

M-ATV MRAP...

# TAKE THE CRIMP OUT OF VENT LINE

**M**echanics, the vent line on the M-ATV's rear brake chamber just doesn't cut the mustard. It's thin, flimsy and likely to crimp when put in place.

Now there's a more durable vent line kit, NSN 4710-01-313-2222, that can handle the job. The new kit includes a straight vent line tube and two connector elbows for both of the vehicle's rear brake chambers. You'll need to cut the tube to fit.
