

# NO MiX 'n' Match Roadwheels

Mechanics, aluminum and steel roadwheels are both used on M109-series howitzers and M992A2 ammo carriers. That's okay as long as you follow a simple rule: Each road arm must have either two steel or two aluminum roadwheels.

When it's time to replace a roadwheel, only steel ones are authorized. So if you've got one bad aluminum roadwheel, you'll have to replace both on that road arm with steel ones.

Can't tell 'em apart? The aluminum wheels, NSN 2530-00-801-6702, have 18 small rivets equally spaced around the rim. There are no rivets on the steel wheels, NSN 2530-01-310-2237.
