

SUSV...

WE'D BETTER GET THE GRILLE COVERS IN PLACE BEFORE THIS SUSV GOES INTO STORAGE.

IF YOU'LL GET THE FRONT COVER, I'LL TAKE CARE OF THE REAR ONE!

KNOW WHEN TO USE GRILLE COVERS

Drivers, make sure you use the SUSV's grille covers during the off-season (after the thaw and before the first freeze).

Without the covers, mechanical and electrical components in the engine compartment can rust and corrode.

Here's what to do if you know your vehicle won't be used for **more than a week**:

- Turn the key to STOP.
- Do PMCS.
- Remove drain plugs and store them in the front door pocket.

● Install front...

...and rear grille covers.

- Disconnect the battery's ground cable. Then add a tag to the vehicle's keys as a reminder that the battery is disconnected.
- Remove the front engine hood.

If you're parking your SUSV for **a week or less**:

- Turn the key to STOP.
- Install the front and rear grille covers.

Never operate the vehicle with grille covers installed. Power train components will overheat and can cause a fire.

If your grille covers are missing, order one for the front with NSN 2540-01-309-1078. NSN 2540-01-309-1079 gets the rear cover.
