

OH-58D...

SO, I GOT
A LITTLE
TRIGGER
HAPPY.

CONTINUOUS FIRING OF GUN

WELL,
LOOK AT
WHAT YOUR
FUN COST
MY GUN!

HISSSS

Pilots, shooting rounds continuously from your .50-cal gun until it's empty may be fun, but when you're done your gun pays the price.

Proper operation of the gun means following the burst restrictions covered on Page 1-21 of TM 9-1090-214-23&P.

For non combat (sustained): 50 rounds per minute effective rate of fire, which means any combination of bursts not to exceed 50 rounds within a one minute period.

For non combat (maximum): 150 round burst followed by complete cooling—10 minutes.

For combat: Continuous firing is unrestricted.

Exceeding these burst restrictions will overheat the gun and lead to weapon stoppage. It can also cause a cookoff—a round in the gun going off accidentally.

IF YOU WANT
TO CONTINUE
TO SHOOT,
MOVE, AND
COMMUNICATE...

...DON'T
CONTINUALLY
SHOOT WITH
THAT TRIGGER-
HAPPY FINGER.

Follow burst restrictions for gun
