

# GREEN LIGHT FOR LIGHT BARS

Some of you told TACOM LCMC that you wanted to use IBISTEK light bars which are commercial, off-the-shelf products. You said that their high intensity discharge (HID) lamp could provide brighter light and a longer service life. Plus, the infrared (IR) illumination could improve the performance of your NVGs at night, during lights-out driving.

Well, the headshed listened to you and will now let you choose from two light bars for your HMMWVs. You'll need your commander's approval to use them, though. And your unit will have to foot the bill. These light bars and their repair parts won't be assigned NSNs.

The approved light bars are the 66" HID light bar with IR lighting system, PN 2202-100-001, and the 45" HID light bar with IR lighting system, PN 2202-200-001. The 66" light bar is 76 inches long and 8 inches wide and weighs about 40 pounds. The 45" light bar is 54 inches long and 8 inches wide and weighs 23 pounds. Both are painted desert tan or black.
