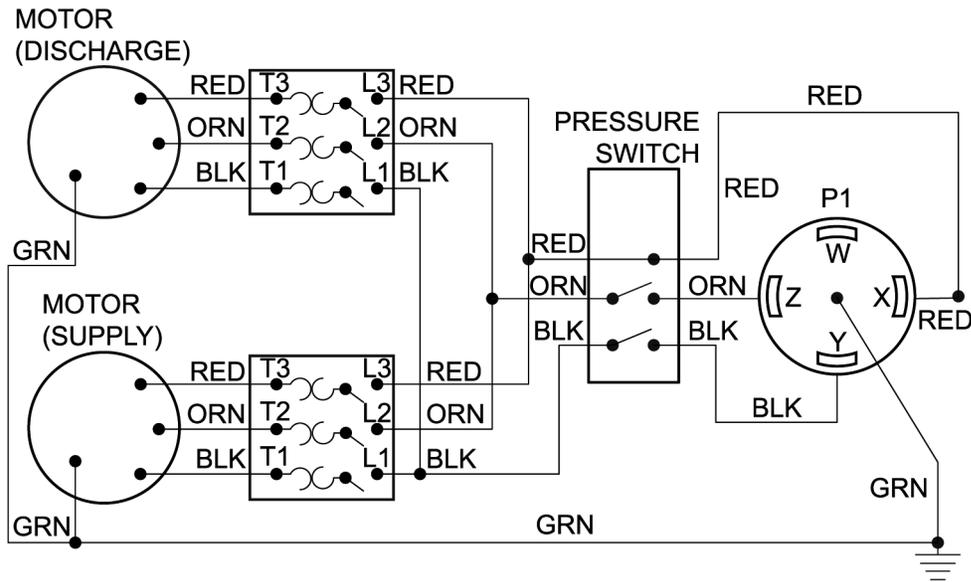

Figure 2. Electrical Schematic.

**END OF TASK****REPLACE****Removal**

1. Verify that power is off.

**NOTE**

To facilitate removal, be aware that on some models, the middle left screw may be partially covered by the power cover.

2. Remove 10 screws (Figure 3, Item 4) and carefully pull switch box cover (Figure 3, Item 3) out as far as wire leads will allow.
3. One at a time, tag and disconnect the wire leads (Figure 3, Item 6) attached to pressure switch, supply pump, and reciprocating pump. Remove covers as necessary to access lead terminals.
4. Remove conduit (Figure 3, Item 9) from pressure switch conduit connector.
5. Remove conduit (Figure 3, Item 8) from supply pump conduit connector.
6. Remove conduit connector (Figure 3, Item 7) from reciprocating pump.
7. Remove four nuts (Figure 3, Item 11), lock washers (Figure 3, Item 10), bolts (Figure 3, Item 2), and switch box (Figure 3, Item 1). Discard lock washers.

## SWITCH BOX ASSEMBLY REPLACE, REPAIR - (CONTINUED)

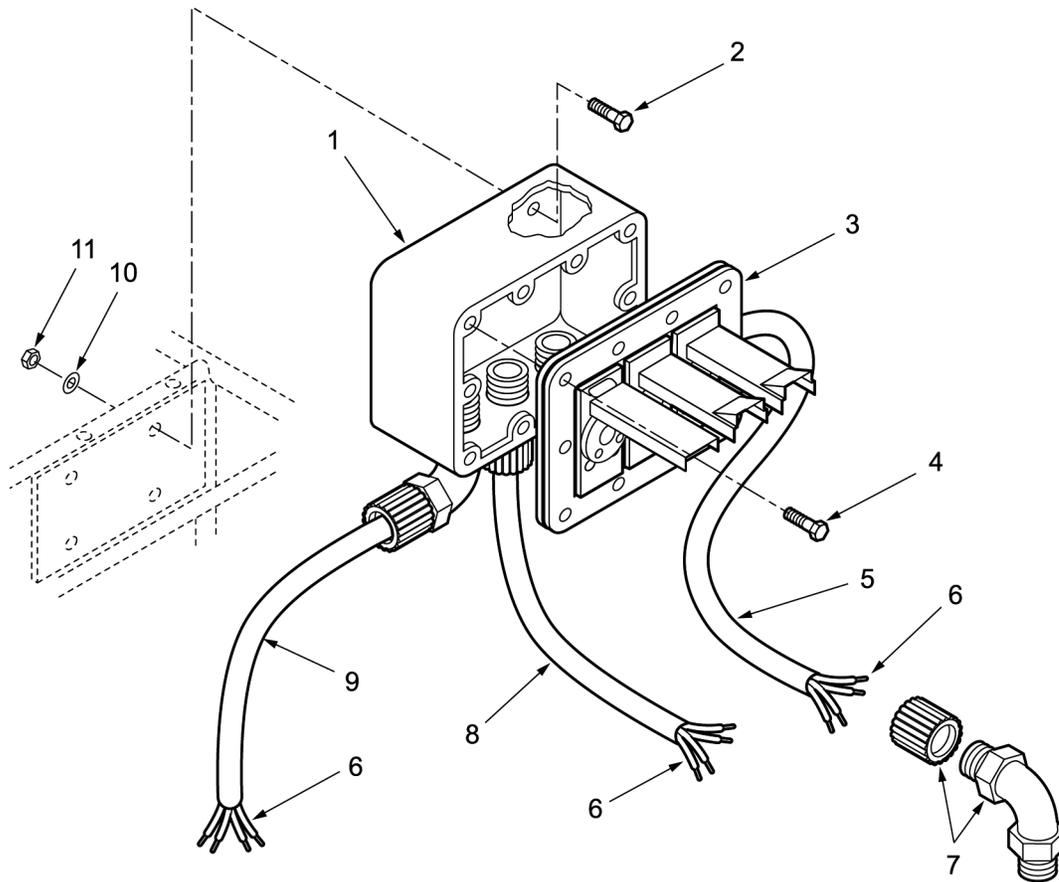

Figure 3. Replacing the Switch Box.

**Installation**

1. Be sure any defective, missing, or damaged components have been replaced.
2. If switch box cover (Figure 3, Item 3) is not already loose, remove 9 screws (Figure 3, Item 4)
3. Carefully pull switch box cover out as far as wire leads will allow.

**WARNING**

Sealing compounds are potentially dangerous to personnel. Be sure there is good ventilation when applying sealing compound. Failure to adhere to this warning may cause injury or death to personnel.

4. Apply sealing compound to the threads of four bolts (Figure 3, Item 2).
5. Install switch box (Figure 3, Item 1) and secure using the four bolts, new lock washers (Figure 3, Item 10), and nuts (Figure 3, Item 11).
6. Install conduit (Figure 3, Item 9) into pressure switch conduit connector.
7. Install conduit (Figure 3, Item 8) into supply pump conduit connector.

**SWITCH BOX ASSEMBLY REPLACE, REPAIR - (CONTINUED)**

8. Install conduit connector (Figure 3, Item 7) onto reciprocating pump.
9. Connect wire leads (Figure 3, Item 6) that go to pressure switch, supply pump, and reciprocating pump in accordance with the wire tagging done during removal. If necessary, refer to the electrical schematic in (Figure 3).
10. Remove tags and install covers as necessary.
11. Position switch box cover (Figure 3, Item 3) in place and secure using the 9 screws.
12. Start up the shower facility, referring to WP 0005.

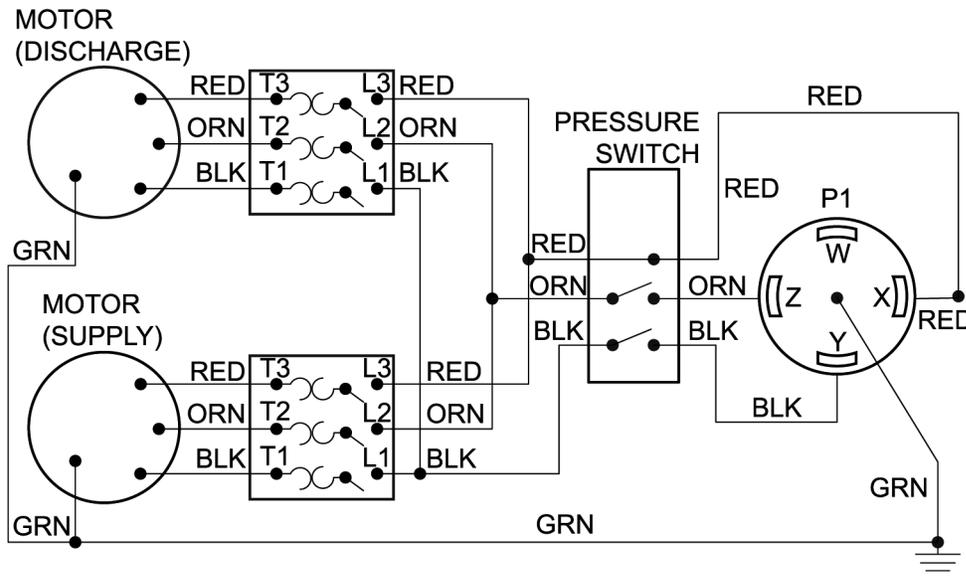

Figure 4. Electrical Schematic.

**END OF TASK****REPAIR****DISASSEMBLE****NOTE**

Repair is limited to replacement of defective, missing, or damaged components. Disassemble only to the extent necessary to repair the item. If the item is being replaced, do not disassemble it.

1. If switch box cover (Figure 1, Item 28) is not already loose, remove 10 screws (Figure 1, Item 5) and carefully pull switch box cover out as far as wire leads will allow.
2. Tag and disconnect wire leads (Figure 1, Item 17) from each other as well as switches (Figure 1, Item 27) and receptacle (Figure 1, Item 6).
3. Remove conduit connector (Figure 1 Item 14) from Conduit (Figure 1 Item 12).
4. Remove conduits (Figure 1, Items 12, 15, and 16) with wire leads inside then remove wire leads from conduit.
5. Remove three conduit connectors (Figure 1, Items 18 and 19).
6. Remove four screws (Figure 1, Item 11) and cover (Figure 1, Item 10).

**SWITCH BOX ASSEMBLY REPLACE, REPAIR - (CONTINUED)**

7. Remove four screws (Figure 1 Item 9) and two covers (Figure 1, Item 8).
8. Remove three nuts (Figure 1, Item 4), screws (Figure 1, Item 7), and Receptacle (Figure 1, Item 6).
9. If gasket (Figure 1, Item 3) needs to be replaced, remove it by carefully pulling and scraping it off switch box cover (Figure 1, Item 28).
10. Remove six screws (Figure 1, Item 26), lock washers (Figure 1, Item 25), plates (Figure 1, Item 22), and two switches (Figure 1, Item 27) from switch box (Figure 1, Item 1). Discard lock washers.
11. Remove six nuts (Figure 1, Item 24), lock washers (Figure 1, Item 23), screws (Figure 1, Item 29), and two switches (Figure 1, Item 27) from plates (Figure 1, Item 22). Discard lock washers.

**ASSEMBLE**

1. Be sure any defective, missing, or damaged components have been replaced.

**WARNING**

Sealing compounds are potentially dangerous to personnel. Be sure there is good ventilation when applying sealing compound. Failure to adhere to this warning may cause injury or death to personnel.

2. Apply sealing compound to the threads of six screws (Figure 1, Item 29) and then assemble two switches (Figure 1, Item 27) onto plates (Figure 1, Item 22) using the six screws, new lock washers (Figure 1, Item 23) and nuts (Figure 1, Item 24) to secure them.
3. Apply sealing compound to the threads of six screws (Figure 1, Item 26) then install two plates (Figure 1, Item 22), with Switches (Figure 1, Item 27) attached, using the six screws and new lock washers (Figure 1, Item 25) to secure them.
4. If gasket (Figure 1, Item 3) was removed, apply adhesive to mating surfaces of new gasket and switch box cover (Figure 1, Item 28). Allow adhesive to dry until it is tacky but will not stick to fingers then assemble by pressing firmly together. Make sure gasket is secure completely around the cover.
5. Apply sealing compound to the threads of three screws (Figure 1, Item 7) then install Receptacle (Figure 1, Item 6) and secure using the three screws and nuts (Figure 1, Item 4).
6. Apply sealing compound to the threads of four screws (Figure 1, Item 9) then install two covers (Figure 1, Item 8) and secure using the four screws.
7. Apply sealing compound to the threads of four screws (Figure 1, Item 11) then install cover (Figure 1, Item 10) and secure using four screws.
8. Install three conduit connectors (Figure 1, Items 18 and 19) as illustrated.
9. Install wire leads into conduit (Figure 1, Items 12, 15, and 16) using tags and electrical schematic (Figure 2).
10. Remove tags.
11. Install conduit (Figure 1, Items 12, 15, and 16) into conduit connectors (Figure 1, Items 18 and 19) as illustrated using electrical schematic (Figure 2).
12. Install conduit connector (Figure 1, Item 14) onto conduit (Figure 1, Item 12).
13. Connect the corresponding wire leads (Figure 1, Item 17) to each other as well as to the switches (Figure 1, Item 27) and the receptacle (Figure 1, Item 6) using tags and electrical schematic (Figure 2).
14. Remove tags.

**END OF TASK****END OF WORK PACKAGE**

## FIELD MAINTENANCE

## TEMPERATURE REGULATOR ASSEMBLY REPLACE, REPAIR

## INITIAL SETUP:

**Tools and Special Tools**

Tool Set, General Mechanics (WP 0051, Table 2, Item 3)

**Materials/Parts**

Gloves, Men's (WP 0054, Table 1, Item 4)  
Sealing Compound (Item 9, WP 0054)

**Personnel Required**

Quartermaster and Chemical Equipment Repairer, (91J) - 1

**Equipment Condition**

Shower is powered off (, WP 0005)  
Water drained from shower

Repair of the temperature regulator assembly (Figure 2, Item 3) is limited to replacing the temperature regulator gauge.

## REPLACE

## Removal

## NOTE

Remove only if necessary for repair.

1. Release coupling (Figure 1, Item 3) and disconnect the hot water supply hose coupling coming from the water heater.

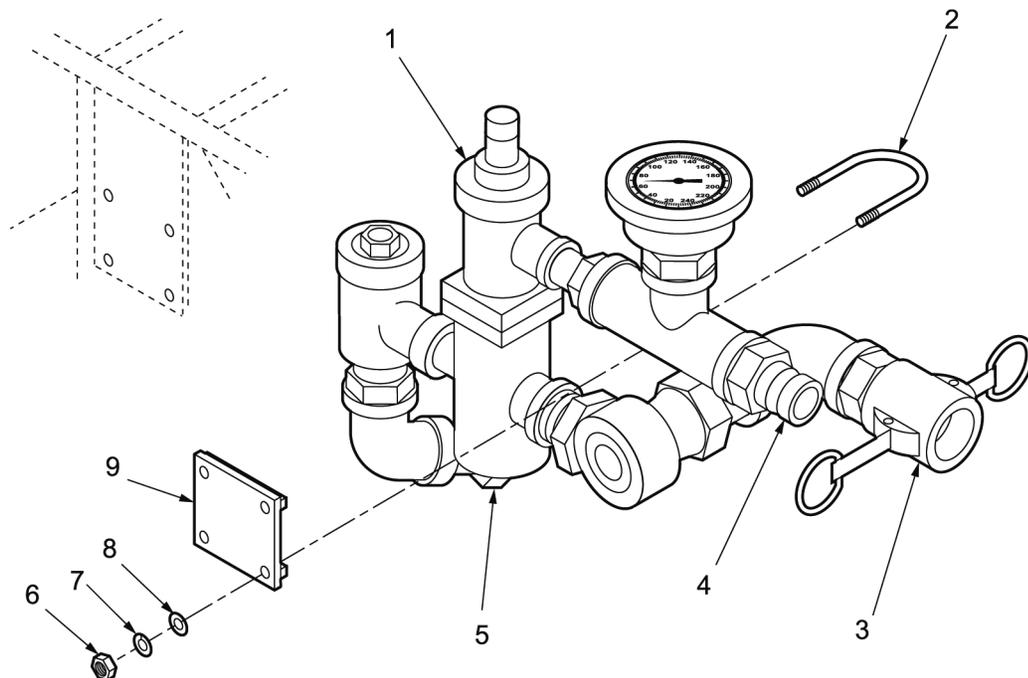

Figure 1. Replacing the Temperature Regulator.

2. Release the coupling (Figure 1, Item 4) and disconnect the shower water supply hose.
3. Remove cold line hose from pipe bushing (Figure 1, Item 5).
4. Remove four self-locking nuts (Figure 1, Item 6), lock washers (Figure 1, Item 7), flat washers (Figure 1, Item 8), two U-bolts (Figure 1, Item 2), bracket (Figure 1, Item 9), and temperature regulator (Figure 1, Item 1).

**TEMPERATURE REGULATOR ASSEMBLY REPLACE, REPAIR - (CONTINUED)**

5. Discard self-locking nuts and lock washers.
6. Replace unserviceable temperature regulator (Figure 1, Item 1).

**Installation**

1. Ensure unserviceable temperature regulator (Figure 1, Item 1) has been replaced.
2. Using two U-bolts (Figure 1, Item 2), four flat washers (Figure 1, Item 8), new lock washers (Figure 1, Item 7), and new self-locking nuts (Figure 1), install Bracket (Figure 1, Item 9) and temperature regulator (Figure 1, Item 1) assembly.
3. Install cold line onto pipe bushing (Figure 1, Item 5).
4. Connect shower water supply hose end coupling to coupling (Figure 1, Item 4) and secure coupling.
5. Connect hot water supply hose end coupling to coupling (Figure 1, Item 3) and secure coupling.
6. Start up the shower facility as per WP 0005.

**END OF TASK****REPAIR****Disassemble**

1. Secure bushing (Figure 2, Item 2) with a wrench so that it does not turn while removing the temperature gauge.
2. Remove the temperature gauge (Figure 2, Item 1).

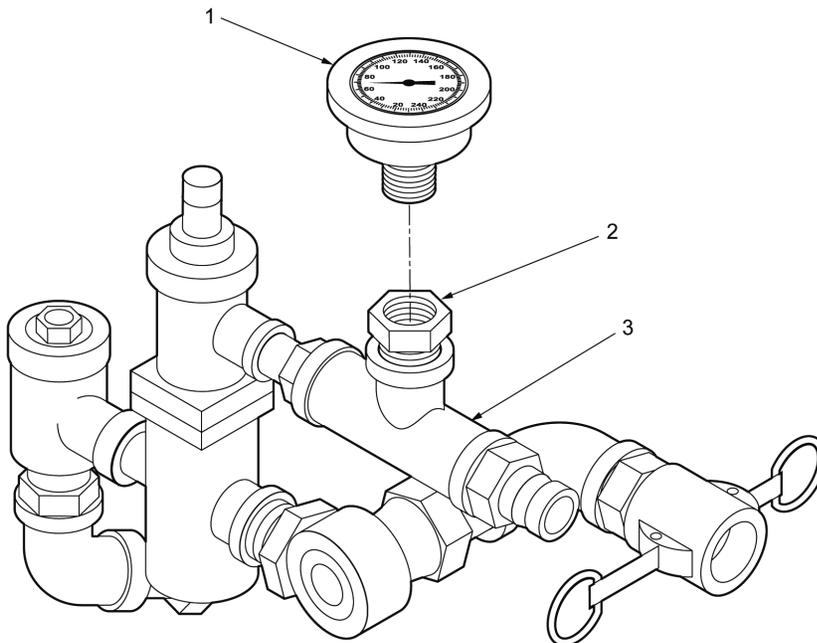

Figure 2. Repairing the Temperature Regulator.

---

**TEMPERATURE REGULATOR ASSEMBLY REPLACE, REPAIR - (CONTINUED)****Assemble****WARNING**

Sealing compounds are potentially dangerous to personnel. Be sure there is good ventilation when applying sealing compound. Failure to adhere to this warning may cause injury or death to personnel.

1. Apply sealing compound to the threaded end of temperature gauge (Figure 2, Item 1).
2. Thread the temperature gauge onto bushing (Figure 2 Item 2) and tighten.

**END OF TASK****END OF WORK PACKAGE**

## FIELD MAINTENANCE

## SUCTION STRAINER ASSEMBLY REPLACE, REPAIR

## INITIAL SETUP:

**Tools and Special Tools**

Tool Set, General Mechanics (WP 0051, Table 2, Item 3)

**Materials/Parts**

Gloves, Men's (WP 0054, Table 1, Item 4)  
Elastic Stop Nuts (3) (Item 14, WP 0055)  
Sealing Compound (Item 9, WP 0054)

**Personnel Required**

Quartermaster and Chemical Equipment Repairer, (91J) - 1

**Equipment Condition**

Shower is powered off (, WP 0005)  
Suction strainer removed from the water supply  
Check valve removed

## REPLACE

**Removal**

1. Remove the suction strainer from the water source.
2. Disconnect the check valve from the suction strainer coupling (Figure 1).
3. Remove the suction strainer coupling from the suction strainer (Figure 2).

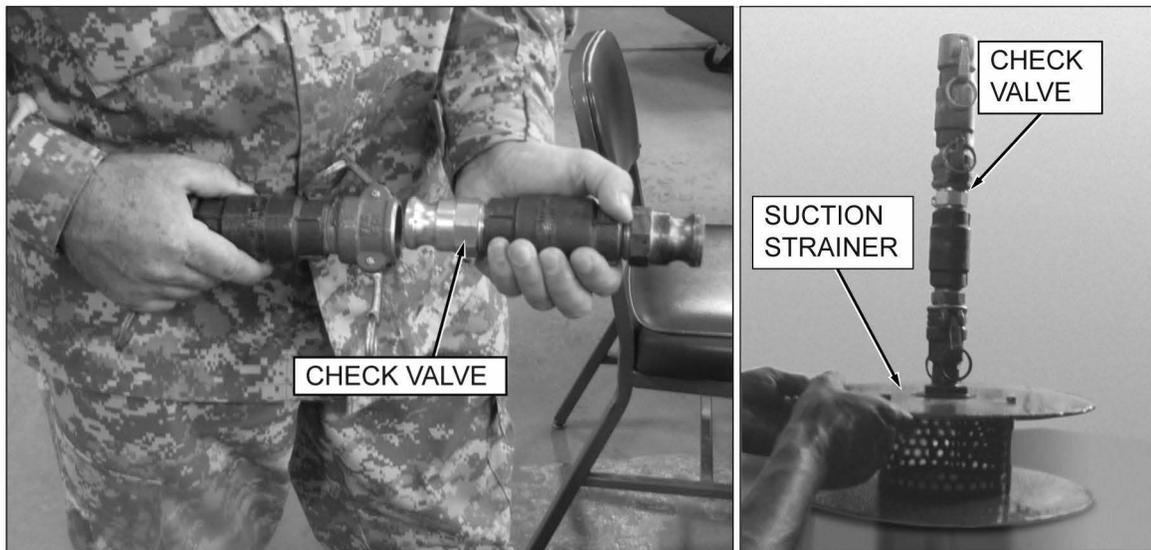

Figure 1. Suction Strainer, Check Valve, and Adapter.

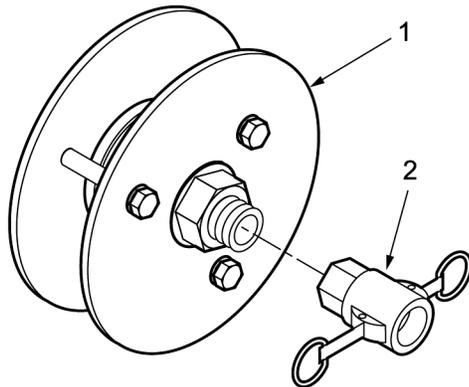

**SUCTION STRAINER ASSEMBLY REPLACE, REPAIR - (CONTINUED)**

Figure 2. Removing the Suction Strainer Coupling.

**Installation****WARNING**

Sealing compounds are potentially dangerous to personnel. Be sure there is good ventilation when applying sealing compound. Failure to adhere to this warning may cause injury or death to personnel.

1. Apply sealing compound to threaded end of suction strainer (Figure 2, Item 1).
2. Attach the suction strainer coupling (Figure 2, Item 2) to the suction strainer (Figure 2, Item 1).
3. Connect the check valve to the coupling (Figure 2, Item 2).
4. Connect the water supply hose to the other end of the check valve (Figure 2, Item 2).
5. Start up the shower facility, referring to WP 0005.

**END OF TASK****REPAIR****Disassemble**

1. Remove three elastic stop nuts (Figure 3, Item 1), flat washers (Figure 3, Item 2), bolts (Figure 3, Item 6), flat washers (Figure 3, Item 5), and fiberglass disk (Figure 3, Item 3).
2. Discard elastic stop nuts (Figure 3, Item 1).
3. Remove coupling (Figure 3, Item 7), nipple (Figure 3, Item 8), bushing (Figure 3, Item 9), strainer (Figure 3, Item 10), and fiberglass disk (Figure 3, Item 4).

---

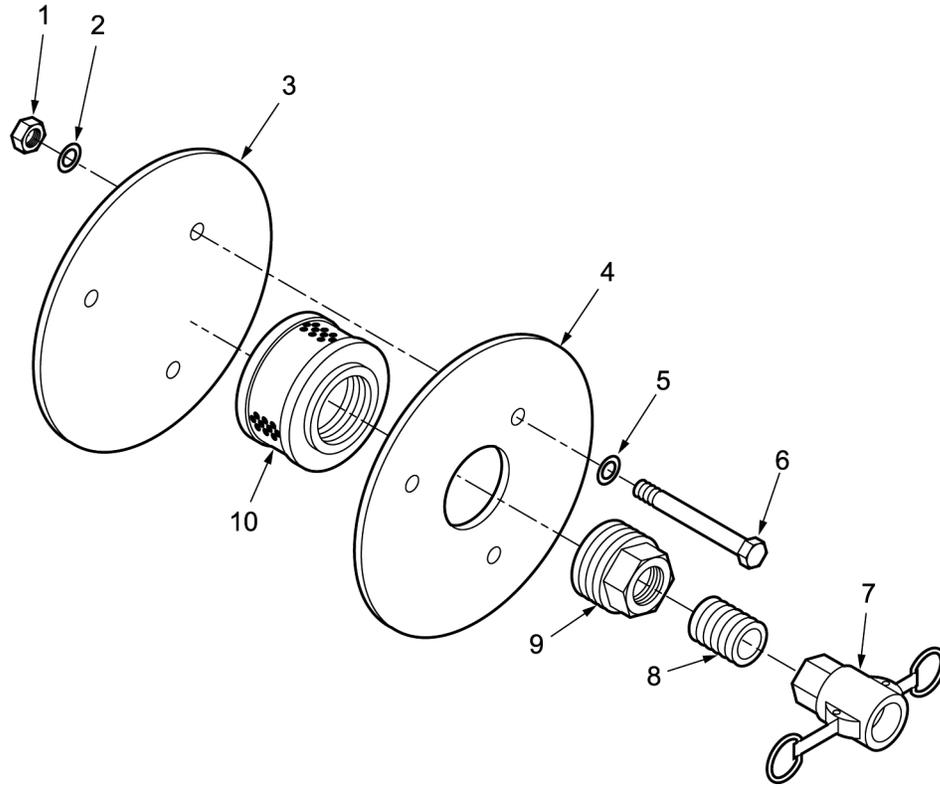

**SUCTION STRAINER ASSEMBLY REPLACE, REPAIR - (CONTINUED)**

Figure 3. Repairing the Suction Strainer.

**Assemble**

1. Be sure any defective, missing, or damaged components have been replaced.

**WARNING**

Sealing compounds are potentially dangerous to personnel. Be sure there is good ventilation when applying sealing compound. Failure to adhere to this warning may cause injury or death to personnel.

2. Apply sealing compound onto threaded end of bushing (Figure 3, Item 9) and threaded ends of nipple (Figure 3, Item 8).
3. Assemble fiberglass disk (Figure 3, Item 4), Strainer (Figure 3, Item 10), bushing, nipple, and coupling (Figure 3, Item 7).

**SUCTION STRAINER ASSEMBLY REPLACE, REPAIR - (CONTINUED)**

4. Assemble fiberglass disk (Figure 3, Item 3), Strainer (Figure 3, Item 10), and fiberglass disk (Figure 3, Item 4) using three flat washers (Figure 3, Item 5), bolts (Figure 3, Item 6), flat washers (Figure 3, Item 2), and new elastic stop nuts (Figure 3, Item 1).

**END OF TASK****END OF WORK PACKAGE**

---

**FIELD MAINTENANCE****RECIPROCATING PUMP ASSEMBLY REPLACE, REPAIR**

---

**INITIAL SETUP:****Tools and Special Tools**

Tool Set, General Mechanics (WP 0051, Table 2, Item 3)

**Materials/Parts**

Lock Washers (4) (Item 15, WP 0055)  
Self Locking Nuts (4) (Item 3, WP 0055)

**Personnel Required**

Quartermaster and Chemical Equipment Repairer,  
(91J) - 1

**References****Equipment Condition**

Shower is powered off  
Shower disconnected from power source.  
Water drained from shower

---

Repair of the reciprocating pump is limited to replacing the diaphragm valve.

**REPLACE****Removal**

1. Release quick-disconnect coupling (Figure 1) and disconnect the drain hose from the reciprocating pump inlet (Figure 1).
2. Release quick-disconnect coupling (Figure 1) and disconnect the drain hose from the reciprocating pump outlet (Figure 1).

**WARNING**

Never work on electrical equipment unless there is another person nearby who is familiar with the operation and hazards of the equipment and who is competent in administering first aid. When the technician is aided by operators, he must warn them about dangerous areas.

Be careful not to contact high-voltage connections of 115-volt ac input connections when installing or operating this equipment.

Whenever the nature of the operation permits, keep one hand away from the equipment to reduce the hazard of current flowing through vital organs of the body.

Do not disconnect power cables when power is on or generator set is operating.

Failure to follow this warning may result in serious injury or death to personnel.

3. Remove 4 screws (Figure 2, Item 4), cover (Figure 2, Item 7, and gasket (Figure 2, Item 3).

RECIPROCATING PUMP ASSEMBLY REPLACE, REPAIR - (CONTINUED)

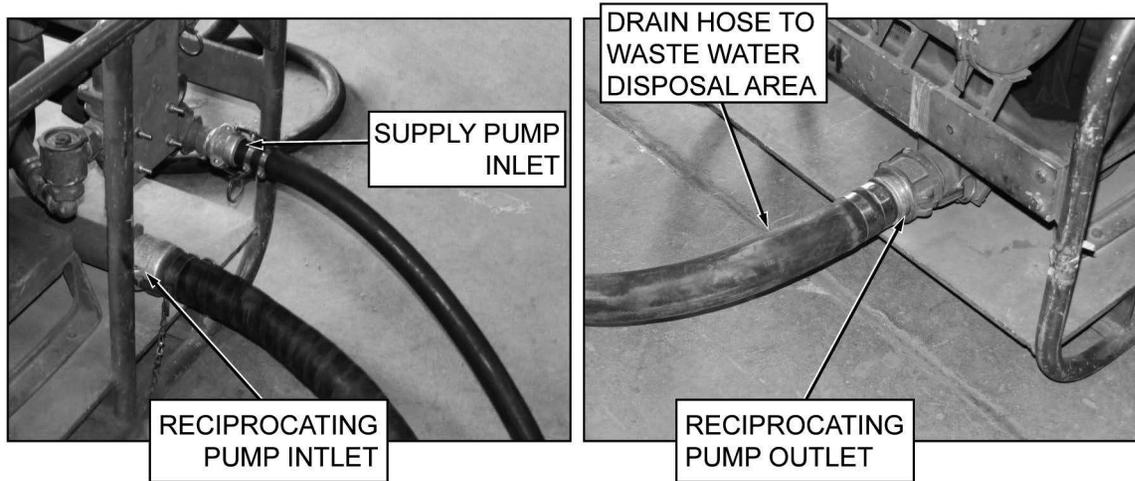

Figure 1. Disconnecting Inlet and Outlet Drain Hoses.

4. Remove conduit connector (Figure 2, Item 9).
5. Identify and note locations of wire leads prior to disconnecting them.
6. Disconnect wire leads from reciprocating pump conduit.
7. Carefully pull the conduit end and wire leads from the reciprocating pump electrical connection box.
8. Remove four bolts, nuts, and washers (Figure 2, Item 5), and then remove the pump assembly cross member (Figure 2, Item 6).
9. Remove two diaphragm band clamps (Figure 2, Item 2) from the diaphragm tank (Figure 2, Item 1).

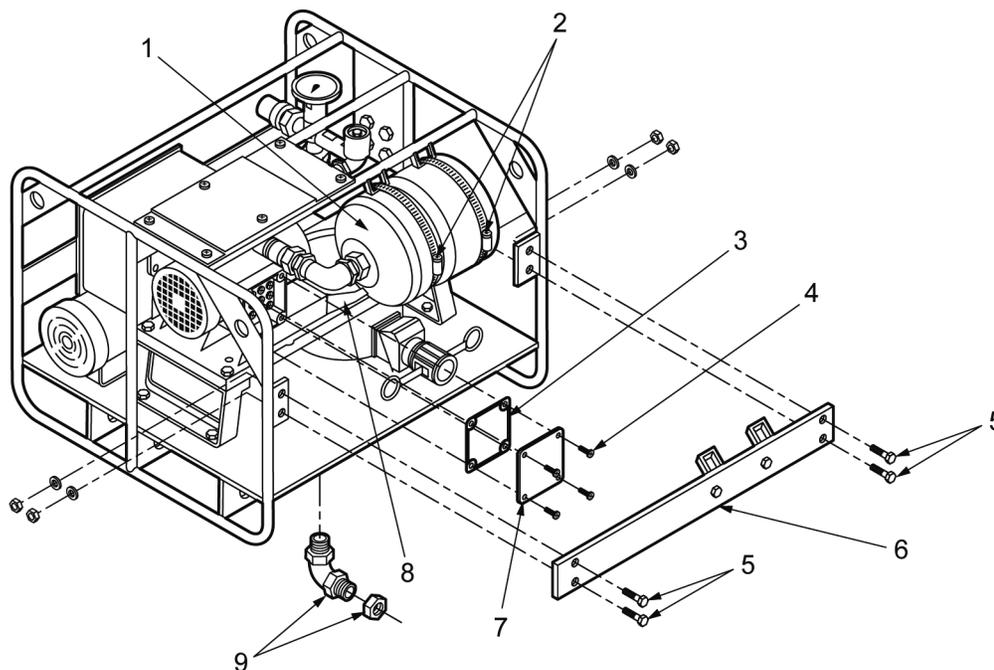

Figure 2. Disconnecting Conduit and Pump Assembly Cross Member.

10. Remove four self-locking nuts (Figure 3, Item 2), eight flat washers (Figure 3, Item 4), and four bolts (Figure 3, Item 2).

**RECIPROCATING PUMP ASSEMBLY REPLACE, REPAIR - (CONTINUED)**

11. Discard the self-locking nuts.
12. Carefully lift up on the diaphragm tank (Figure 3, Item 1) only enough to provide clearance for when the reciprocating pump is removed from the side of the pump assembly.
13. Slide the reciprocating pump out of the pump assembly from underneath the diaphragm tank, as shown in (Figure 3).

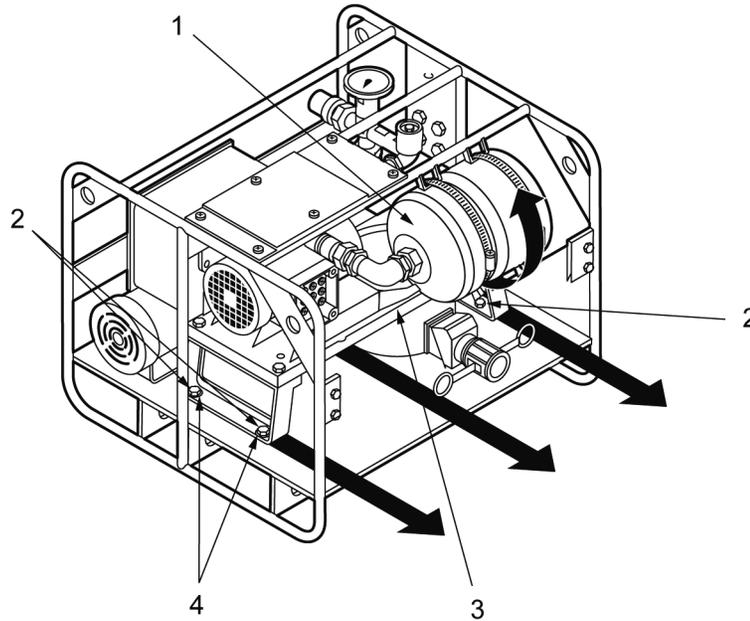

Figure 3. Removing and Installing the Reciprocating Pump.

14. Replace any defective, missing, or damaged components.
15. Repair or replace removed reciprocating pump (Figure 4, Item 3) as required. Ensure that reciprocating pump is properly lubricated (WP 0010) as necessary.

## RECIPROCATING PUMP ASSEMBLY REPLACE, REPAIR - (CONTINUED)

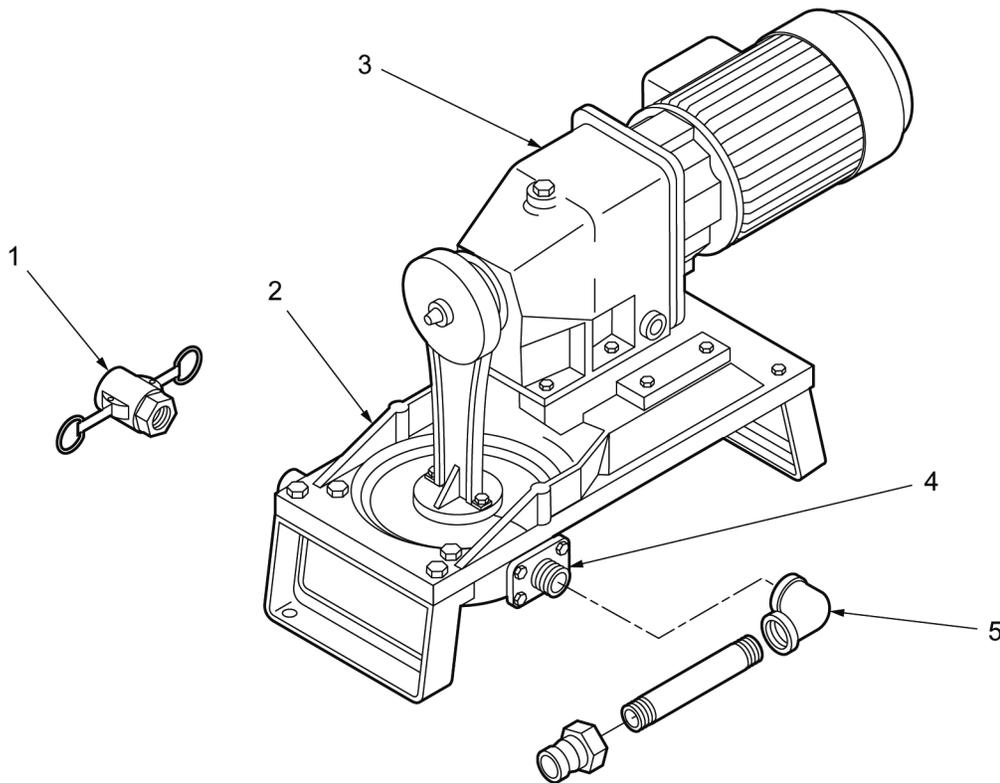

Figure 4. Removing and Installing the Reciprocating Pump.

### Installation

1. Be sure any defective, missing, or damaged components have been replaced.
2. Carefully lift up on the diaphragm tank (Figure 3) only enough to provide clearance for when the reciprocating pump is installed onto the pump assembly.
3. Install reciprocating pump (Figure 3, Item 8) into the pump assembly and align the mounting holes.
4. Secure the pump using four bolts (Figure 3, Item 2), flat washers (Figure 3, Item 4), and new self-locking nuts (Figure 3, Item 2).

### WARNING

Never work on electrical equipment unless there is another person nearby who is familiar with the operation and hazards of the equipment and who is competent in administering first aid. When the technician is aided by operators, he must warn them about dangerous areas.

Be careful not to contact high-voltage connections of 115-volt ac input connections when installing or operating this equipment.

Whenever the nature of the operation permits, keep one hand away from the equipment to reduce the hazard of current flowing through vital organs of the body.

Do not disconnect power cables when power is on or generator set is operating.

**RECIPROCATING PUMP ASSEMBLY REPLACE, REPAIR - (CONTINUED)**

Failure to follow this warning may result in serious injury or death to personnel.

5. Pass wires from conduit through elbow into the switchbox. Thread conduit nut onto elbow and tighten.
6. Connect the wire leads to the reciprocating pump in accordance with the tagging done during removal. If necessary, refer to electrical schematic in Figure 5.

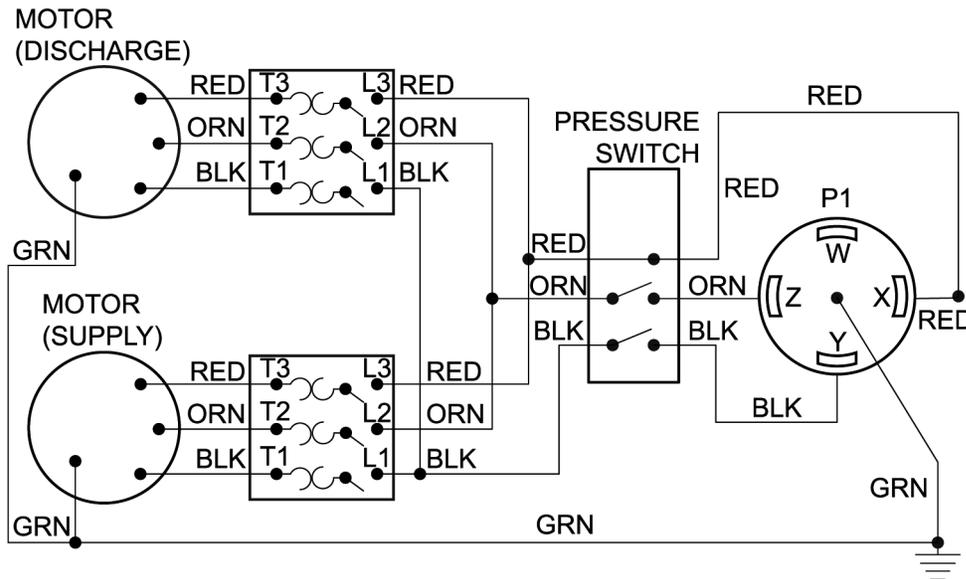

Figure 5. Removing and Installing the Reciprocating Pump.

7. Install gasket (Figure 2, Item 3), cover (Figure 2, Item 7), and four screws (Figure 2, Item 4).
8. Install the pump assembly cross member (Figure 2, Item 6) using 4 bolts, nuts, and washers (Figure 2, Item 5).
9. Install and secure the two diaphragm band clamps (Figure 2, Item 2). (Figure 2, Item 1).
10. Connect the drain hose coming from the WYE quick disconnect to the inlet coupling (Figure 1, Item 7) of the reciprocating pump and secure the coupling.
11. Connect the drain hose that is leading to the waste water collection site to the reciprocating pump outlet coupling (Figure 1, Item 12) and secure the coupling.
12. Start up shower facility, referring to WP 0005.

**END OF TASK****REPAIR****Disassemble**

1. Remove the reciprocating pump from the pump frame, referring to the removal procedures in .

**NOTE**

Place the reciprocating pump on its side for easier access to the nuts securing the pump base (Figure 6 Item 4) and diaphragm (Figure 6 Item 3).

2. Remove four nuts (Figure 6, Item 6), lock washers (Figure 6, Item 5), screws (Figure 6, Item 2).
3. Remove pump base (Figure 6, Item 4). Remove diaphragm valve (Figure 6, Item 3) from housing.

**RECIPROCATING PUMP ASSEMBLY REPLACE, REPAIR - (CONTINUED)**

4. Carefully remove metal support plate from diaphragm valve (Figure 6, Item 3).
5. Discard the lock washers.

**Assemble**

1. Place the metal support plate onto the diaphragm valve (Figure 6, Item 3), then place assembly onto the pump frame (Figure 6, Item 4).
2. Mount the pump base (Figure 6, Item 4) onto the pump frame over the diaphragm valve.
3. Align the mounting holes and secure using four screws (Figure 6, Item 2), new lock washers (Figure 6, Item 5), and nuts (Figure 6, Item 6). Be sure diaphragm valve is not pinched.

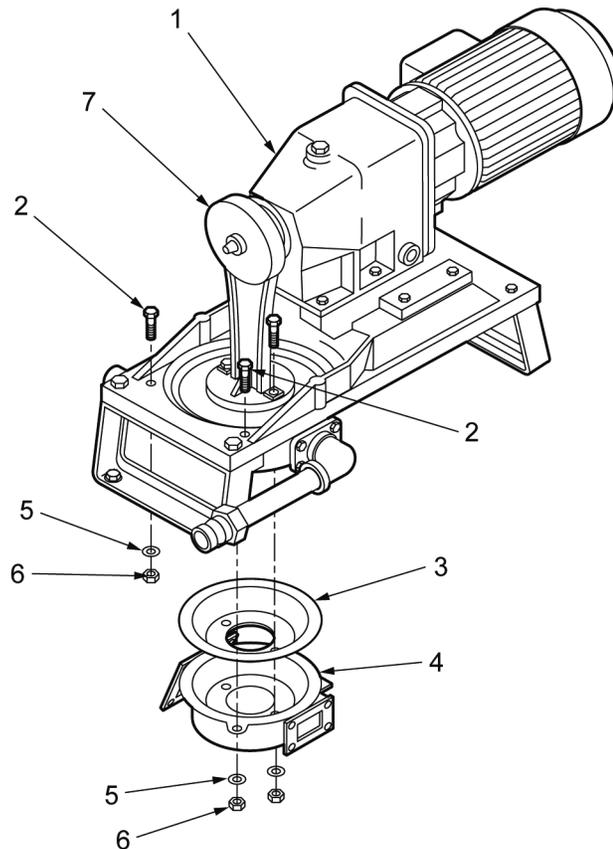

Figure 6. Repairing the Reciprocating Pump.

**REPLACE****WARNING**

Never work on electrical equipment unless there is another person nearby who is familiar with the operation and hazards of the equipment and who is competent in administering first aid. When the technician is aided by operators, he must warn them about dangerous areas.

Be careful not to contact high-voltage connections of 115-volt ac input connections when installing or operating this equipment.

Whenever the nature of the operation permits, keep one hand away from the equipment to reduce the hazard of current flowing through vital organs of the body.

Do not disconnect power cables when power is on or generator set is operating.

Failure to follow this warning may result in serious injury or death to personnel.

If only the diaphragm tank must be removed and not the entire pump frame, go to the procedure for removing the diaphragm tank in this work package. To replace the entire pump frame assembly, do the following:

1. Remove the switch box (Figure 1), referring to .
2. Remove the supply pump (Figure 1), referring to WP 0023.
3. Remove the temperature regulator (Figure 1), referring to .
4. Remove the reciprocating pump (Figure 1) , referring to .
5. Install the switch box, supply pump, temperature regulator, and reciprocating pump into the new pump frame assembly, referring to the work packages referenced in steps 1 through 4 above.

**PUMP FRAME ASSEMBLY REPLACE - (CONTINUED)**

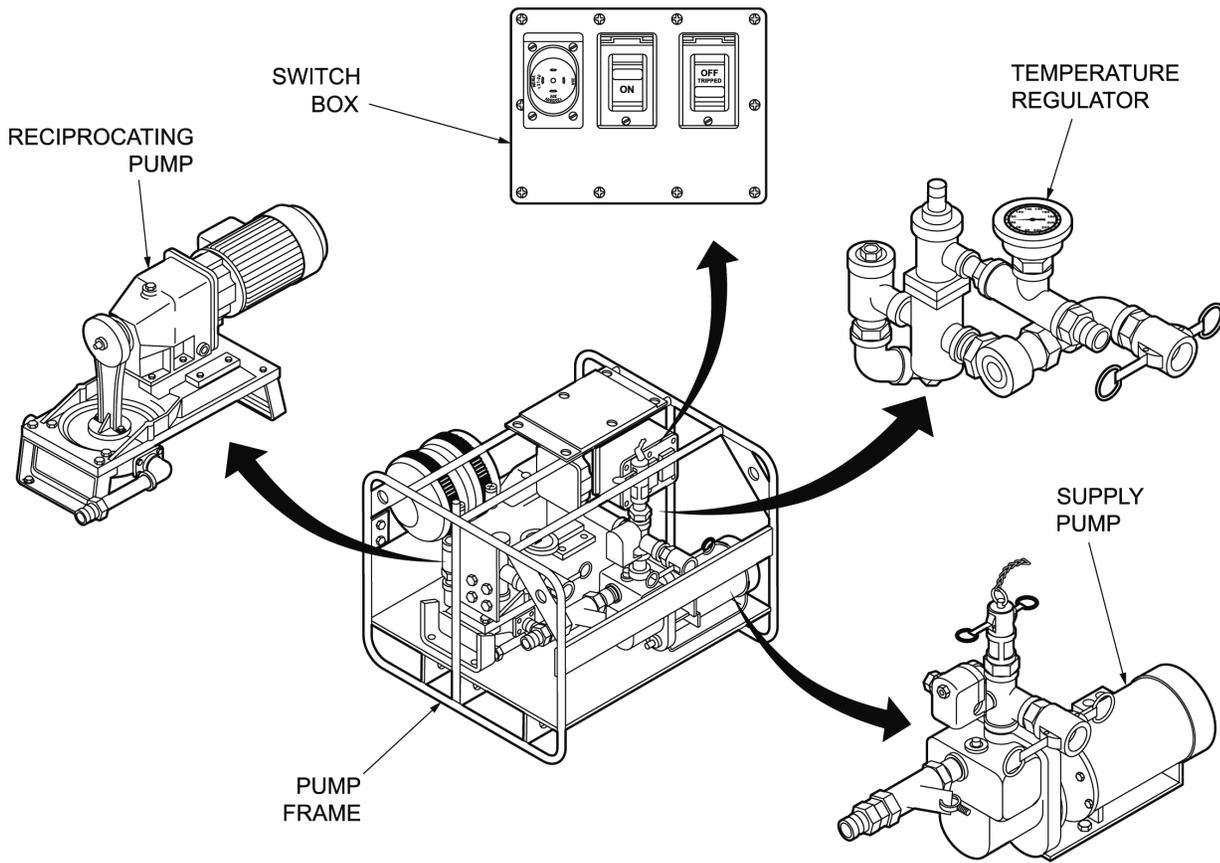

Figure 1. Replacing the Pump Frame Assembly.

**END OF TASK**

**END OF WORK PACKAGE**

## FIELD MAINTENANCE

## STORAGE CONTAINER REPLACEMENT

## INITIAL SETUP:

**Tools and Special Tools**

Tool Kit, Carpenter's (WP 0051, Table 2, Item 1)  
 Tool Kit, Supplement (WP 0051, Table 2, Item 2)

Lumber (WP 0042, Item 5)  
 Plywood (WP 0043, Item 4)

**Personnel Required**

Carpentry and Masonry Specialist, 12W - 2

**Materials/Parts**

Gloves, Men's (WP 0054, Table 1, Item 4)  
 Lumber (WP 0042, Item 4)

**Equipment Condition**

Storage container empty.

## NOTE

Replacement of the storage container consists of fabricating a new container using salvaged or new hardware and bulk lumber and plywood.

Salvaging usable hardware items from the old storage container is the only disassembly applicable to replacing the container.

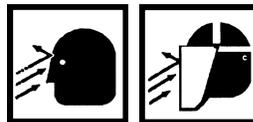

## STORAGE CONTAINER REPLACEMENT

**Storage container hardware removal**

1. Remove any usable hardware items from the old storage container.
2. Replace any unusable or missing hardware items to make a complete set for assembly.

**Fabricating a new storage container**

## WARNING

Metal debris from drilling out rivets poses an eye hazard. Wear eye protection when removing and replacing rivets.

Flying debris from using wood fasteners can be an eye hazard. Wear eye protection when removing and replacing rivets.

Failure to comply with this warning can result in injury to personnel and damage to equipment.

## WARNING

Hearing protection must be worn when using power equipment.

**STORAGE CONTAINER REPLACEMENT - (CONTINUED)**

1. To fabricate the lid of the storage container:
  - a. Place two pieces of lumber (Figure 1, Item 23) and four equally spaced pieces of lumber (Figure 1, Item 22) onto one sheet of plywood (Figure 1, Item 1) as illustrated.
  - b. Secure the lumber to plywood using wood screws as available.

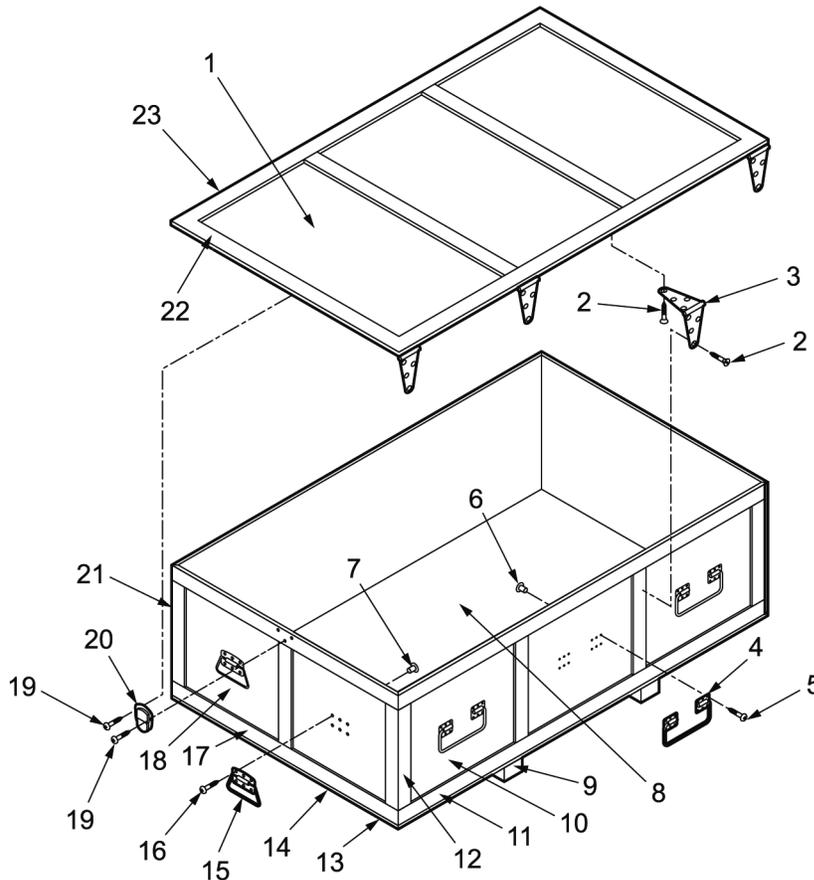

Figure 1. Fabricating the Storage Container.

2. To fabricate the box:
  - a. To fabricate the bottom of the box.
    - (1) Place two pieces of lumber (Figure 1, Item 13) WP 0042, Item 4) and four equally spaced pieces of lumber (Figure 1, Item 14) (WP 0042, Item 5) onto sheet of plywood (Figure 1, Item 8) (WP 0043, Item 4).
    - (2) Place two pieces of lumber (Figure 1, Item 9) (WP 0042, Item 6) onto the two centerpieces of lumber (Figure 1, Item 14) as illustrated.
    - (3) Secure the lumber to plywood using wood screws as available.
    - (4) Turn bottom over so it is supported by the two pieces of lumber (Figure 1, Item 9) as illustrated.

**NOTE**

The following procedure applies to both panels. The quantities listed are for one panel only.

- b. To fabricate the front and back panels of the box:
  - (1) Place two pieces of lumber (Figure 1, Item 11) and four equally spaced pieces of lumber (Figure 1, Item 12) onto sheet of plywood (Figure 1, Item 10) as illustrated.

**STORAGE CONTAINER REPLACEMENT - (CONTINUED)**

- (2) Secure the lumber to plywood using wood screws as available.

**NOTE**

The following procedure applies to both panels. The quantities listed are for one panel only.

- c. To fabricate the left and right side panels of the box:
  - (1) Place two pieces of lumber (Figure 1, Item 17) and three equally spaced pieces of lumber (Figure 1, Item 21) onto one sheet of plywood (Figure 1, Item 18) as illustrated.
  - (2) Secure the lumber to plywood to using wood screws as available.
- d. Assemble the front, back, left, and right side panels onto the bottom panel as illustrated. Secure the panels to bottom and each other using wood screws as available.

**Storage container hardware installation****NOTE**

The following procedure applies to multiple items. The quantities listed are for one panel only.

1. To install the folding handles:
  - a. Position the folding handle in place and align mounting holes, and then secure ten screws (Figure 1, Item 5).
  - b. Drill ten mounting holes necessary and insert tentee nuts (Figure 1, Item 6) from inside box.
  - c. Repeat procedure for remaining five folding handles.

**NOTE**

The following procedure applies to multiple items. The quantities listed are for one panel only.

2. To install the bail handles:
  - a. Position the bail handle (Figure 1, Item 15) in place as illustrated and mark mounting hole locations.
  - b. Drill five mounting holes as necessary, and insert five tee nuts (Figure 1, Item 7) from inside box.
  - c. Position bail handle in place, aligning mounting holes, and then secure using five screws (Figure 1, Item 16).
  - d. Repeat procedure for remaining three bail handles.
3. To install the hinges and attach the lid:
  - a. Place lid on box and position hinge (Figure 1, Item 3) in place as illustrated.
  - b. Mark mounting hole locations and drill eight pilot holes (four in lid and four in box).
  - c. Position hinge in place, align mounting holes, and then secure using eight screws (Figure 1, Item 2) (four in lid and four in box).
  - d. Repeat procedure for remaining three hinges.
4. To install the latch:
  - a. Position latch (Figure 1, Item 20) in place as illustrated.
  - b. Mark mounting holes locations, and drill six pilot holes (three in lid and three in box).
  - c. Position latch in place, aligning mounting holes, and then secure using six screws (Figure 1, Item 19) (three in lid and three in box).

**END OF TASK****END OF WORK PACKAGE**

Gloves, Men's (WP 0054, Table 1, Item 4)

**Equipment Condition**

Storage container empty

**Personnel Required**

Carpentry and Masonry Specialist, 12W - 2

---

**NOTE**

Repair is limited to replacement of missing or damaged components.

Disassemble only to the extent necessary to repair the item.

If the storage container must be replaced, refer to WP 0031.

The following procedures can apply to multiple storage containers.

The quantities listed in the procedures are for only one storage container.

**STORAGE CONTAINER ASSEMBLY REPAIR****Disassemble**

1. To disassemble for repair/replacement of parts:
  - a. Raise and support lid (Figure 1, Item 1).
  - b. Remove 16 screws (Figure 1, Item 2) and four hinges (Figure 1, Item 3).
  - c. Remove lid (Figure 1, Item 1) from storage container.
  - d. Remove six screws (Figure 1, Item 10), three screws per latch, and then latch (Figure 1, Item 11).
  - e. Remove five screws (Figure 1, Item 9) per each of four bail handles total, tee nuts (Figure 1, Item 7), and then each bail handle (Figure 1, Item 8).
  - f. Remove 10 screws (Figure 1, Item 5), tee nut (Figure 1, Item 6) from the six folding handles, and the folding handles (Figure 1, Item 4).
  - g. Replace any defective, missing, or damaged components.
  - h. If storage container was in use, place any removed items back in it.

STORAGE CONTAINER ASSEMBLY REPAIR - (CONTINUED)

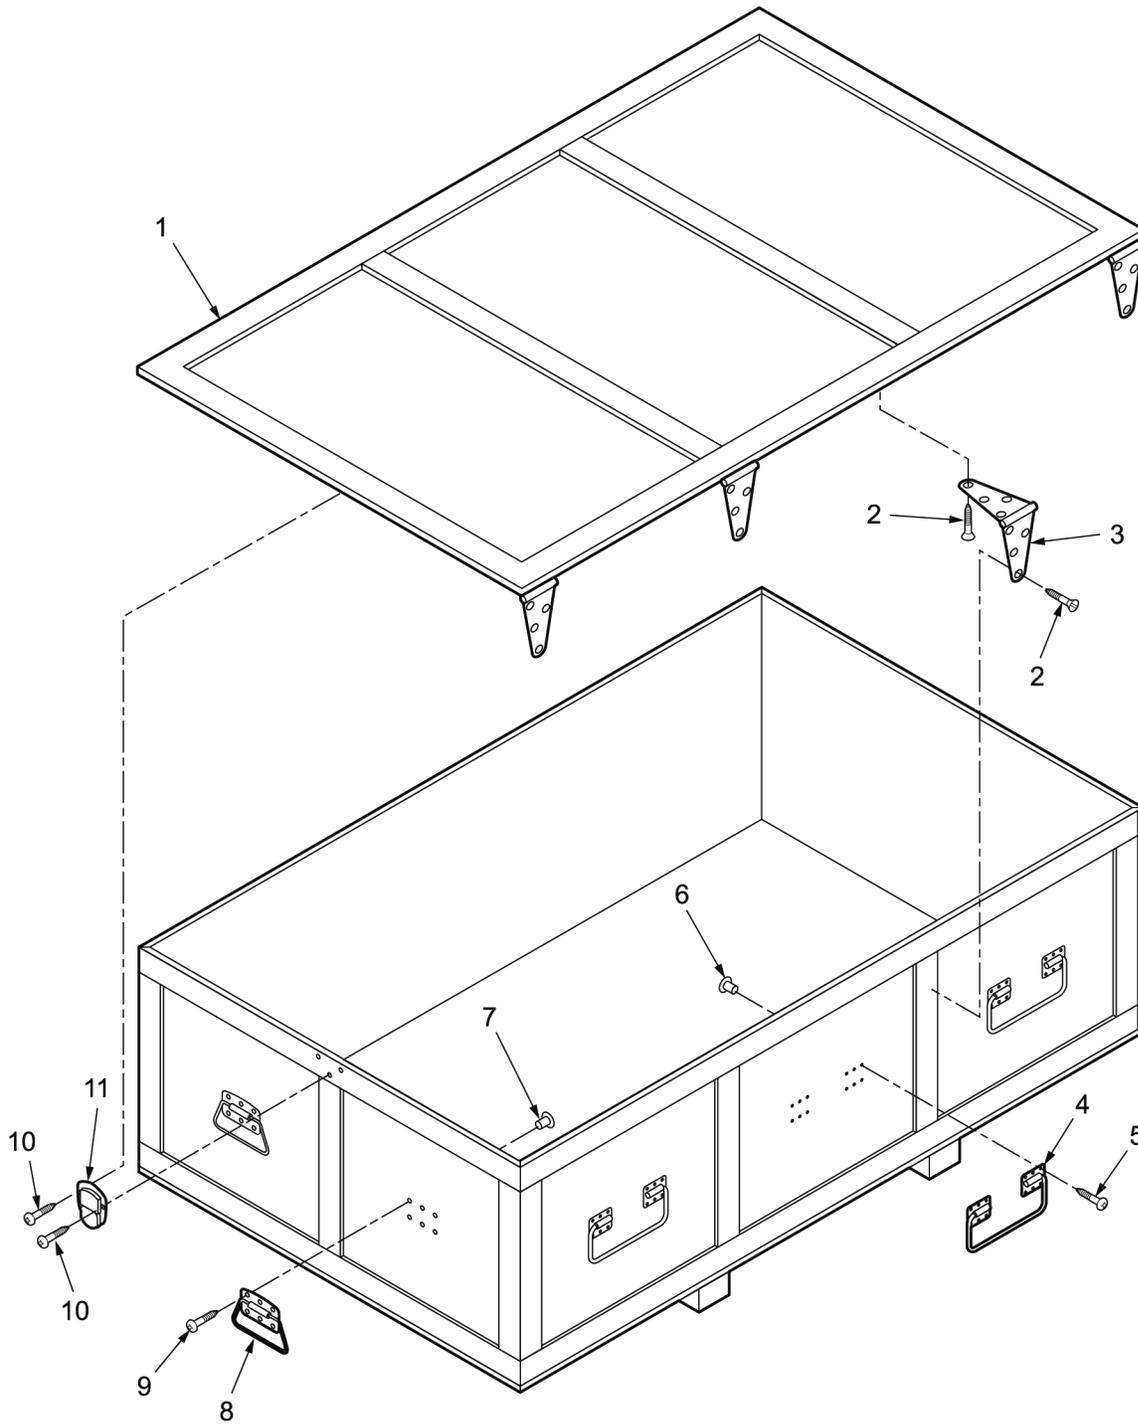

Figure 1. Disassembling the Storage Container.

2. Remove any usable hardware items from the old storage container as directed above.
3. Replace any unusable or missing hardware items to make a complete set for assembly.

---

**STORAGE CONTAINER ASSEMBLY REPAIR - (CONTINUED)****Assemble****NOTE**

For information about what materials and requirements are necessary to assemble the storage container, refer to the Repair Parts and Special Tools List (WP 0045) and the respective make from work packages.

1. Be sure any missing or damaged components have been replaced. Remove any items that may be stored inside the container.
2. Position folding handle (Figure 1, Item 4) in place and align mounting holes.
3. Secure handle using five screws (Figure 1, Item 5) and tee nuts (Figure 1, Item 6).
4. Position bail handle (Figure 1, Item 8) in place and align mounting holes.
5. Secure handle using five screws (Figure 1, Item 9) and tee nuts (Figure 1, Item 7).
6. Position latch (Figure 1, Item 11) in place and align mounting holes.
7. Secure using six screws (Figure 1, Item 10).
8. Place and support lid (Figure 1, Item 1) in position.
9. Position hinge (Figure 1, Item 3) in place and align mounting holes.
10. Secure using 16 screws (Figure 1, Item 2).
11. If the storage container was in use, place any removed items back in it.

**END OF TASK****END OF WORK PACKAGE**

## FIELD MAINTENANCE

## SHOWER FACILITY INTERCONNECTION HOSE ASSEMBLY REPLACE

## INITIAL SETUP:

**Tools and Special Tools**

Tool Set, General Mechanics (WP 0051, Table 2, Item 3)

**References**

WP 0005

**Personnel Required**

Quartermaster and Chemical Equipment Repairer, (91J) - 1

**Equipment Condition**

Shower powered off

## SHOWER FACILITY INTERCONNECTION HOSES REPLACEMENT

**Removal**

1. Release the quick disconnect coupling halves (Figure 1, Items 1 and 2) at each end of the interconnecting hose assembly and remove the interconnecting hose assembly from the shower assembly. coupling half (Figure 1, Item 1) is the male end of the quick disconnect. coupling half (Figure 1, Item 2) is the female end of the quick disconnect.
2. Remove the shower facility interconnection hose assembly.

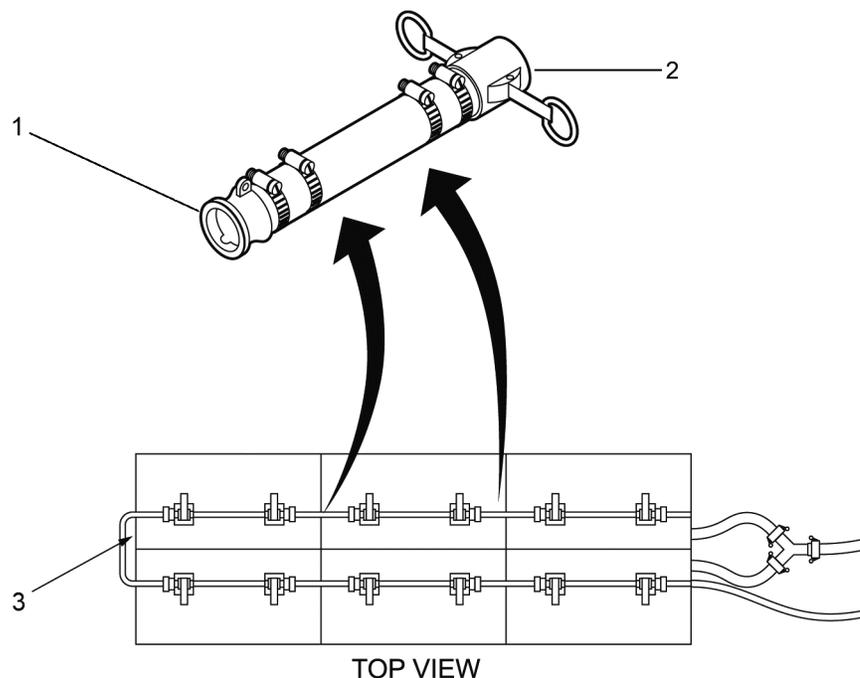

Figure 1. Typical Shower Facility Interconnection Hose.

**Installation**

1. Attach serviceable shower facility interconnection hose (Figure 1, Items 3) and secure couplings (Figure 1, Items 1 and 2).
2. Start up the shower facility, referring to the procedures in WP 0005.

**END OF TASK****END OF WORK PACKAGE**

## FIELD MAINTENANCE

## SUPPLY PUMP COLD LINE HOSES ASSEMBLY REPAIR

## INITIAL SETUP:

**Tools and Special Tools**

Tool Set, General Mechanics (WP 0051, Table 2, Item 3)

**Personnel Required**

Quartermaster and Chemical Equipment Repairer, (91J) - 1

**References**

WP 0005

Shower powered off  
Water drained from shower

## SUPPLY PUMP COLD LINE HOSES REPAIR

**Removal**

1. Loosen the two clamps (Figure 1, Item 2) and then pull hose (Figure 1, Item 3) end off coupling half (Figure 1, Item 1).
2. Remove the two clamps (Figure 1, Item 2).

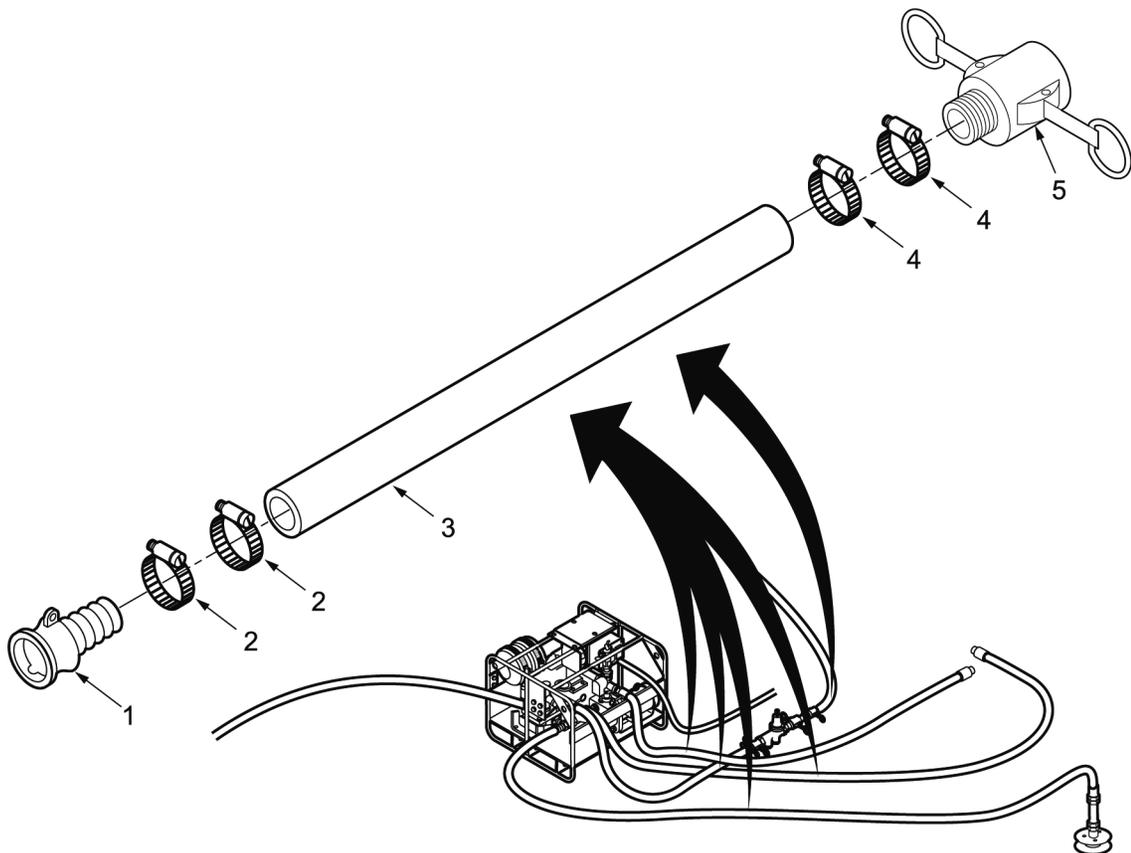

Figure 1. Typical Supply Pump Cold Line Hose.

3. Remove the two clamps (Figure 1, Item 4) and then pull hose (Figure 1, Item 3) end from the coupling half (Figure 1, Item 5). Remove the two clamps (Figure 1, Item 4).
4. Remove coupling halves (Figure 1, Items 1 and 5) from the supply pump.
5. Replace supply pump cold line hose (Figure 1, Item 3).

---

**SUPPLY PUMP COLD LINE HOSES ASSEMBLY REPAIR - (CONTINUED)****Installation**

1. Confirm that any defective, missing, or damaged components have been replaced.

**NOTE**

Supply pump cold line hose couplings are issued as a set.

2. Install coupling half (Figure 1, Item 1) and connector (Figure 1, Item 5) into the supply pump.
3. Slide two clamps (Figure 1, Item 4) over supply pump cold line hose (Figure 1, Item 3) end and install supply pump cold line hose onto coupling (Figure 1, Item 5). Be sure clamps are around coupling half.
4. Tighten clamps.
5. Slide two clamps (Figure 1, Item 2) over supply pump cold line hose (Figure 1, Item 3) end and install supply pump cold line hose onto coupling half (Figure 1, Item 1). Be sure clamps are around coupling half and tighten clamps.
6. Start up the shower facility, referring to the procedures in WP 0005.

**END OF TASK****END OF WORK PACKAGE**

---

**FIELD MAINTENANCE**  
**GENERAL REPAIR INSTRUCTIONS**

---

**INITIAL SETUP:****Personnel Required**

Shower/Laundry and Clothing Repair Specialist,  
(91J)

---

**SCOPE**

This section provides instructions to perform maintenance on all items that are the responsibility of field level maintenance.

Within reasonable limits of field capability and using approved shop procedures, straighten, align, or reform deformed parts to a serviceable condition. Fix or patch repairable cracks, holes, or tears.

All repair procedures are in disassembly/assembly sequence. Only disassemble an item as far as necessary to repair it, then locate the appropriate point in the assembly sequence to reassemble the item.

All components damaged beyond simple shop repair should be replaced. Refer to the appropriate work package in this manual for instructions on replacing a component.

**END OF WORK PACKAGE**

## FIELD MAINTENANCE

## ILLUSTRATED LIST OF MANUFACTURED ITEMS INTRODUCTION

**Scope**

This work package includes complete instructions for making items authorized to be manufactured or fabricated at the maintainer maintenance level.

**How To Use The Index Of Manufactured Items**

A part number index in alphanumeric order is provided for cross-referencing the part number of the item to be manufactured to the information which covers fabrication criteria.

**Explanation Of The Illustrations Of Manufactured Items**

All instructions needed by maintenance personnel to manufacture the item are included on the illustrations. All bulk materials needed for manufacture of an item are listed by part number or specification number in a tabular list on the illustration. All dimensions are given in inches with centimeters shown in parentheses.

**Manufactured Items Part Number Index**

**12-HEAD SHOWER SYSTEM**

**FIELD MAINTENANCE**

**12-HEAD SHOWER**

**INTRODUCTION**

**SCOPE**

This RPSTL lists and authorizes spares and repair parts; special tools; special test, measurement, and diagnostic equipment (TMDE); and other special support equipment required for performance of field maintenance of the 12-Head Shower. It authorizes the requisitioning, issue, and disposition of spares, repair parts, and special tools as indicated by the source, maintenance, and recoverability (SMR) codes.

**GENERAL**

In addition to the Introduction work package, this RPSTL is divided into the following work packages.

1. Repair Parts List Work Packages. Work packages containing lists of spare and repair parts authorized for use in the performance of maintenance at the levels determined by the MAC/SMR code. These work packages also include parts which must be removed for replacement of the authorized parts. Parts lists are composed of functional groups in ascending alphanumeric sequence, with the parts in each group listed in ascending Figure and item number sequence. Sending units, brackets, filters, and bolts are listed with the component they mount on. Bulk materials are listed by item name in the Bulk Items work package which follows the Parts List work package. Repair parts kits are listed separately in their own functional group. Repair parts for reparable special tools are also listed in a separate work package. Items listed are shown on the associated illustrations.
2. Bulk Items Work Package. This work package lists all items identified as 'bulk' in the parts lists. Due to the nature of bulk items, this work package does not include a Figure.
3. Special Tools List Work Packages. Work packages containing lists of special tools, special TMDE, and special support equipment authorized by this RPSTL (as indicated by Basis of Issue (BOI) information in the DESCRIPTION AND USABLE ON CODE (UOC) column). Tools that are components of common tool sets and/or Class VII are not listed.
4. Cross-Reference Indexes Work Packages. There are two cross reference indexes work packages in this RPSTL: the National Stock Number (NSN) Index work package, and the Part Number (P/N) Index work package. The National Stock Number Index work package refers you to the figure and item number. The Part Number Index work package refers you to the figure and item number.

**EXPLANATION OF COLUMNS IN THE REPAIR PARTS LIST AND SPECIAL TOOLS LIST WORK PACKAGES**

ITEM NO. (Column (1)). Indicates the number used to identify items called out in the illustration.

SMR CODE (Column (2)). The SMR code containing supply/requisitioning information, maintenance level authorization criteria, and disposition instruction, as shown in the following breakout. This entry may be subdivided into 4 subentries, one for each service.

**Table 1. SMR Code Explanation.**

Source Code <u>XX</u>	Maintenance Code <u>XX</u>	Recoverability Code <u>X</u>
1st two positions: How to get an , Item.	3rd position: Who can install, replace, or use the , Item.	4th position: Who can do complete repair on the item.
		5th position: Who determines disposition action on unserviceable items.

\*

Source Code. The source code tells you how you get an item needed for maintenance, repair, or overhaul of an end item/equipment. Explanations of source codes follow:

## 12-Head Shower - (CONTINUED)

Source Code	Application/Explanation
PA PB PC PD PE PF PG PH PR PZ	<p style="text-align: center;"><b>NOTE</b></p> <p>Items coded PC are subject to deterioration.</p> <p>Stock items, use the applicable NSN to requisition/request items with these source codes. They are authorized to the level indicated by the code entered in the third position of the SMR code.</p>
KD KF KB	<p>Items with these codes are not to be requested/ requisitioned individually. They are part of a kit which is authorized to the maintenance level indicated in the third position of the SMR code. The complete kit must be requisitioned and applied.</p>
MF—Made at field MH—Made at below depot sustainment level ML—Made at SRA MD—Made at depot MG—Navy only	<p>Items with these codes are not to be requisitioned/requested individually. They must be made from bulk material which is identified by the part number in the DESCRIPTION AND USABLE ON CODE (UOC) column listed in the bulk material group work package of the RPSTL. If the item is authorized to you by the third position code of the SMR code, but the source code indicates it is made at higher level, order the item from the higher level of maintenance.</p>
AF—Assembled by field level AH—Assembled by below depot sustainment level AL—Assembled by SRA AD—Assembled by depot AG—Navy only	<p>Items with these codes are not to be requested/requisitioned individually. The parts that make up the assembled item must be requisitioned or fabricated and assembled at the level of maintenance indicated by the source code. If the third position of the SMR code authorizes you to replace the item, but the source code indicates the item is assembled at a higher level, order the item from the higher level of maintenance.</p>
XA	<p>Do not requisition an “XA” coded item. Order the next higher assembly. (Refer to NOTE below.)</p>
XB	<p>If an item is not available from salvage, order it using the CAGEC and part number.</p>
XC	<p>Installation drawings, diagrams, instruction sheets, field service drawings; identified by manufacturer’s part number.</p>
XD	<p>Item is not stocked. Order an XD-coded item through local purchase or normal supply channels using the CAGEC and P/N given, if no NSN is available.</p>

**12-Head Shower - (CONTINUED)****NOTE**

Cannibalization or controlled exchange, when authorized, may be used as a source of supply for items with the above source codes except for those items source coded "XA" or those aircraft support items restricted by requirements of AR 750-1.

Maintenance Code. Maintenance codes tell you the level(s) of maintenance authorized to use and repair support items. The maintenance codes are entered in the third and fourth positions of the SMR code as follows:

Third Position. The maintenance code entered in the third position tells you the lowest maintenance level authorized to remove, replace, and use an item. The maintenance code entered in the third position will indicate authorization to the following levels of maintenance:

<b>Maintenance Code</b>	<b>Application/Explanation</b>
F –	Field maintenance can remove, replace, and use the item.
H –	Below Depot Sustainment maintenance can remove, replace, and use the item.
L –	Specialized repair activity can remove, replace, and use the item.
G –	Afloat and ashore intermediate maintenance can remove, replace, and use the item. (Navy only).
K –	Contractor facility can remove, replace, and use the item.
Z –	Item is not authorized to be removed, replace, or used at any maintenance level.
D –	Depot can remove, replace, and use the item.

\*NOTE– Army may use C in the third position. However, for joint service publications, Army will use O.

Fourth Position. The maintenance code entered in the fourth position tells you whether or not the item is to be repaired and identifies the lowest maintenance level with the capability to do complete repair (perform all authorized repair functions).

**NOTE**

Some limited repair may be done on the item at a lower level of maintenance, if authorized by the Maintenance Allocation Chart (MAC) and SMR codes.

<b>Maintenance Code</b>	<b>Application/Explanation</b>
F –	Field is the lowest level that can do complete repair of the item.
H –	Below Depot Sustainment is the lowest level that can do complete repair of the item.
L –	Specialized repair activity is the lowest level that can do complete repair of the item
D –	Depot is the lowest level that can do complete repair of the item.
G –	Both afloat and ashore intermediate levels are capable of complete repair of item. (Navy only)
K –	Complete repair is done at contractor facility.
Z –	Nonreparable. No repair is authorized.
B –	No repair is authorized. No parts or special tools are authorized for maintenance of "B" coded item. However, the item may be reconditioned by adjusting, lubricating, etc., at the user level.

**12-Head Shower - (CONTINUED)**

Recoverability Code. Recoverability codes are assigned to items to indicate the disposition action on unserviceable items. The recoverability code is shown in the fifth position of the SMR code as follows:

<b>Recoverability Code</b>	<b>Application/Explanation</b>
Z –	Nonreparable item. When unserviceable, condemn and dispose of the item at the level of maintenance shown in the third position of the SMR code.
F –	Reparable item. When uneconomically reparable, condemn and dispose of the item at the field level.
H –	Reparable item. When uneconomically reparable, condemn and dispose of the item at the below depot sustainment level.
D –	Reparable item. When beyond lower level repair capability, return to depot. Condemnation and disposal of item are not authorized below depot level.
L –	Reparable item. Condemnation and disposal not authorized below Specialized Repair Activity (SRA).
A –	Item requires special handling or condemnation procedures because of specific reasons such as precious metal content, high dollar value, critical material, or hazardous material). Refer to appropriate manuals/directives for specific instructions.
G –	Field level reparable item. Condemn and dispose at either afloat or ashore intermediate levels. (Navy only)
K –	Reparable item. Condemnation and disposal to be performed at contractor facility.

NSN (Column (3)). The NSN for the item is listed in this column.

CAGEC (Column (4)). The Commercial and Government Entity Code (CAGEC) is a five-digit code which is used to identify the manufacturer, distributor, or Government agency/activity that supplies the item.

PART NUMBER (Column (5)). Indicates the primary number used by the manufacturer (individual, company, firm, corporation, or Government activity), which controls the design and characteristics of the item by means of its engineering drawings, specifications, standards, and inspection requirements to identify an item or range of items.

**NOTE**

When you use an NSN to requisition an item, the item you receive may have a different P/N form the number listed.

DESCRIPTION AND USABLE ON CODE (UOC) (Column (6)). This column includes the following information:

1. The federal item name, and when required, a minimum description to identify the item.
2. Part numbers of bulk materials are referenced in this column in the line entry to be manufactured or fabricated.
3. Hardness Critical Item (HCI). A support item that provides the equipment with special protection from electromagnetic pulse (EMP) damage during a nuclear attack.
4. The statement END OF FIGURE appears just below the last item description in Column (6) for a given figure in both the repair parts list and special tools list work packages.

QTY (Column (7)). The QTY (quantity per figure) column indicates the quantity of the item used in the breakout shown on the illustration/figure, which is prepared for a functional group, subfunctional group, or an assembly. A "V" appearing in this column instead of a quantity indicates that the quantity is variable and quantity may change from application to application.

**12-Head Shower - (CONTINUED)**

**EXPLANATION OF CROSS-REFERENCE INDEXES WORK PACKAGES FORMAT AND COLUMNS**

1. National Stock Number (NSN) Index Work Package. NSN's in this index are listed in National Item Identification Number (NIIN) sequence.
  - STOCK NUMBER Column. This column lists the NSN in National item identification number (NIIN) sequence. The NIIN consists of the last nine digits of the NSN. When using this column to locate an item, ignore the first four digits of the NSN. However, the complete NSN should be used when ordering items by stock number.
  - For example, if the NSN is 5385-01-574-1476, the NIIN is 01-574-1476.
  - FIG. Column. This column lists the number of the figure where the item is identified/located. The figures are in numerical order in the repair parts list and special tools list work packages.
  - ITEM Column. The item number identifies the item associated with the figure listed in the adjacent FIG. column. This item is also identified by the NSN listed on the same line.
2. Part Number (P/N) Index Work Package. P/Ns in this index are listed in ascending alphanumeric sequence (vertical arrangement of letter and number combinations which places the first letter or digit of each group in order A through Z, followed by the numbers 0 through 9 and each following letter or digit in like order.)
  - PART NUMBER Column. Indicates the P/N assigned to the item.
  - FIG. Column. This column lists the number of the figure where the item is identified/located in the repair parts list and special tools list work packages.
  - ITEM Column. The item number is the number assigned to the item as it appears in the figure referenced in the adjacent figure number column.

**SPECIAL INFORMATION**

UOC. The UOC appears in the lower left corner of the Description Column heading. Usable on codes are shown as "UOC:" in the Description Column (justified left) on the first line under the applicable item nomenclature. Uncoded items are applicable to all models. Identification of the UOCs used in the RPSTL are:

<u>Code</u>	<u>Used On</u>
N/A	N/A

Fabrication Instructions. Bulk materials required to manufacture items are listed in the bulk material functional group of this RPSTL. Part numbers for bulk material are also referenced in the Description Column of the line item entry for the item to be manufactured/fabricated. Detailed fabrication instructions for items source coded to be manufactured or fabricated are found in WP 0042 — WP 0049() of this technical manual.

Index Numbers. Items which have the word BULK in the figure column will have an index number shown in the item number column. This index number is a cross-reference between the NSN/Part Number (P/N) index work packages and the bulk material list in the repair parts list work package.

Illustrations List. The illustrations in this RPSTL contain field authorized items. Illustrations published in (enter applicable TM number for the higher maintenance level RPSTL, e.g., for field, below depot sustainment, etc.) that contain field authorized items also appear in this RPSTL. The tabular list in the repair parts list work package contains only those parts coded "F" in the third position of the SMR code, therefore, there may be a break in the item number sequence.

---

**12-Head Shower - (CONTINUED)****HOW TO LOCATE REPAIR PARTS**

1. When NSNs or Part Numbers Are Not Known.
  - First. Using the table of contents, determine the assembly group to which the item belongs. This is necessary since figures are prepared for assembly groups and subassembly groups, and lists are divided into the same groups.
  - Second. Find the figure covering the functional group or the subfunctional group to which the item belongs.
  - Third. Identify the item on the figure and note the number(s).
  - Fourth. Look in the repair parts list work packages for the figure and item numbers. The NSNs and part numbers are on the same line as the associated item numbers.
2. When NSN Is Known.
  - First. If you have the NSN, look in the STOCK NUMBER column of the NSN index work package. The NSN is arranged in NIIN sequence. Note the figure and item number next to the NSN.
  - Second. Turn to the figure and locate the item number. Verify that the item is the one you are looking for.
3. When Part Number Is Known.
  - First. If you have the part number and not the NSN, look in the PART NUMBER column of the part number index work package. Identify the figure and item number.
  - Second. Look up the item on the figure in the applicable repair parts list work package.

**END OF WORK PACKAGE**

END OF WORK PACKAGE

**CHAPTER 8**  
**SUPPORTING INFORMATION**  
**FOR**  
**12-HEAD SHOWER SYSTEM**

---

**OPERATOR INSTRUCTIONS**
**REFERENCES**

---

**SCOPE**

This work package lists forms, pamphlets, field manuals, technical manuals, military specifications, military standards, technical bulletins, technical circulars and common tables of allowances referenced in this manual.

**ARMY REGULATIONS**

AR 700-138	Army Logistics Readiness and Sustainability
AR 750-1	Army Material Maintenance Policy

**COMMON TABLES OF ALLOWANCES**

CTA 50-970	Expendable/Durable Items (Except: Medical, Class V, Repair Parts, and Heraldic Items),
CTA 8-100	Army Medical Department Expendable/Durable Items

**DA PAMPHLETS**

DA PAM 738-751	Functional Users Manual for the Army Maintenance Management System (TAMMS)
DA PAM 750-8	The Army Maintenance Management System (TAMMS) Users Manual

**FIELD MANUALS**

FM 3-5	NBC Decontamination
FM 4-25.11	First Aid for Soldiers

**FORMS**

DA Form 12-R	Request for an Establishment of a Publications Account
DA Form 2028	Recommended Changes to Equipment Publications
SF 364	Report of Discrepancy
SF 368	Product Quality Deficiency Report (PQDR)

**TECHNICAL MANUALS**

TM 750-244-3	Procedures for Destruction of Equipment to Prevent Enemy Use (Mobility Equipment Command)
TM 10-4520-259-13&P	Operator's, Unit and Direct Support Maintenance Manual (Including Repair Parts and Special Tools List) for Heater, Water, Liquid Fuel.
TM 10-4520-266-13&P	Operator and Field Maintenance Manual Including Repair Parts and Special Tools List (RPSTL) for Heater, Water, 400,000 BTU
TM 10-8340-244-13&P	Operator and Field Maintenance Manual Including Repair Parts and Special Tools List (RPSTL) for Tent, Extendable, Modular, Personnel (TEMPER), Air-Supported

**FIELD MAINTENANCE****MAINTENANCE ALLOCATION CHART (MAC) INTRODUCTION**

---

**The Army Maintenance System MAC**

This introduction provides a general explanation of all maintenance and repair functions authorized at the two maintenance levels under the Two-Level Maintenance System concept.

This MAC (immediately following the introduction) designates overall authority and responsibility for the performance of maintenance functions on the identified end item or component. The application of the maintenance functions to the end item or component shall be consistent with the capacities and capabilities of the designated maintenance levels, which are shown on the MAC in column (4) as:

- Field – includes two subcolumns, Crew (C) and Maintainer (F).
- Sustainment – includes two subcolumns, Below Depot (H) and Depot (D).

The maintenance to be performed at field and sustainment levels is described as follows:

1. Crew maintenance. The responsibility of a using organization to perform maintenance on its assigned equipment. It normally consists of inspecting, servicing, lubricating, adjusting, and replacing parts, minor assemblies, and subassemblies. The replace function for this level of maintenance is indicated by the letter "C" in the third position of the Source, Maintenance, and Recoverability (SMR) code. A "C" appearing in the fourth position of the SMR code indicates complete repair is possible at the crew maintenance level.
2. Maintainer maintenance. Maintenance accomplished on a component, accessory, assembly, subassembly, plug-in unit, or other portion either on the system or after it is removed. The replace function for this level of maintenance is indicated by the letter "F" appearing in the third position of the SMR code. An "F" appearing in the fourth position of the SMR code indicates complete repair is possible at the field maintenance level. Items are returned to the user after maintenance is performed at this level.
3. Below depot sustainment. Maintenance accomplished on a component, accessory, assembly, subassembly, plug-in unit, or other portion either on the system or after it is removed. The replace function for this level of maintenance is indicated by the letter "H" appearing in the third position of the SMR code. An "H" appearing in the fourth position of the SMR code indicates complete repair is possible at the below depot sustainment maintenance level. Items are returned to the supply system after maintenance is performed at this level.
4. Depot sustainment. Maintenance accomplished on a component, accessory, assembly, subassembly, plug-in unit, or other portion either on the system or after it is removed. The replace function for this level of maintenance is indicated by the letter "D" or "K" appearing in the third position of the SMR code. Depot sustainment maintenance can be performed by either depot personnel or contractor personnel. A "D" or "K" appearing in the fourth position of the SMR code indicates complete repair is possible at the depot sustainment maintenance level. Items are returned to the supply systems after maintenance is performed at this level.

The tools and test equipment requirements table (immediately following the MAC) lists the tools and test equipment (both special tools and common tool sets) required for each maintenance function as referenced from the MAC.

The remarks table (immediately following the tools and test equipment requirements) contains supplemental instructions and explanatory notes for a particular maintenance function.

**MAINTENANCE ALLOCATION CHART (MAC) INTRODUCTION - (CONTINUED)****MAINTENANCE FUNCTIONS**

Maintenance functions are limited to and defined as follows:

1. **Inspect.** To determine the serviceability of an item by comparing its physical, mechanical, and/or electrical characteristics with established standards through examination (e.g., by sight, sound, or feel). This includes scheduled inspection and gaugings and evaluation of cannon tubes.
2. **Test.** To verify serviceability by measuring the mechanical, pneumatic, hydraulic, or electrical characteristics of an item and comparing those characteristics with prescribed standards on a scheduled basis, i.e., load testing of lift devices and hydrostatic testing of pressure hoses.
3. **Service.** Operations required periodically to keep an item in proper operating condition, e.g., to clean (includes decontaminate, when required), to preserve, to drain, to paint, or to replenish fuel, lubricants, chemical fluids, or gases. This includes scheduled exercising and purging of recoil mechanisms. The following are examples of service functions:
  - a. **Unpack.** To remove from packing box for service or when required for the performance of maintenance operations.
  - b. **Repack.** To return item to packing box after service and other maintenance operations.
  - c. **Clean.** To rid the item of contamination.
  - d. **Touch up.** To spot paint scratched or blistered surfaces.
  - e. **Mark.** To restore obliterated identification.
4. **Adjust.** To maintain or regulate, within prescribed limits, by bringing into proper position, or by setting the operating characteristics to specified parameters.
5. **Align.** To adjust specified variable elements of an item to bring about optimum or desired performance.
6. **Calibrate.** To determine and cause corrections to be made or to be adjusted on instruments of test, measuring, and diagnostic equipment used in precision measurement. Consists of comparisons of two instruments, one of which is a certified standard of known accuracy, to detect and adjust any discrepancy in the accuracy of the instrument being compared.
7. **Remove/install.** To remove and install the same item when required to perform service or other maintenance functions. Install may be the act of emplacing, seating, or fixing into position a spare, repair part, or module (component or assembly) in a manner to allow the proper functioning of an equipment or system.
8. **Paint (ammunition only).** To prepare and spray color coats of paint so that the ammunition can be identified and protected. The color indicating primary use is applied, preferably, to the entire exterior surface as the background color of the item. Other markings are to be repainted as original so as to retain proper ammunition identification.
9. **Replace.** To remove an unserviceable item and install a serviceable counterpart in its place. "Replace" is authorized by the MAC and assigned maintenance level is shown as the third position code of the SMR code.
10. **Repair.** The application of maintenance services, including fault location/troubleshooting, removal/installation, disassembly/assembly procedures and maintenance actions to identify troubles and restore serviceability to an item by correcting specific damage, fault, malfunction, or failure in a part, subassembly, module (component or assembly), end item, or system.

**NOTE**

The following definitions are applicable to the "repair" maintenance function:

**Services.** Inspect, test, service, adjust, align, calibrate, and/or replace.

**Fault location/troubleshooting.** The process of investigating and detecting the cause of equipment malfunctioning; the act of isolating a fault within a system or Unit Under Test (UUT).

**MAINTENANCE ALLOCATION CHART (MAC) INTRODUCTION - (CONTINUED)**

Disassembly/assembly. The step-by-step breakdown (taking apart) of a spare/functional group coded item, to the level of its least component, that is assigned an SMR code for the level of maintenance under consideration (i.e., identified as maintenance significant).

Actions. Welding, grinding, riveting, straightening, facing, machining, and/or resurfacing.

11. Overhaul. That maintenance effort (service/action) prescribed to restore an item to a completely serviceable/operational condition as required by maintenance standards in appropriate technical publications. Overhaul is normally the highest degree of maintenance performed by the Army. Overhaul does not normally return an item to like new condition.
12. Rebuild. Consists of those services/actions necessary for the restoration of unserviceable equipment to a like new condition in accordance with original manufacturing standards. Rebuild is the highest degree of material maintenance applied to Army equipment. The rebuild operation includes the act of returning to zero those age measurements (e.g., hours/miles) considered in classifying Army equipment/components.

**Explanation of Columns in the MAC**

Column (1) Group Number. Column (1) lists Functional Group Code (FGC) numbers, the purpose of which is to identify maintenance significant components, assemblies, subassemblies, and modules with the Next Higher Assembly (NHA).

Column (2) Component/Assembly. Column (2) contains the item names of components, assemblies, subassemblies, and modules for which maintenance is authorized.

Column (3) Maintenance Function. Column (3) lists the functions to be performed on the item listed in column (2). (For a detailed explanation of these functions refer to "Maintenance Functions" outlined above.)

Column (4) Maintenance Level. Column (4) specifies each level of maintenance authorized to perform each function listed in column (3), by indicating work time required (expressed as manhours in whole hours or decimals) in the appropriate subcolumn. This work time figure represents the active time required to perform that maintenance function at the indicated level of maintenance. If the number or complexity of the tasks within the listed maintenance function varies at different maintenance levels, appropriate work time figures are to be shown for each level. The work time figure represents the average time required to restore an item (assembly, subassembly, component, module, end item, or system) to a serviceable condition under typical field operating conditions. This time includes preparation time (including any necessary disassembly/assembly time), troubleshooting/fault location time, and quality assurance time in addition to the time required to perform the specific tasks identified for the maintenance functions authorized in the MAC. The symbol designations for the various maintenance levels are as follows:

Field:

C Crew maintenance

F Maintainer maintenance

Sustainment:

L Specialized Repair Activity (SRA)

H Below depot maintenance

D Depot maintenance

**NOTE**

The "L" maintenance level is not included in column (4) of the MAC. Functions to this level of maintenance are identified by work time figure in the "H" column of column (4), and an associated reference code is used in the REMARKS column (6). This code is keyed to the remarks, and the SRA complete repair application is explained there.

---

**MAINTENANCE ALLOCATION CHART (MAC) INTRODUCTION - (CONTINUED)**

Column (5) Tools and Equipment Reference Code. Column (5) specifies, by code, those common tool sets (not individual tools), common Test, Measurement, and Diagnostic Equipment (TMDE), and special tools, special TMDE, and special support equipment required to perform the designated function. Codes are keyed to the entries in the tools and test equipment table.

Column (6) Remarks Code. When applicable, this column contains a letter code, in alphabetical order, which is keyed to the remarks table entries.

**Explanation of Columns in the Tools and Test Equipment Requirements**

Column (1) Tool or Test Equipment Reference Code. The tool or test equipment reference code correlates with a code used in column (5) of the MAC.

Column (2) Maintenance Level. The lowest level of maintenance authorized to use the tool or test equipment.

Column (3) Nomenclature. Name or identification of the tool or test equipment.

Column (4) National Stock Number (NSN). The NSN of the tool or test equipment.

Column (5) Tool Number. The manufacturer's part number.

**Explanation of Columns in the Remarks**

Column (1) Remarks Code. The code recorded in column (6) of the MAC.

Column (2) Remarks. This column lists information pertinent to the maintenance function being performed as indicated in the MAC.

**FIELD MAINTENANCE****COMPONENTS OF END ITEM (COEI) AND BASIC ISSUE ITEMS (BII) LISTS**

---

**SCOPE**

This work package lists COEI and BII for the 12-head shower to help you inventory items for safe and efficient operation of the equipment.

**GENERAL**

The COEI and BII information is divided into the following lists:

**Components of End Item (COEI).** This list is for information purposes only and is not authority to requisition replacements. These items are part of the 12-head shower. As part of the end item, these items must be with the end item whenever it is issued or transferred between property accounts. Items of COEI are removed and separately packaged for transportation or shipment only when necessary. Illustrations are furnished to help you find and identify the items.

**Basic Issue Items (BII).** These essential items are required to place the 12-head shower in operation, operate it, and to do emergency repairs. Although shipped separately packaged, BII must be with the 12-head shower during operation and when it is transferred between property accounts. Listing these items is your authority to request/requisition them for replacement based on authorization of the end item by the TOE/MTOE. Illustrations are furnished to help you find and identify the items.

**Explanation of Columns in the COEI List and BII List**

Column (1) Item Number. Gives you the reference number of the item listed.

Column (2) National Stock Number (NSN) and Illustration. Identifies the stock number of the item to be used for requisitioning purposes and provides an illustration of the item.

Column (3) Description, Part Number/(CAGEC). Identifies the Federal item name (in all capital letters) followed by a minimum description when needed. The stowage location of COEI and BII is also included in this column. The last line below the description is the part number and the Commercial and Government Entity Code (CAGEC) (in parentheses).

Column (4) Usable On Code. When applicable, gives you a code if the item you need is not the same for different models of equipment.

Column (5) U/I. Unit of Issue (U/I) indicates the physical measurement or count of the item as issued per the National Stock Number shown in column (2).

Column (6) Qty Rqr. Indicates the quantity required.

ADDITIONAL AUTHORIZATION LIST**

**INTRODUCTION****Scope**

This work package lists additional items you are authorized for the support of the 12-head shower.

**General**

This list identifies items that do not have to accompany the (enter short item name) and that do not have to be turned in with it. These items are all authorized to you by CTA, MTOE, TDA, or JTA.

**Explanation Of Columns In The AAL**

Column (1) National Stock Number (NSN). Identifies the stock number of the item to be used for requisitioning purposes.

Column (2) Description, Part Number/(CAGEC). Identifies the Federal item name (in all capital letters) followed by a minimum description when needed. The last line below the description is the part number and the Commercial and Government Entity Code (CAGEC) (in parentheses).

Column (3) Usable On Code. When applicable, gives you a code if the item you need is not the same for different models of equipment.

Column (4) U/I. Unit of Issue (U/I) indicates the physical measurement or count of the item as issued per the National Stock Number shown in column (1).

Column (5) Qty Recm. Indicates the quantity recommended.

**FIELD MAINTENANCE**  
**EXPENDABLE AND DURABLE ITEMS LIST**

**Scope**

This work package lists expendable and durable items that you will need to operate and maintain the 12-head shower module. This list is for information only and is not authority to requisition the listed items. These items are authorized to you by CTA 50-970, Expendable/Durable Items (Except Medical, Class V Repair Parts, and Heraldic Items), CTA 50-909, Field and Garrison Furnishings and Equipment or CTA 8-100, Army Medical Department Expendable/Durable Items.

**Explanation Of Columns In The Expendable/Durable Items List**

Column (1) Item No. This number is assigned to the entry in the list and is referenced in the narrative instructions to identify the item (e.g., Use brake fluid (WP 0098, item 5)).

Column (2) Level. This column identifies the lowest level of maintenance that requires the listed item.

Column (3) National Stock Number (NSN). This is the NSN assigned to the item which you can use to requisition it.

Column (4) Item Name, Description, Part Number/(CAGEC). This column provides the other information you need to identify the item. The last line below the description is the part number and the Commercial and Government Entity Code (CAGEC) (in parentheses).

Column (5) U/I. Unit of Issue (U/I) code shows the physical measurement or count of an item, such as gallon, dozen, gross, etc.”

# The Metric System and Equivalents

## Linear Measure

1 centimeter = 10 millimeters = .39 inch  
 1 decimeter = 10 centimeters = 3.94 inches  
 1 meter = 10 decimeters = 39.37 inches  
 1 dekameter = 10 meters = 32.8 feet  
 1 hectometer = 10 dekameters = 328.08 feet  
 1 kilometer = 10 hectometers = 3,280.8 feet

## Weights

1 centigram = 10 milligrams = .15 grain  
 1 decigram = 10 centigrams = 1.54 grains  
 1 gram = 10 decigrams = .035 ounce  
 1 dekagram = 10 grams = .35 ounce  
 1 hectogram = 10 dekagrams = 3.52 ounces  
 1 kilogram = 10 hectograms = 2.2 pounds  
 1 quintal = 100 kilograms = 220.46 pounds  
 1 metric ton = 10 quintals = 1.1 short tons

## Liquid Measure

1 centiliter = 10 milliliters = .34 fl. ounce  
 1 deciliter = 10 centiliters = 3.38 fl. ounces  
 1 liter = 10 deciliters = 33.81 fl. ounces  
 1 dekaliter = 10 liters = 2.64 gallons  
 1 hectoliter = 10 dekaliters = 26.42 gallons  
 1 kiloliter = 10 hectoliters = 264.18 gallons

## Square Measure

1 sq. centimeter = 100 sq. millimeters = .155 sq. inch  
 1 sq. decimeter = 100 sq. centimeters = 15.5 sq. inches  
 1 sq. meter (centare) = 100 sq. decimeters = 10.76 sq. feet  
 1 sq. dekameter (are) = 100 sq. meters = 1,076.4 sq. feet  
 1 sq. hectometer (hectare) = 100 sq. dekameters = 2.47 acres  
 1 sq. kilometer = 100 sq. hectometers = .386 sq. mile

## Cubic Measure

1 cu. centimeter = 1000 cu. millimeters = .06 cu. inch  
 1 cu. decimeter = 1000 cu. centimeters = 61.02 cu. inches  
 1 cu. meter = 1000 cu. decimeters = 35.31 feet

## Approximate Conversion Factors

<i>To change</i>	<i>To</i>	<i>Multiply by</i>	<i>To change</i>	<i>To</i>	<i>Multiply by</i>
inches	centimeters	2.540	ounce-inches	newton-meters	.007062
feet	meters	.305	centimeters	inches	.394
yards	meters	.914	meters	feet	3.280
miles	kilometers	1.609	meters	yards	1.094
square inches	square centimeters	6.451	kilometers	miles	.621
square feet	square meters	.093	square centimeters	square inches	.155
square yards	square meters	.836	square meters	square feet	10.764
square miles	square kilometers	2.590	square meters	square yards	1.196
acres	square hectometers	.405	square kilometers	square miles	.386
cubic feet	cubic meters	.028	square hectometers	acres	2.471
cubic yards	cubic meters	.765	cubic meters	cubic feet	35.315
fluid ounces	milliliters	29.573	cubic meters	cubic yards	1.308
pints	liters	.473	milliliters	fluid ounces	.034
quarts	liters	.946	liters	pints	2.113
gallons	liters	3.785	liters	quarts	1.057
ounces	grams	28.349	liters	gallons	.264
pounds	kilograms	.454	grams	ounces	.035
short tons	metric tons	.907	kilograms	pounds	2.205
pound-feet	newton-meters	1.356	metric tons	short tons	1.102
pound-inches	newton-meters	.11296			

## Temperature (Exact)

°F Fahrenheit temperature      5/9 (after subtracting 32)      Celsius temperature      °C
