

USE THE RIGHT BATTERY

There are no substitutions when it comes to the AN/PSQ-23/23A small tactical optical rifle mounted (STORM) battery. Use **only** the 3V 123A-style lithium battery, NSN 6135-01-351-1131.

If you sub something like the BA-5372/U 6VDC battery, you can severely damage the STORM or cause complete circuitry failure. Even worse, the wrong batteries could lead to a fire or explosion!

Never store or ship STORMs with the batteries installed. The batteries can leak and damage the STORM.

Make sure you have plenty of spare 123A batteries on hand. Your STORM won't be much good if it has no power.

For more on STORM battery installation, usage and operation, see TM 9-5855-1913-13&P and TM 9-5855-1920-13&P. For even more battery info, see TB 43-0134, *Batteries, Disposition and Disposal*.

If you have any STORM questions, contact Dennis Timmons at (586) 282-1643 or email: dennis.c.timmons.civ@mail.mil
