

Mirror Makes it Easy

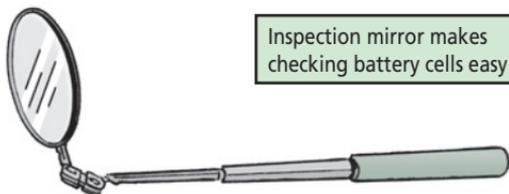

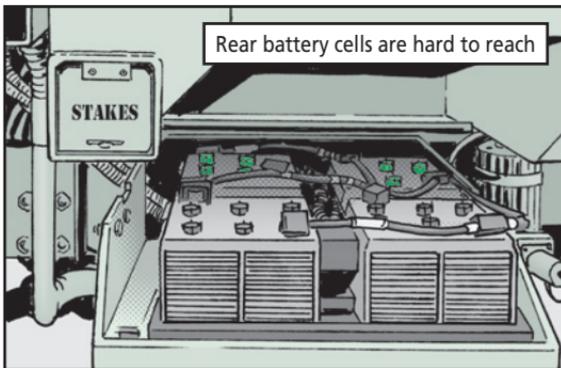

Checking the batteries on your FMTV is easy—until you get to the rear ones.

The overhang of the truck bed makes those older kind of batteries hard to reach. And when it comes to checking electrolyte levels, it's darn near impossible!

As a result, those rear battery cells are going unchecked. Pretty soon, they're dry as a bone and completely powerless.

Keep those batteries in business by investing \$4 in a small inspection mirror, NSN 5120-01-278-8257. The mirror handle telescopes up to 15 inches and includes a 2 1/2-in mirror that swivels in any direction.

Add a flashlight and checking those battery cells suddenly becomes easy. You can also use the mirror to check for battery cracks and leaks.

Inspection mirror makes checking battery cells easy
