

# PUT DOWN DIRTY OIL

**T**he DEUCE is one tough workhorse, but dirty oil in its hydraulic system can make it turn up lame in a hurry.

So keep your oil supply covered and protected. Then before you add hydraulic fluid, wipe off any dirt around the DEUCE's filler cap. If it's raining or dusty, use a clean rag around the oil can nozzle and filler hole while you add oil.

Also be careful when adding oil. The oil can nozzle can tear a hole in the side of the strainer or knock out its bottom. Then dirt has a straight path to the tank. Check out the strainer. If it's damaged or missing, tell your mechanic.

Finally, replace the cap and snug it down when you're finished.

Use these oil PM tips and you'll keep the dirt where it belongs-- out in front of the blade!
