

COVER HOLES BEFORE WASHING

Just like you, once in a while your Kiowa Warrior needs a bath. But wash it with care. Water runoff from the engine deck can get into the avionics bay and short out the remote control circuit breaker (RCCB) inverter and relays.

So before you bathe your bird, tape over the holes in the top of the cover assembly with duct tape, NSN 5640-00-103-2254.

When the RCCB goes, power to the mast-mounted sight is knocked out. It won't be able to search for targets or get a fix on forward positions when you power up your aircraft. Other electrical relays are in harm's way, too, if not protected from water.

Water is needed to give your bird a good cleaning. But too much of a good thing can wreak havoc on electrical and avionic components. So cover those holes before you wash.
