

AH-64A...

PROTECT RADIO CONSOLE

Your Apache's radio console takes a beating when you take out the heavy crew seats. It also gets dinged during other maintenance inside the cockpit.

Once you bend or break knobs, switches and dials, you've ended your communicating.

So protect the console. Get your sheet metal shop to make a cover from .040-in aluminum sheet.

Use these dimensions:

Make sure all edges are smooth before you use the cover. And paint it red so you won't forget to remove it when your work is done.

Make sure the cover does not rest on any knobs, dials or switches when you install it. Keep your feet off the cover too—it's not a foot rest.

Drill a small hole in one corner of the cover and attach a "Remove Before Flight" streamer.
