

THE TRICKLE-DOWN EFFECT

There's nothing better than a cool drink of water on a hot day. There's also nothing more frustrating than getting just a trickle of water from the faucet of your M1112 water trailer.

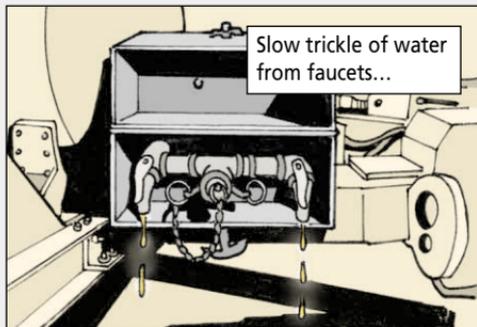

There's plenty of water in the trailer and the faucet is on full blast, so what's the problem?

Could be that you forgot to loosen the small nut on the manhole cover. If the nut's not loosened, air can't get into the tank and a vacuum forms. That slows the water down to a trickle.

I'M DYIN' OF THIRST HERE!

CAN'T I HAVE A LITTLE WATER?!

A LITTLE IS THE BEST YOU'LL GET UNLESS YOU LOOSEN THE NUT ON MY MANHOLE COVER!

...can be cured by loosening nut

JUST REMEMBER TO LOOSEN THE NUT...

...AND YOU'LL SOON HAVE ALL THE WATER YOU CAN DRINK.
