

CAB CLEANING REMINDER

The FMTV's cab floor seems like a handy area to put rags, tools, soda cans and chains during the day's run.

Problem is, these items can get under the accelerator or brake pedals and keep them from working when you need 'em. That can lead to an accident.

So before you head out of the motor pool, get rid of anything on the cab floor that gets in the way of the controls.

- You can use low pressure water from a garden hose to clean mud and sand from the cab floor.
- Be sure to remove the cab's drain plugs to allow water to drain out.
- Never use water to clean on or under the vehicle's dashboard. That can cause electrical damage.
- Mop up excess water with rags.
