

A/C FLUSHING TIP

Mechanics, you might think that flushing your M1114's A/C system with denatured alcohol will help keep you cooler in the heat. And if you're in the sandbox, you might have already tried this. That might work for the short-term, but it can hurt you in the long run.

Why is that? Denatured alcohol can dry out the O-rings. And over time, it will lead to refrigerant leaks.

So order NSN 4130-01-549-7064 to get a flushing kit, instead. Make sure you use the right flushing procedures, too. Eyeball those on-line using this link:

<https://www.us.army.mil/suite/folder/197841>

Then click on AC and select AC Flushing Procedures Digest Article ECV HMMWV to pull up the info.
