

Is M240C Locked in Place?

HOLD ON ONE MINUTE! MY M240C MOUNT PIN'S LOOSE!

YOU WANT ME SHOOTING ALL OVER THE PLACE?!

Dear Editor,

Getting the M240C machine gun correctly secured in the Bradley's mount can be tricky. You think the mount's front pin is locked in place, but when you fire you find it isn't. That doesn't help accuracy.

You must play with the pin to lock it in. When you think you've got it right, have the driver move the M240C up and down. If the front pin's still not secure, the M240C will have the wrong elevation. This quick check will keep your M240C on target.

Editor's note: Excellent suggestion, Sergeant. It's a good tip to target.

Order Only This M242 Barrel

SAYS HERE I GOT THREE M242 BARREL CHOICES FOR YOU!

NOPE. THAT'S OLD NEWS. I USE ONLY ONE BARREL NOW.

TM 9-1005-200-23&P (Jun 01) lists three barrel NSNs you can order for the M242 automatic gun:

- 1005-01-350-5264 (standard)
- 1005-01-088-4359 (ribbed)
- 1005-01-433-8405 (ribbed chrome)

The first two NSNs are being discontinued. Order only NSN 1005-01-433-8405 for both the standard and enhanced M242.

The next change to the -23&P will list only this barrel NSN.
