

D7R II Tractor...

HEY! YOU'D BETTER BRING A HAMMER AND CHISEL TOMORROW.

THAT'S THE **ONLY** WAY YOU'LL GET ME OUT OF THIS MUD ONCE IT FREEZES!

IDLER WHEEL MUD REMOVAL MADE EASY

Leaving mud caked around the idler wheels of your D7R II dozer during cold weather, especially overnight, is just asking for trouble. Those bitter temperatures freeze the mud to the inner and outer seals on the idler wheels, causing leaks.

But there are a few things you can do to prevent that:

- Use clean water to wash out the dozer's undercarriage. Pay special attention to the idler wheels.
- Drive the dozer forward in an S-pattern for about 50 meters, then do the same in reverse. These maneuvers help remove much of the mud that sticks to the idler wheels.

- The next day, keep the dozer moving once it starts to move. That allows the idler wheel seals to warm up and redistributes the seal face load pressure.

- Park on a hard, level surface. **Never** park your dozer on a slope overnight. Besides being unsafe, it puts a strain on the roller seals and leads to leaks.
