

AVIATION TOOL MARKING

Oops, we goofed. In PS 627, Page 39, we said don't mark NATS tools. That wasn't quite correct and was misleading.

The purpose of that article was to clarify that DA PAM 738-751, TAMMS-A, does not address marking of tools. The article was correct in that sense, but incorrect in that we should've gone a step further and said that tool marking identification is **authorized** according to AR 385-95, Para 2-2c.3 (e).

Follow AR 385-95 to mark tools

However, AR 385-95 does not spell out how to mark aviation tools for accountability. So unit commanders should establish detailed tool marking procedures that will best fit each unit to prevent FOD.

No More Airsave Vest Aspirin

ALSE folks, on Page 38 of PS 590, we listed items for crews to carry in their airsave vest. One of them, aspirin, NSN 6505-00-118-1948, has been replaced. NSN 6505-01-436-9606 will get you 20 boxes of 150 individually-wrapped acetaminophen tablets.
