

Construction
Equipment...

MAN! I'M REALLY
TIRED OF HAVING TO
CHECK THESE OLD
WET-CELL BATTERIES
ALL THE TIME.

HOW 'BOUT
GETTING
ME SOME
MAINTENANCE-
FREE AGM
BATTERIES,
THEN?

SWITCH TO AGM BATTERIES

Looking to replace the wet cell batteries in your construction equipment? Maintenance-free absorbed glass mat (AGM) batteries are the way to go.

Vehicle	NSN 6140-
621B scraper	01-485-1472
D7F dozer	01-485-1472
D7R II dozer	01-457-5469 (Optima yellow-top w/threaded stud terminals)
	01-502-4973 (Optima yellow-top w/automotive terminals)
	01-502-4405 (Optima blue-top w/automotive terminals)
	01-557-6221 (Exide XRF-31E AGM-200)

The D7G dozer doesn't have an approved AGM variant. Continue using the 908D wet cell battery, NSN 6140-01-475-4243, or the 908D gel battery, NSN 6140-01-457-5280.

There is one other option: You can replace each 908D battery with two AGM batteries, **NSN 6140-01-485-1472**. The 908D battery is roughly the same size as two of these AGM batteries and they have similar cold cranking amp ratings.

NOTE: Highlighted NSNs are known readiness drivers.
