

KEEP PADS IN PLACE

The adhesive that holds the two cushioning pads, NSN 5340-01-079-3031, on each side of your tank's knee switch actuator sometimes wears out. When that happens, the pads fall off.

Not a big deal, you think? Well, those pads **do** have an important job. They keep the manual control lever from activating the switch and opening the ammo doors until the loader presses against the lever.

So keep a close eye on the pads. If they start to loosen, apply new adhesive, NSN 8040-00-880-7332, to keep 'em in place. Use dry cleaning solvent, NSN 6850-00-285-8011, to clean the old adhesive off the actuator bracket first. That allows the pads to adhere tightly.
