

GOT A SCREW LOOSE?

I THINK OUR CARRIER HAS SOME SCREWS LOOSE!

YEP! AND THEY'RE THE ONES THAT HOLD THE REAR DOOR LATCHES IN PLACE!

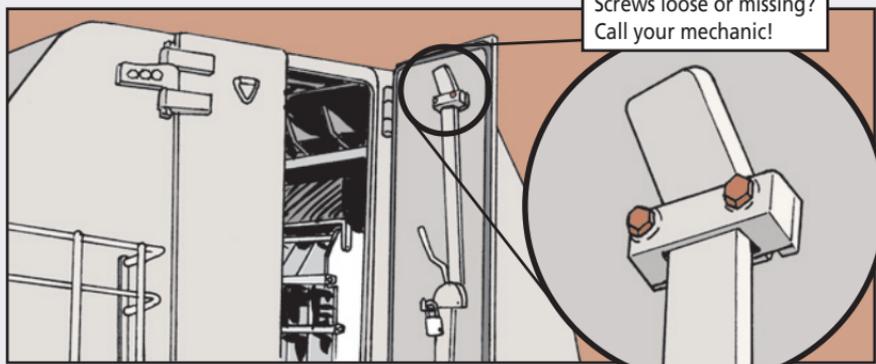

WHEN THERE'S AN EMERGENCY— LIKE A FIRE— YOU'LL WANT TO GET OUT OF YOUR AMMO CARRIER FAST.

ANY DELAY CAN MAKE THE DIFFERENCE BETWEEN LIFE AND DEATH.

That's why it pays to keep a close watch on the screws that hold the rear door latch mechanism in place.

Vibration and everyday wear and tear can loosen the screws. If they work loose, the latching bar can fall across the doors. The few extra seconds it takes to move the bar can be critical.

So take a look at the screws during PMCS. If they're loose or one is missing, notify your mechanic. He'll replace missing screws, NSN 5305-00-071-2073, and re-tighten loose ones.

Screws loose or missing?
