

Dear Editor,

I read your article on the M1114's new flushing procedures on pages 10-11 of PS 655 (Jun 07). There's been a change to that information that your readers should know about. We now have a different flush kit, NSN 4130-01-549-7064.

Also, the manufacturer's compressed air inlet Schrader fitting on the flushing agent cylinder can be used with a compressed air system. To convert the flush agent cylinder inlet for use with nitrogen, you'll need a 1/4-in flare to 1/4-in male pipe half union fitting, part number A-80.
