

Warm Windshield Slowly

Most drivers will do just about anything to warm up the SUSV's cab in sub-zero temperatures. That includes spending their own money to buy a portable, battery-operated heater.

But there's a problem with those heaters. If you put 'em in the wrong place—like on the console beside you or on the dashboard—the heat that keeps you warm also heats up the windshield. And, when hot air meets extremely cold glass...*crack!*

So, next time during start-up, let your SUSV warm up the way it's supposed to—gradually—with the cab heater.

M992A2 Ammo Carriers ...

Get a Handle on Loose Handles

Crewmen, that old enemy—vibration—will do a number on your M992A2 carrier if you forget to tighten down the top center door handles.

Those handles have a tendency to vibrate loose and turn up missing.

Replace any missing handles with NSN 2540-00-135-6547. Then keep a close eye on 'em. If they're loose, tighten down the handles.
