

# KEEP WATER OUT WHEN CLEANING

CLEANING TIME AGAIN? WHAT ABOUT THE DAMAGE TO MY LRUs?

DON'T WORRY. IT'S IN THE BAG!

A GOOD WASHING IS THE BEST WAY TO KEEP YOUR MLRS NICE AND CLEAN. BUT BEFORE YOU GRAB THAT WATER HOSE, KEEP THESE THINGS IN MIND...

- Tighten all LRU cables and cannon plugs before washing. Loose connectors will let in water that can cause short circuits.
- Cover the electronics unit (EU) and electronics box with a plastic bag before washing. Both boxes have a gasket to protect against water, but you never know when the gasket will go bad. The bag provides an extra line of defense. Don't forget to remove bag after washing it.

Cover EU with plastic bag before washing vehicle

- Park the vehicle so water can drain freely from the hull. Make sure all drain plugs are unclogged.
- Never use high pressure water for cleaning. That will force water past any protection.
