

**DON'T FORGET
MY BATTERY
ANALYZER!**

Dear Editor,

You published a very good article on the Hawker battery and related chargers in PS 664 (Mar 08). However, one important item was left out—the analyzer.

I was at Camp Casey, ROK, when the 2nd ID started using Hawkers. Due to a lack of analyzers, chargers, and training, there was a maintenance issue with the battery. But once all the components were together and personnel were properly trained, the battery problems dropped considerably.

I think the battery analyzer should be included whenever there's any discussion about the Hawker battery.

Battery
analyzer's
important
for Hawker
battery life
