

Mortars...

LUBE 'EM OR LOSE 'EM!

HEY,
THANKS
FOR THE
CLEANING,
BUT YOU
FORGOT TO
LUBE ME.

YOU TRYING
TO DO ME IN,
BUDDY? GIMME
SOME A' THAT
GOOD, GOOD
LUBIN'!

An Army survey of its mortars discovered that many mortars aren't being lubed like they're supposed to be. In some cases, they're not being lubed at all.

WHAT HAPPENS
WHEN A MORTAR
DOESN'T GET THE
LUBRICATION IT
NEEDS?

- Moving parts, gears, and buffer springs fail
- Bipods, pivot points and the cannon's exterior are damaged
- Service life is shortened
- Costs for repair and replacement shoot up
- Readiness plummets

You wouldn't let your car go without lubrication because you care about it. Care just as much about your mortar and give it regular lubing. Follow the lubing instructions in your -10 TM so you'll know exactly which lubes to use and where and when to put them on.
