

RUST REMOVAL MADE EASY

A little rust on the driver's hatch periscope thumbscrews can end up being a nightmare.

Those thumbscrews are supposed to make removing the periscope to install the night sight an easy task. But if they get rusty enough from rainwater and condensation, they won't move. Even worse, if you use a wrench to try to unscrew 'em, they snap off.

Then your mechanic has to drill them out before new thumbscrews can be installed. And the whole thing starts over again.

If you've got stuck thumbscrews, try spraying them with some penetrating fluid before trying to loosen them. NSN 6850-00-973-9091 brings a case of 12, 10-oz spray cans.

Once you've got the rusty thumbscrews out, get replacements with NSN 5305-01-106-7961.
