

# QUESTIONS ON SMALL ARMS REPAIR

Dear Half-Mast,

We had a couple of questions about the article on Page 12 in PS 643 (Jun 06) about getting small arms help for repairs both at the unit and at the depot.

The article said that when units send in weapons to depot for repair they should requisition replacement small arms with the correct RESET project code. Should the RESET code be used for every turn-in/requisition?

Also, when is the best time to schedule a visit from the Small Arms Readiness and Evaluation Team (SARET) to inspect and repair weapons on-site?

SGT G.J.

Dear Sergeant G.J.,

Good questions. The RESET code for replacement weapons should be used only by units who have returned from deployment in Southwest Asia.

The best time to schedule a SARET visit is shortly after your unit returns from deployment and your weapons need lots of attention. Contact SARET 60 to 90 days before you return to schedule a date.

You can access the SARET POCs, schedule, and memorandum of understanding for the visits on the SARET website:

<https://aeps.ria.army.mil/aepspublic.cfm>

Log in with your CAC, AKO or AEPS password and then click on SARET in the lower right corner under GROUP HOME PAGES.
