

TURBINE ENGINE WASH SYSTEM

I'M TELLING
YAH, DOC...

...**SOMETHING**
IN MY
PLUMBING
JUST **DOESN'T**
FEEL RIGHT!

AHHH...
I THINK I'VE
FOUND THE
PROBLEM
HERE IN YOUR
MANUAL.

Mechanics, on Page 38 of PS 656 (Jul 07), we told you about the aviation ground support equipment (AGSE) office giving the thumbs up on using the turbine engine wash system-commercial (TEWS-C), NSN 4940-01-514-0087.

To keep your wash unit in tip-top shape with PMCS, make a note that the commercial manual can be viewed on PM AGSE's JTDI website:

<https://www.jtdi.mil>

Go to the website and login with your CAC. Then click on the AGSE tab. Under the AGSE tab, click on Maintenance, then click on TEWS-C Maintenance Manual. There you'll find the good word on maintaining your wash unit. Remember, the TEWS-C is a part of your AVUM No. 2 shop tool set.

Make a note that the majority of the parts for TEWS-C and its engine are available through the supply system. Also, keep your eyes peeled. The TEWS engine manual will be added to the JTDI website soon.
