

THINK BEFORE SLIDING PYLON DOOR

Sliding the hydraulic deck pylon door forward on your Black Hawk was a no-brainer for a long time.

Things have changed. Now you must **think** before you slide. Since the installation of the SATCOM antenna on the pylon, shoving the door past the door stop on some birds is a no-no!

When the door catches on the doorstep, **stop!** Don't slide it forward any farther until you disconnect the antenna cable connector, NSN 5935-01-269-5305. If you push the door past the stop, you'll rip out the wire from the cable cannon plug. If that happens, you'll knock out the A2C2 satellite communications panel in the bird.

So the next time you head topside on your bird, pay attention to the stenciled wording on the pylon door that tells you to disconnect the antenna before sliding the pylon forward.
