

**Tip Four.** Resist the urge to use shortcuts. Don't become a cold weather casualty. Be careful not to expose skin directly to a bitter cold aircraft, POL, or tools. They can cause frostbite. If Mr. Freeze gets to you, break your maintenance task into small portions or use the buddy system where one mechanic works while the other warms up in a shelter. Make sure you are extremely careful when climbing on to or walking on top of snow or frost covered aircraft because you could slip and fall off the aircraft!

**Tip Five.** Always ground your aircraft. To beef up your knowledge on grounding, check out Page 2-11, in FM 10-67-1.
