

**KEEP CONDENSER FANS CLEAR!**

**O**perators, fans on your M997A3, M1151A1, M1152A1, M1165A1, and M1167 HMMWVs need to pull in a lot of air to keep you cool. But if the protective air intake grille gets clogged, that air flow is cut back dramatically. The fans can overwork and burn out.

Protecting the fans is simple. Periodically, rinse off the dust and debris really well using a low-pressure hose. Spray the water at a downward angle to wash away dirt and debris. And make sure power to the vehicle and HVAC system is off before doing this.

Remember to use your truck's TM to perform maintenance tasks. Eyeball the general cleaning instructions provided in Table 1 of WP 0099 in TM 9-2320-387-10.
