# CORROSION AND RUST NEVER SLEEP!

Army equipment is attacked by corrosion day-in and day-out. Rain, salt, wind and sand take their toll. The destruction can be enormous, and the cost staggering.

Your best weapon against corrosion is rust inhibitor. Just wipe or spray on the inhibitor every 8 months to the inside and underneath your vehicles. It slows the spread of new rust and cleans up old rust.

It won't harm painted surfaces, plastics, rubber, glass or wiring, but it will make them shine for a week or two. That ruins your camouflage, so keep it off the outside of your equipment.

The inhibitor works by eliminating moisture that holds salt, dirt and other pollutants that eat up metal. It also lubes moving parts and penetrates existing rust.

The inhibitor is petroleum-based and contains no silicones, solvents, or anything else classified as hazardous. Even though the inhibitor contains no hazardous material, the headshed recommends that you wear a respirator, goggles and gloves when applying it because of possible irritation to your respiratory tract or skin.

ORDER THE  
AMOUNT OF  
INHIBITOR  
YOU NEED...

Quantity	NSN 8030-01-414-
16-oz bottles (12)	7423
5-gal container	8947
55-gal drum	7430

NSN 8030-01-389-1413 brings a 55-gal drum of inhibitor, a spray applicator and an instruction video. You can get a free copy of the video by calling (800) 856-6798.

As a rule of thumb, it takes about 2 gallons to treat a HMMWV and up to 3 gallons for a 2½-ton or 5-ton truck.
