

Tactical Vehicles...

Tire Shine is Out of Line!

If you're thinking of shining your vehicle's tires with a commercial product, think again! That's **not** authorized.

That's because it doesn't help the tires and it doesn't help camouflage your vehicle.

We know you want to protect your vehicle's tires. After all, vehicles that sit parked on hardstand in the blazing sun for weeks and months can wear out from ozone damage, heat and age. That wear can show up as cracks in the tire sidewall. When the cracks expose inner cords or belts, the tire is no longer good.
