

COVER KEEPS IT CLEAN

Help your 60,000-BTU improved environmental control unit (IECU), NSN 4120-01-543-0741, withstand the elements. Order the new protective vinyl cover, NSN 4130-01-618-4810, and captured storage bag, NSN 8105-01-618-9916.

When the IECU's not in use, put the vinyl cover over the condenser fan to keep debris from collecting in the condenser (top) section. An IECU free of debris is less likely to get damaged or perform poorly. The cover also blocks rain or snow from soaking or icing components stored in the condenser section.

Before you run the IECU, fold the vinyl cover and stow it in the storage bag. The bag is attached (captured) to the side of the IECU. When you're finished running the IECU, put the cover back on.
