

Electrostatic Discharge...

# ESD KIT STOPS STATIC

If you've ever zapped someone with just a touch, you know what an electrostatic discharge is. That small spark of electricity won't hurt you, but it can do some **serious** damage to commo parts and circuit cards.

Discharge your ESD troubles by using ESD field service kit, NSN 4940-01-253-5368. It limits static buildup and carries charges away from your body (and the electronic part you're handling) to ground.

THE KIT  
COMES  
WITH...

Two wrist  
straps

Work-surface mat

Three Type II antistatic pouches  
and three Type I barrier bags...

...for shipping or  
storing circuit cards

One grounding cord

INSTRUCTIONS FOR  
A SELF-TEST AND  
HOW TO USE THE KIT  
ARE PRINTED ON THE  
WORK-SURFACE MAT.
