

Glass Lenses Reminder

Operators, here's a quick reminder to keep in mind about the XM1216 Small Unmanned Ground Vehicle (SUGV).

You can't operate the SUGV properly if you can't see the micro-display because of a scratched lens on the glasses.

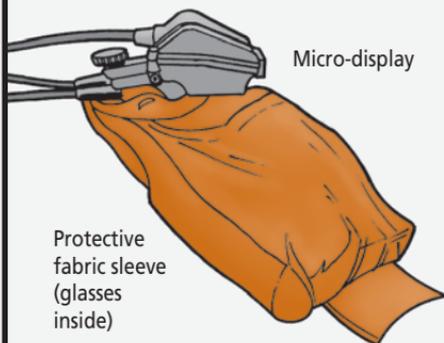

The lens gets scratched when the micro-display gets shoved into the protective fabric sleeve along with the glasses.

To store the unit properly and not scratch the lens, place the glasses inside the protective fabric sleeve with the micro-display on the **outside** of the sleeve.

Heads-up display glasses

Micro-display

If the lens gets scratched or the glasses get damaged, replace **them**, not the complete heads-up display unit. It makes the difference between 25 bucks for the lens, 93 bucks for the glasses, or 4,000 big ones for the heads-up display unit!

Here's what's available:

Item	NSN
Heads-up display unit	5855-01-590-8042
Oakley glasses (frame and lenses)	4240-01-525-3095
Oakley clear lenses	4240-01-525-7555

You'll want to make a note of these NSNs, especially the lens, until they show up in an update to TM 9-2350-397-13&P.
