

Use Replacement Clamp

Dear Half-Mast,

I'm with FMS #4 in Santa Rosa, CA. Our unit just received four new -A4 HEMTT tankers with the old-style ground wire clamps.

These old-style ground wire clamps are known to fall apart from rust and broken springs.

Is there a better clamp in the supply system?

SSG K.M.

Dear Sergeant K.M.,

You bet!

Order a new, durable clamp that comes with NSN 5999-00-134-5844. The new clamp is a snap to install.

Just remove the old clamp, snip off the wire eyelet if there is one, and fit the wire into the new clamp. Use a $\frac{3}{32}$ -in hex wrench from the General Mechanic's tool set to tighten the clamp's handle screws to the ground wire.
