

# Keep Fan Box Door Closed

THAT'S THE SOUND OF THE FAN BOX IN YOUR BRADLEY'S TURRET WALL COMING OPEN DURING OPERATION; CREWMEN.

THE SOUND'S NOT PLEASANT, AND IT CAN LEAD TO EVEN MORE UNPLEASANT-AND EXPENSIVE-REPAIRS.

Vibration can pop open the two latches on the fan box. The door falls open and gets crunched big time when the turret is traversed. Even worse, the door can take a lot of electrical cables and connectors along with it, too.

You can put a stop to that damage by safety-wiring the latches after closing the door. The safety wire keeps the latches fastened and the door closed.

Safety wire keeps fan box door closed during operation
