

# OPLOG Planner Replaces SB 710-2

**L**ogistics personnel, if you haven't already heard, SB 710-2, *Combat Consumption Rates for Armored and Aviation-Type Petroleum Products*, is rescinded. The consumption rates were based on engineering projections which weren't very reliable, and it hadn't been updated in more than 10 years!

So start using the Equipment User Profile (EUP), a component of OPLOG Planner, for unit-level consumption requirements. EUP's consumption rates are based on actual consumption data and will be updated annually.

You'll need an AKO account to access OPLOG Planner. It's on the following website:
