

Tools...

# WHAT NEEDS CALIBRATING?

LOOK AT ALL THESE TOOLS!

NOW I HAVE TO FIGURE OUT WHICH ONES ARE GOING TO NEED CALIBRATING EVERY YEAR.

NO PROBLEM. JUST LOOK IN EM 0022.

Dear Half-Mast,

Is there any way to look at a sets, kits, and outfits (SKO) component list (CL) for a tool set and tell which tools in it need to be calibrated annually?

SFC J.F.

Dear Sergeant J.F.

SKO CLs are just beginning to identify TMDE that requires calibration. A better method would be to order EM 0022, TM 43-TMDE (IDN 344568), through normal publications channels. This CD contains all TMDE regulations and instructions for identifying and calibrating your equipment. *Half-Mast*

Water Purification Unit...

# A JOLT FROM HEAD TO TOE!

**A** 600-GPH reverse osmosis water purification unit (ROWPU) that hasn't run in a while might shock you! That's because the unit's ground may be corroded, not connected or gone.

Any time your ROWPU has sat idle for a while, look for broken wires or loose connections inside and outside the junction box.

Eyeball the connections on the ground wire at the frame and the rod. Look for corrosion or a loose connection. Also make sure each pump has a ground.

If you find anything wrong with the ground, fix what you can and report what you can't before you or anyone else uses it.
