

SHUTTING YOUR DOORS

Dear Editor,

If you have trouble shutting your FMTV doors, here's something to check.

There are three metric bolts that hold the door latch on to the inner side of the doors. These bolts work loose after a while, and then they fall out.

If the bolts work loose and you don't see it, then the plastic piece around the door hooking mechanism will break. The door won't shut if this happens, unless you have a screwdriver to hold the door hooking mechanism down until it hooks.

Here's the fix: Apply blue sealing compound, NSN 8030-01-014-5869, to the three bolts so they don't come out.

Hope no one has trouble shutting the doors now.

SFC Stephen Stanislav
NEARNG

Editor's note: That's an idea that'll stick! Thanks for the tip.
