

DON'T LET RUST HAMMER YOUR SLIDE HAMMER

Rust can do a real number on the Sentinel's slide hammer and cable reel pivot bolt. If they're left unprotected from the elements, rust starts eating them up.

Prevent that by stopping rust early. Look for rust on the slide hammer and cable reel pivot bolts during PMCS. If you spot any, rub it off with sandpaper. Then spot paint the bare spots with lusterless black paint, NSN 8010-00-066-5937.

Give the slide hammer even more protection by storing it in the truck's stowage box when you don't need it.
